

Maven Wireless receives call-off orders worth circa SEK 24 million

The orders include products that support public cellular bands for coverage in the Wienerwältunnel & Lainzer tunnel. The orders have been received via the company's local partner Tomek and are planned to be delivered and invoiced during April 2025.

The orders include the new product variants within the Stratus family that support 5 different frequency bands. The products primarily address the tunnel market in Europe, but can also be used in the Middle East and parts of Asia. The five frequency bands support mobile telephony for all operators on the market, including 5G on the lower frequency bands, which provides optimized coverage for tunnel coverage in particular. In addition, the product supports the complementary downlink band of 1500 MHz (SDL), which further increases the total bandwidth the system delivers and makes the Maven Wireless product unique in the DAS market.
