Mycronic receives order for an SLX mask writer

Mycronic AB (publ) has received an order for an SLX mask writer from a new SLX customer in Asia. The order value is in the range of USD 4-5 million. Delivery of the system is planned for the first quarter of 2027.

The SLX laser mask writer meets rising demand for photomasks for the semiconductor industry and a need for replacement and modernization. Photomasks manufactured by laser mask writers are of high importance and account for a majority of all photomasks produced for semiconductor manufacturing. SLX is a modern and energy efficient mask writer based on the same technology as Mycronic's mask writers for displays.

"We are pleased that the customer has chosen to place an order for an entry level SLX, in order to expand into more advanced applications within primarily advanced packaging", says Mikael Wahlsten, Sr VP Pattern Generators at Mycronic.

Mycronic's Pattern Generators division provides mask writers and metrology, inspection and repair systems for display manufacturing and production of semiconductors.
