# GOODTECH TO DELIVER FEED FOR FRAMO'S NEW AUTOMATED PIPE FABRICATION FACILITY AT HOLSNØY

**Goodtech has signed a contract with Framo AS for the Front End Engineering Design (FEED) of Framo's new automated pipe fabrication facility at Holsnøy, Norway. The facility is planned to produce Framo's Offshore Pipe Stack product family.**

Framo is expanding its factory at Holsnøy, with more robotization and digitalization. The contract builds on a feasibility study Goodtech carried out for Framo earlier this year. During the FEED, Goodtech will develop and validate the concept for the production line, with robotic welding at its core. The aim is to reduce technical and commercial uncertainty and give Framo a robust basis for its investment decision.

The work will be carried out by a multidisciplinary Goodtech team within robotics, welding, automation and electrical engineering, in close collaboration with Framo. The FEED runs from October 2026 to January 2027.

**Margrethe Hauge, CEO of Goodtech:**
"Framo is leading the way with its exciting plans to modernise and secure a robust and efficient production. We are pleased to continue the collaboration and will work to provide Framo a solid basis for its investment decision at Holsnøy with our core expertise in providing the industry with competitiveness."

**Richard Sulen, Managing Director, Framo Flatøy:**
"The expansion at Holsnøy is about more capacity, more robotization and more digitalization in our production. Goodtech knows our needs from the feasibility study and brings experience across robotics, welding and automation. That makes them the right partner to give us a solid basis for an automated production line before we take the next investment decisions."

**About Framo**
Framo is part of Alfa Laval and launched its investments plans at Holsnøy October 2025. Its factory at Holsnøy has been emission free since 2023, after all fossil fuel was phased out. Framo is now expanding the site, starting with two new production halls of 10,000 square metres each, and will gather all its aquaculture production and future offshore expansion there.
