GOODTECH TO DELIVER SCADA SYSTEM FOR HYDRO'S WIRE ROD OPERATIONS AT KARMØY

Hydro is installing a SCADA system at its new Wire Rod plant in Karmøy to ensure a safe and efficient facility geared for future growth. Goodtech has been awarded the contract to deliver the new system, continuing the companies' long-standing collaboration within industrial automation and digitalization.

"In this project we draw on both our long-standing relationship with Hydro and our expertise in industrial automation, SCADA and system integration," says Margrethe Hauge, CEO of Goodtech. "It fits well with Goodtech's strategy to enhance industrial competitiveness."

Ketil Huseby, Project Manager at Hydro:
For Hydro, this part of the Wire Rod Karmøy project is about establishing a modern and robust SCADA platform that supports safe and reliable operations while making use of common standards and experience from across our organisation. Goodtech's knowledge of our systems and operating environment has been valuable in developing the solution.

About Hydro Karmøy
Norsk Hydro is one of the world's largest aluminium companies and operates across the entire value chain, from raw material extraction to finished products. Hydro Karmøy is one of Hydro's key aluminium production sites in Norway. The site comprises primary production and downstream operations, including wire rod for industrial applications.
