

The BeammWave Patent Portfolio continue to expand

Two additional fundamental patents have now been granted in Europe, each marking the first grant within its respective patent family.

These patents provide protection for “frequency generation of a multi-antenna transceiver system” and “mmWave multiband transceiver unit and transceiver arrangement for carrier aggregation support”.

“These patents cover fundamental parts of BeammWave’s digital beamforming architecture and further strengthen our already strong patent portfolio”, says Bengt Lindoff, Chief Systems Architect at BeammWave.

About Us

BeammWave AB are experts in communication solutions for frequencies over 24GHz. The company is building a solution intended for 5G and 6G, in the form of a radio chip with antenna and associated algorithms. The company’s approach with digital beamforming is unique and patented, with the aim of delivering a solution with higher performance at a lower cost. The company’s share serie B (BEAMMW B) is listed on the Nasdaq First North Growth Market in Stockholm. Certified Adviser is Redeye AB.
