

OPTICEPT - NEW ORDER FOR FPS IN THE NETHERLANDS

OptiCept Technologies AB (publ) announces that its partner FPS Food Process Solutions (“FPS”) has secured a new order for an OPTICEPT® PEF system for a French fries production facility in the Netherlands. The project includes delivery of the largest PEF system offered by OptiCept, as a one-unit delivery, and is part of a processing line where FPS is the main supplier.

The rapid order intake represents an important accomplishment in the continued expansion of OptiCept’s PEF technology within large-scale industrial potato processing. It demonstrates strong demand for high-capacity solutions and confirms the successful collaboration between FPS and OptiCept in delivering integrated processing lines. The OptiCept value of the order will, as communicated previously, not be determined until after the installation of the equipment is complete. The installation is scheduled to be done during the first quarter 2027.

By combining OPTICEPT® with FPS advanced processing solutions, customers can achieve significant improvements in production. The technology enables increased capacity, more uniform cutting quality, reduced energy consumption, lower raw material waste, and a higher share of saleable product.

“This order confirms that our PEF technology is now being implemented not only by small and mid-sized producers but also in large-scale French fries production lines. We are now seeing an acceleration in order intake, and this is only the beginning” says Henrik Nettersand, acting CEO of OptiCept Technologies.

For FPS, the project strengthens the company’s position as a leading supplier of turnkey solutions for the global potato processing industry. For OptiCept, it provides further evidence that PEF technology is becoming a natural component of next-generation high-performance French fries production lines.

About Us

OptiCept Technologies AB (publ) provides the food and plant industry with technological solutions that contribute to a more sustainable world and enable climate-smart economic growth. OptiCept optimizes biological processes - Increased extraction from raw material, extended shelf life, reduced waste, and improved quality (taste, aroma, color, nutritional content) of the final product.

The positive effects of technology increase efficiency for our customers, provide better products for the consumers, and minimal impact on our environment. Through patented technology in PEF (pulsed electric field) and VI (Vacuum Infusion), the technology opens up new business opportunities for the food and plant industry worldwide. OptiCept's vision is to contribute to a sustainable world by offering efficient, green, cutting-edge technology that is easy to use in the areas of FoodTech and PlantTech.

The company is located in Lund and the share is traded on the Nasdaq First North Growth Market (ticker: OPTI). The Company's Certified Adviser is Tapper Partners AB.
