

QleanAir Launches QleanGuard Environmental Monitoring: A Cost-Effective, Full-System Monitoring Solution for Cleanroom Facilities

QleanAir Scandinavia Inc. is excited to announce the release of QleanGuard Environmental Monitoring in the US, a cutting-edge, standalone system designed to transform how compounding facilities monitor their data. With its real-time data tracking, diverse compatibility, and remote cloud access, QleanGuard sets a new standard in operational control and regulatory compliance at a significantly lower cost than competing systems.

Built on the powerful EZE.io architecture, QleanGuard provides facilities with inter-connected monitoring that integrates effortlessly with almost any industry-standard sensor and communicates via Modbus and BACnet protocols. This allows for quick deployment and integration with existing Building Automation Systems (BAS) without the need for complex customization.

Users can remotely access the cloud-based platform from any internet-connected device to view real-time environmental data, generate reports, and receive automated alerts when readings fall outside defined specifications. QleanGuard ensures facilities remain aligned with USP <797> and <800> standards while simplifying compliance processes.

Adding to its value, QleanGuard is fully compatible with Pharmacy Stars' Compounding360 platform, an industry leading software used by pharmacies across the US to manage compounding operations, documentation, and quality control systems.

"With QleanGuard, QleanAir is bringing a smarter, more accessible monitoring solution to compounding pharmacies," says Lucas Fernald, Product Design Engineer at QleanAir Scandinavia Inc.
