Afrison launches flagship LED stadium lighting project at Loftus Versfeld

White Pearl Technology Group AB ("WPTG" or the "Group") today announces that Afrison Pty Ltd ("Afrison"), the Group's South African industrial LED lighting manufacturer within its Smart Infrastructure platform, has successfully completed and launched the new LED stadium lighting system at Loftus Versfeld, one of South Africa's most iconic sporting venues. The project represents a flagship reference for the Group's Smart Infrastructure business and strengthens WPTG's position within intelligent infrastructure solutions for stadiums, public infrastructure and smart-city environments.

About the project

The new lighting system was officially commissioned during the Springboks' Test match against Scotland on 11 July 2026, where it successfully operated under live international match conditions.

The project involved the replacement of all 272 stadium floodlights with Afrison-manufactured LED luminaires, together with an intelligent lighting control system and colour show-lighting capability. The upgrade increases lighting performance from approximately 1,300 lux to 2,000 lux while significantly improving energy efficiency, operational flexibility and broadcast quality. The installation was completed in less than two months.

The project also includes a 20-year lease and service agreement under which Afrison will provide ongoing maintenance and technical support, supporting WPTG's strategy of building long-term recurring service revenues.

Strategic importance

The successful delivery of the Loftus Versfeld project provides an important reference site for WPTG's Smart Infrastructure platform and demonstrates the Group's ability to deliver integrated infrastructure solutions combining industrial manufacturing, intelligent control systems and managed services.

The project strengthens Afrison's position within stadium and smart infrastructure solutions while creating new opportunities across sports venues, public infrastructure and commercial facilities. Approximately 70% of the lighting system's components were manufactured locally in South Africa, highlighting Afrison's engineering and manufacturing capabilities.

"The successful delivery of the Loftus Versfeld project is an important milestone for both Afrison and White Pearl Technology Group. Beyond demonstrating our technical capabilities, this flagship installation provides a powerful reference that supports our continued expansion within Smart Infrastructure. As organisations increasingly invest in energy-efficient and intelligent infrastructure, we see significant opportunities to replicate this success across stadiums, public infrastructure and commercial facilities." - Ebrahim Laher, CEO of White Pearl Technology Group

"This project demonstrates that South African engineering and manufacturing can compete successfully at the highest international level. We are proud to have delivered a future-ready lighting solution that supports elite sport, world-class broadcasting and enhanced spectator experiences." - Van Rooy van den Berg, Founder and CEO of Afrison
