

Insplorion takes first order in Japan

Insplorion AB (Publ) has received an order from a Japanese distributor in the automotive industry regarding delivery of a hydrogen gas sensor NPS-P1. The order value for the initial order is approx. SEK 50,000.

The order concerns a first delivery to evaluate the sensor's ability to measure directly in the gas flow in the customer's system.

"It is a pleasure to be able to announce this deal as it is the first to Japan. The customer's application concerns measurements of vehicle emissions, an area that has become increasingly complex as the use of new fuels and hybrid vehicles grows," says CEO Johan Rask.

About Insplorion

Insplorion's vision is to use sensor technology for an accelerated transition to a sustainable future. With its unique sensor platform NanoPlasmonic Sensing (NPS), Insplorion operates within two fields; hydrogen sensors and research instruments. The hydrogen sensors enable safe and efficient deployment of hydrogen infrastructure through its unique benefits in detection speed, selectivity and ability to function in environments where many sensor technologies cannot. Our instruments give scientists around the world real time data within battery research and surface processes in fields like catalysis, material- and life science. Redeye AB is Insplorion's Certified Adviser on Nasdaq First North Growth Market.
