## 3 Scandinavia Expands 5G Footprint with Enea's Policy Control Technology

3 Scandinavia, a leading provider of voice and broadband services, has deployed Enea's 5G policy control solution as it continues to expand its 5G footprint. The solution will allow 3 Scandinavia to effectively launch, manage, and monetize new services in Sweden and Denmark. Enea's powerful policy platform will allow the Nordic network provider to differentiate services and ensure that all subscribers benefit from a consistent quality of service to match their chosen pricing plans.

Enea's policy management platform, a fully virtualized, multi-vendor solution, has provided 4G policy control functionality for 3 Scandinavia since 2008. As the operator looked to scale its capabilities with virtualized architecture, it turned to Enea for 5G policy control. Enea's platform delivers robust connectivity and cost-effective service management while bringing operational agility through its tight integration with provisioning systems. It is also vendor agnostic, which means that the operator has the freedom to work with any network access provider and can configure new types of 4G and 5G services in a matter of minutes.

"We are always striving to offer innovative services that appeal to our growing base of subscribers," says Per Stigenberg, CTO at 3 Scandinavia. "In today's world of stream-based entertainment and hybrid working, this means taking full advantage of everything 5G has to offer. Enea has demonstrated a thorough understanding of our needs and with their flexible product approach we are now able to deliver a next-generation connectivity experience for all our subscribers in Sweden and Denmark"

The solution from Enea also enables the operator to effectively manage several of its virtual Policy Control Functions (PCFs) across two physical locations in Scandinavia. With Enea's platform deployed, 3 Scandinavia can efficiently support fully redundant 5G voice and data services throughout both Sweden and Denmark, allowing the operator to seamlessly control policies as subscribers move between 4G and 5G, and across their networks.

"Policy control is very much the brains of the operation when it comes to providing cellular services to millions of subscribers," says Jonas Jacobsson, Senior Vice President of Service Provider Sales at Enea. "Without it, there is simply no way to differentiate service in terms of data allowance or speed, particularly with 5G where these configurations become even more granular."

A report from Deloitte found that the number of 5G subscribers in Scandinavia has more than doubled in the past two years. As networks grow, policy plays a critical role to help operators scale and monetize 5G.
