
Freemelt Recruits Sales Director from Desktop Metal

Peter Jain becomes the new sales director for the expansive tech company Freemelt, working with pioneering 3D printing solutions. Peter Jain most recently came from one of the world's most acclaimed 3D printing companies - Desktop Metal, which is listed on the NYSE. There he held the position as regional manager for the European market. He also has experience from a leading position within Swedish-founded Arcam and from Mercedes Benz. Peter Jain will take a seat on Freemelt's management team in the position of sales director from 1 September.

Gothenburg-based Freemelt is a fast-growing tech company in 3D printing. The company's protected technology, in combination with an open-source solution, enables both faster and more cost-effective production than has previously been possible, as well as the development of completely new materials. On July 7, the company will be listed on Nasdaq First North Growth Market.

- We welcome Peter Jain to the team at Freemelt. He has solid experience of sales in the manufacturing industry and will be a key person on our growth journey and international expansion, says Ulric Ljungblad, CEO and founder of Freemelt.

- I chose Freemelt because the company has the most promising and exciting solution for 3D printing in metal but also for the impressive development over the past years of the company which now makes it possible to develop the 3D printer of the future already today. In addition, the company's engineers have a very high level of competence and ability to bring innovative solutions to the market, says Peter Jain and continues:

- Freemelt has a unique position in using a very fast and selective melting process to print parts with excellent material quality, which means, among other things, that the technology will in the future be able to compete in real mass markets.

About Us

Freemelt is a high-tech growth company whose ground-breaking solution creates new opportunities for rapid growth in 3D printing, also known as additive manufacturing. The Company's protected technology – which already are available – takes 3D printing to a new level and provides new opportunities for printing products in a cost-effective way and to a consistent and high quality that previously was impossible. By choosing an open source solution, the conditions are created for strong growth, and the Company will expand towards manufacturing markets, moving forward. For more information, see www.freemelt.com.
