BIMobject implements operational efficiency initiative yielding 10 MSEK in annual cost savings

With a continuous focus on operational excellence, BIMobject takes the next step towards streamlining its organization. As a result, the operating cost base is expected to decrease by 10 MSEK on an annual basis, with full effect from 2027.

The efficiency stems from BIMobject bringing its products together into one unified customer offering. During 2027, customers will increasingly meet one BIMobject, with one seamless customer experience, instead of separate products. This is in line with the company's product strategy and its ambition to become the one source of truth for product information across the entire construction value chain.

"Bringing the products closer and creating a unified offering is the next step for us. No one else sits where we do. Manufacturers publish their product data with us, while architects, engineers and wholesalers come to us to use it. That gives us unique insights into what the industry actually asks for," said Niklas Agevik, CEO of BIMobject. *"Our job is to deliver the right data in the right format to the right stakeholder at the right time."*
