

Enersize receives renewed trust from leading food producer in energy efficiency project

Enersize has received a renewed order from a major Swedish food producer in the grain processing industry. The assignment involves conducting an annual leak detection audit of the customer's compressed air system, aiming to further reduce energy consumption and optimize operational costs.

The work is carried out using Enersize's proprietary platform **LEAQS**, which combines digital traceability, automated reporting, and patented methodology. This enables transparent tracking of leakage costs and corrective measures over time, providing the customer with a data-driven foundation for continuous improvement.

"We're here to save energy. And cut costs. Full stop! The fact that the customer is returning proves that we're making a real difference," says Fredrik Arrigucci, CEO of Enersize.

This assignment aligns with Enersize's strategy to expand within energy-intensive industrial sectors where sustainability and energy efficiency are business-critical priorities.

About Enersize

Enersize develops and provides specialized software, tools, and services for improving energy efficiency in industrial compressed air systems – one of the most energy-intensive processes in manufacturing. The company's technology platform enables detailed monitoring, analysis, and real-time optimization of compressed air systems, with the aim of reducing energy consumption, detecting leaks, and improving operational performance.

Enersize works with a wide range of industrial companies that recognize energy efficiency as a strategic priority – both for improving financial performance and for reducing environmental impact. The solutions are scalable and designed to integrate seamlessly into both existing and new system environments.

The company is listed on Nasdaq Stockholm First North Growth Market under the ticker: ENERS.
