

Klimator receives expanded order from Mesta AS – strengthens winter maintenance in Norway with smart technology in a deal worth SEK 1.5 million

The order includes the delivery and implementation of Klimator's decision support software Road Status Information (RSI) across an additional six maintenance areas, along with more than 100 IoT-based road weather stations. These technologies will be used to improve the efficiency of winter maintenance operations on several newly awarded road sections and contract areas in Norway.

Mesta is an existing customer of Klimator and has, during 2025, secured a significant number of new maintenance contracts from Fylkeskommuner, **Statens vegvesen** and **Nye Veier**. This order further expands the footprint of Klimator's solutions within Norwegian winter road operations.

*– We are proud of the continued trust from Mesta. The fact that our solutions are expanding and being integrated into their daily operations is a testament to both the maturity of our technology and the practical value it delivers, says **Søren Pedersen, Head of Winter Maintenance** at Klimator. With Road Status Information and our IoT sensors, Mesta can operate in a more data-driven manner, reduce salt usage, and simultaneously improve traffic safety.*

Deliveries will start during the summer and will be fully operational ahead of the upcoming winter season.

About Klimator

Klimator AB is a publicly listed software company with over 30 years of research in applied road climatology. Klimator has two innovations – the data platform Road Condition Data (RCD), providing predictive high precision road weather information, and the sensor fusion solution AHEAD providing real-time detective road weather information. With these innovations, Klimator provides precise and reliable road weather information to the winter maintenance and the automotive industries creating safer roads and enabling scalable autonomous driving (AD) and intelligent driver support systems (ADAS). In 2020, Klimator acquired HedeDanmark's business operations within connected sensors to broaden and strengthen Klimator's product portfolio.
