

Audiodo Personal Sound Arrives on Nothing Headphone (1)

Personalised hearing calibration becomes a defining feature across the Nothing ecosystem

27 October 2025: Audiodo are pleased to share the news of their expanding their partnership with **Nothing**, announcing that **Audiodo Personal Sound** will be coming to **Nothing Headphone (1)** via an over-the-air update rolling out globally from **27th October 2025**.

The update gives all Nothing Headphone (1) users access to **Audiodo's advanced hearing calibration technology**, available directly through the **Nothing X app**. In just minutes, listeners can complete a short in-app hearing test and create a fully personalised sound profile precisely tuned to the way they hear.

A Growing Collaboration

Audiodo Personal Sound has already become an integral feature within the **Nothing** and **CMF by Nothing** families, appearing across multiple devices including:

- **Nothing Ear (3)** – the first Nothing product to feature Audiodo built-in.
- **CMF Buds 2 Plus** – introducing personalised hearing to CMF's true wireless range.
- **CMF Headphone Pro** – extending the experience to CMF's flagship over-ear model.

With Headphone (1), that same personalised listening experience now arrives on Nothing's first full-size headphone, cementing **Audiodo Personal Sound** as a defining feature across the ecosystem.

A Growing Force in Audio

Beyond Nothing, **Audiodo's software has become an irreplaceable part of a growing number of brands worldwide**. From **Fresh 'n Rebel** to **Noble Audio**, Audiodo's sound personalisation continues to transform the way consumers experience audio across a wide range of products and price points. Several additional brand integrations are already confirmed, with more big names set to be announced soon – highlighting the increasing demand for truly personal sound.

Audiodo Personal Sound

At the core of this collaboration is **Audiodo Personal Sound** – advanced calibration software that analyses how each ear hears different frequencies and compensates for any variation. Using a short hearing test within the Nothing X app, the software builds a detailed map of the listener's hearing and applies a bespoke correction curve to optimise playback in real time. This ensures that every listener hears music as it was intended – with restored balance, enhanced clarity and accurate detail across the frequency spectrum – delivering a sound experience that's natural, immersive and completely personal.
