BioInvent International AB (publ)
Annual Report 2023

The image showcases a liquid with scattered DNA strands, symbolizing the potential of liquid biopsies in detecting early responses to immunotherapy.

Unleashing immunity to fight cancer

The natural immune system is finely balanced. It defends us against infectious disease and the early manifestations of internal invasions such as cancer.

One of the great advantages of immunotherapy is the possibility that treatments can have long-term effects. Just as vaccinations prime the body to anticipate future infections, immuno-oncology treatments not only stimulate immediate attacks on tumors, they also establish tumor-specific immunological memory.

BIOINVENT ANNUAL REPORT 2023

2023 in brief

2023 provided positive clinical readouts from three Phase 1/2 programs (BI-1808, BI-1206, and BT-001), validating the company's antibody technology. BioInvent continued to strengthen its network of important partnerships when the company was selected to participate in the Leukemia & Lymphoma Society's Therapy Acceleration Program.

PROGRESS IN OUR CLINICAL PROGRAMS

Our two lead programs, BI-1808 (TNFR2 program) and BI-1206 (FcyRIIB program), are based on carefully selected targets that have the potential to enhance the effect of widely used immune therapies, including checkpoint inhibitors and other targeted antibody agents, to improve clinical outcomes in cancer treatment.

The TNFR2 program is focused on modulating the activity of immune cells called "regulatory T cells" or "Tregs", to enable other important immune cells, called activated CD8+ cells, to expand and kill tumors. We believe this important target could represent a new class of checkpoint inhibitors. Two candidates have emerged from this program, BI-1808, in Phase 1/2 studies, and BI-1910, which started clinical studies in December 2023.

The FcyRIIB program blocks a receptor class found on tumor cells as well as on certain immune cells including macrophages. By selectively blocking this receptor, we believe that we can improve the efficacy and/or overcome resistance from targeted therapies for hematologic cancers (including rituximab) and solid tumors (including agents that target PD-1). Two candidates, in Phase 2 and Phase 1 studies, have emerged from this expansive program, BI-1206 and BI-1607.

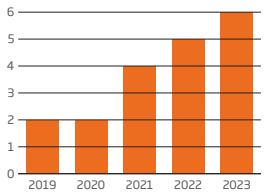
IMPORTANT COLLABORATIONS

BioInvent has a track record of effective partnerships. In January 2023, BioInvent was selected to participate in the Leukemia & Lymphoma Society's Therapy Acceleration Program. In addition to a 3 million USD strategic equity investment, this collaboration provided important intangible benefits through the expansion of our network of clinics in the U.S., enabling accelerated enrollment for two programs for BI-1206 in NHL and BI-1808 in T-cell lymphoma. As a result of Exelixis' decision to discontinue its antibody development partnership, we recently regained the rights to several exciting antibody targets, which opens another door to partnering opportunities in 2024 and beyond.

STRONG POSITION GOING FORWARD

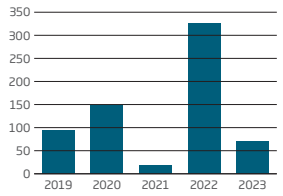
BioInvent's broad pipeline, multiple partnerships and experienced team are well supported by a strong balance sheet and a solid base of respected life science investors.

Number of programs in own clinical development



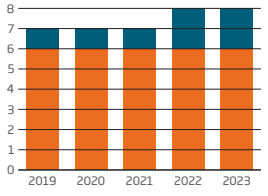
The number of programs in clinical phase has grown from two to six over the past five years.

Turnover, SEKm



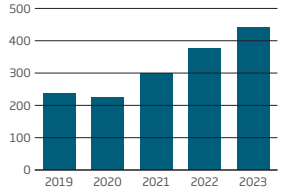
Most of BioInvent's turnover comes from milestone payments in outlicensing agreements. These revenues are irregular by nature.

Number of outlicensed projects

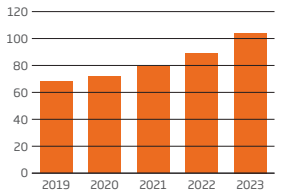


Early discovery agreements
Outlicensed projects fully run by licensees.

Research and development costs, SEKm

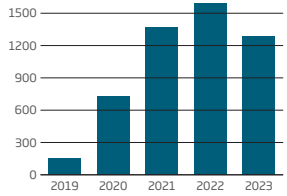


Average number of employees



The number of employees has grown over the past years to meet the demands from BioInvent's expanding portfolio.

Liquid funds, current and long-term investments, SEKm



The graph shows retention at the end of the year.

2023 overview of clinical programs

ANTI-TNFR2

BI-1808: A clinical Phase 1/2a study is ongoing, both as single-agent (Phase 2a) and in combination with Keytruda® (Phase 1). Data from the BI-1808 single agent arm of the Phase 1 study displays encouraging results in the form of early efficacy signals. Furthermore, BI-1808 exhibits a favorable safety profile with no dose-limiting toxicity observed, no maximum tolerated dose have been found. BI-1808 was well tolerated across all dose levels studied. The data strengthens the outlook for the ongoing Phase 2 part of the clinical trial and positions BI-1808 as the best-in-class.

BI-1910: A Phase 1/2a clinical trial is being conducted in the US and Europe and will use an innovative, adaptive design for dose escalation. The first phase of the trial will enroll all solid cancer entities initially as single agent, followed by a dose escalation phase with BI-1910 in combination with pembrolizumab. Subsequently, exploratory expansion cohorts are planned in hepatocellular carcinoma (HCC) and non-small cell lung cancer (NSCLC). The first patient was enrolled in December 2023.

ANTI-FCYRIIB

BI-1206 in NHL: Clinical Phase 1/2a study in NHL is ongoing. A subcutaneous (SC) formulation is being developed in parallel to the intravenous (IV) and patient recruitment to the study with BI-1206 SC as well as BI-1206 IV is ongoing. For SC, it has so far been shown that a dose of 150 mg can be safely administered. The dose is predicted to provide drug exposure at levels at which responses have already been observed IV.

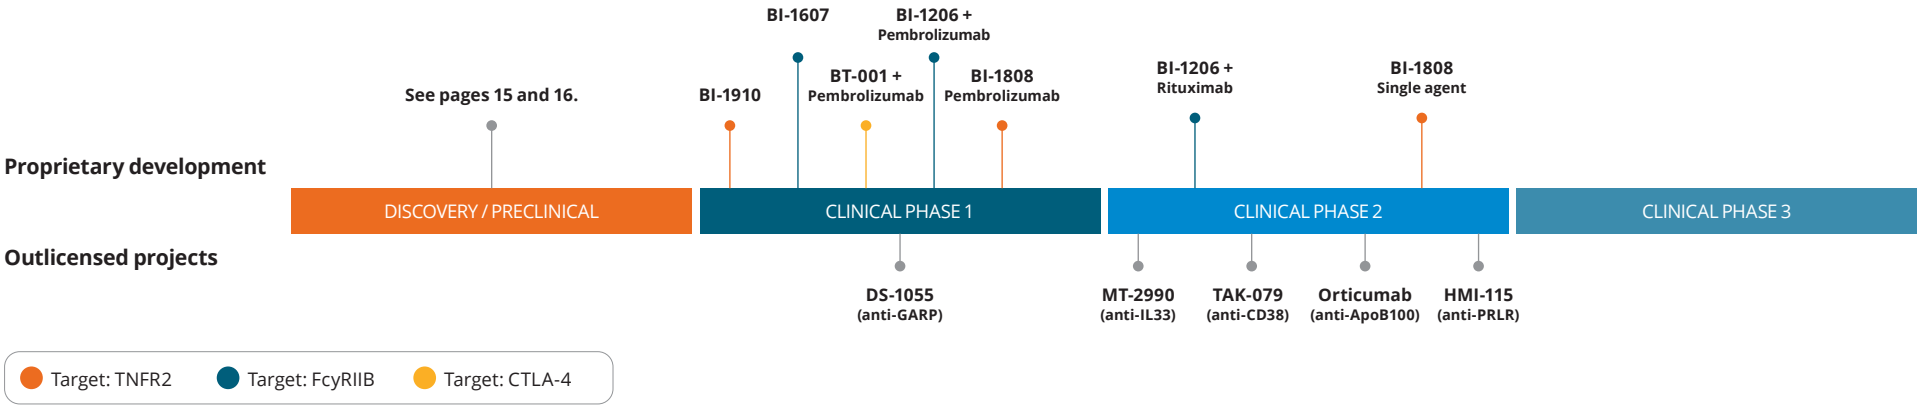
The latest data from IV part of the Phase 1/2 trial with BI-1206 in combination with rituximab in NHL (April 2023) show there are four complete responses, two beyond two years after end of treatment, and four partial responses. As anti-CD20 based therapy is expected to remain central for the treatment of NHL, BI-1206 has the potential to be uniquely positioned within NHL.

BI-1206 in solid tumors: Clinical Phase 1/2a study is recruiting patients with advanced solid tumors who had progressed on prior treatments including PD-1/PD-L1 immune checkpoint inhibitors. Patients receive a three-week cycle of BI-1206 in combination with pembrolizumab for up to two years, or until disease progression. Early signs of efficacy have already been reported, e.g., two long-lasting partial responses and two patients displaying stable disease, out of a total of 18 evaluable patients. Both responding patients have melanoma, and both had previously been treated with immune checkpoint inhibitors.

BI-1607: A Phase 1/2a trial, a first-in-human, open-label, multicenter, dose-escalation, consecutive-cohort study of BI-1607 in combination with trastuzumab in subjects with HER2+ advanced solid tumors, was reported in December 2023. The Phase 1 data covered 18 patients treated at doses ranging from 75 mg up to 900 mg flat dose. Treatment was well tolerated, and no serious adverse events related to BI-1607 were observed. The best clinical response reported has been stable disease (SD) in 6/11 evaluable patients, with disease control lasting up to 7 cycles (21 weeks).

ANTI-CTLA-4

BT-001: A clinical Phase 1/2a study is ongoing and positive progress and safety data have been reported from the Phase 1 part A study evaluating BT-001 in patients with solid tumors, including melanoma. The initial data generated in Phase 1 part A, demonstrated that BT-001 is well tolerated, with first signs of anti-tumor activity in a hard-to-treat population and confirmed the mechanism of action of BT-001 as a single agent. In October 2023, BioInvent and Transgene announced that the first patient of the Phase 1 part B clinical trial evaluating the combination of BT-001 and MSD's anti-PD-1 therapy, KEYTRUDA® (pembrolizumab) had been dosed.



Translating Science into Positive Results

2023 was a landmark year for BioInvent and our pipeline of six first-in-class clinical programs for cancer. Positive clinical readouts from three Phase 1/2 programs (BI-1808, BI-1206, and BT-001) provided important validation of our antibody technology. These data, supported by validating partnerships and a strong cash position and solid investor base, set BioInvent up to have a breakout year in 2024, fueled by expectations for substantial clinical progress across our pipeline.

TWO EXCITING LEAD PROGRAMS

Our two lead programs, BI-1808 and BI-1206, are based on carefully selected targets that have the potential to enhance the effect of widely used immune therapies, including checkpoint inhibitors and other targeted antibody agents, to improve clinical outcomes in cancer treatment.

Antibodies that help the immune system fight cancer, such as checkpoint inhibitors, have become standard of care for many solid tumor and hematologic cancers. However, durable patient responses to these therapies have been limited by resistance and the research community have had challenges to identify completely new antibody targets that work in the clinic. We believe BioInvent's pipeline of novel agents have the potential to meet the need for new immune therapies.

THE TNFR2 PROGRAM: POTENTIAL TO YIELD THE NEXT CHECKPOINT INHIBITORS

The TNFR2 program is focused on modulating the activity of immune cells called "regulatory T cells" or "Tregs", to enable other important immune cells, called activated CD8+ cells, to expand and kill tumors. We believe this important target could represent a new class of checkpoint inhibitors. Two candidates have emerged from this program, BI-1808, in Phase 1/2 studies, and BI-1910, which started clinical studies in December 2023.

BI-1808: We reported encouraging Phase 1 data from a study that evaluated several doses of the Treg blocker, BI-1808, as single agent, in 21 subjects with late-stage solid tumor cancers. The results, presented in November 2023 at an international medical conference (SITC) showed that one patient with a gastrointestinal tumor (GIST) experienced a partial response and seven patients experienced stable disease.

The well-known difficulties of showing a treatment benefit in Phase 1 oncology studies underscores the promising nature of the Phase 1 results and support further development. We progressed to the next step, evaluating BI-1808 in patients with selected solid tumor cancers including lung cancer, ovarian cancer, melanoma, and T-cell lymphomas. BI-1808 as single agent is currently being evaluated in a Phase 2a study, using a dose selected from the Phase 1 study. In addition, we initiated the Phase 1 study to evaluate BI-1808 in combination with pembrolizumab (anti-PD-1, KEYTRUDA®).

We expect to receive initial data from the Phase 1 combination study in mid-2024 and intend to report further data from the Phase 2a single agent study by the end of 2024.

BI-1910: The clinical program for BI-1910, which employs an "agonist" approach to targeting TNFR2, is following a similar plan to BI-1808. We expect to report initial Phase 1 results for BI-1910 by the end of 2024.

Martin Welschof, CEO

THE FCYRIIB PROGRAM: POTENTIAL TO IMPROVE THE EFFICACY OF TARGETED THERAPIES

The FcyRIIB program blocks a receptor class found on tumor cells as well as on certain immune cells including macrophages. By selectively blocking this receptor, we believe that we can improve the efficacy and/or overcome resistance from targeted therapies for hematologic cancers (including rituximab) and solid tumors (including agents that target PD-L1 and HER-2). Two candidates, both in Phase 1 studies, have emerged from this expansive program, BI-1206 and BI-1607.

BI-1206: Two formulations of BI-1206, for intravenous (IV, BI-1206/IV) and subcutaneous (SC, BI-1206/SC) delivery, are in development in combination with rituximab or pembrolizumab. Having two formulations is an attractive attribute of this candidate.

BI-1206/IV: In June 2023, we reported impressive long-term follow-up from the Phase 1/2a study in patients with non-Hodgkin's lymphoma (NHL) who have relapsed or are refractory to rituximab. The Phase 1 study showed that seven of fifteen patients treated in the study experienced a response, including three patients with a partial response (PR) and four patients with a durable complete response (CR, median 2.5 years). Three patients with a CR continue to respond and the fourth patient remains on treatment. Based on these promising results, we selected one dose from the Phase 1 study for expanded evaluation in a Phase 2a combination study with rituximab.

We expect to report initial Phase 2a data for BI-1206 in NHL by the end of this year. Based on the above-mentioned promising data, we also intend to study additional combinations.

Next up, we plan for a triplet combination. The agreement in early February 2024 with AstraZeneca adding Calquence® to the Phase 2a BI-1206 + rituximab study, is significantly increasing the commercial potential of the program. The aim is to provide patients with certain forms of NHL a new, efficacious, chemo-free treatment option.

We are also evaluating the combination of BI-1206 and pembrolizumab in a Phase 1/2a study in patients with solid tumors. Initial data, reported in June 2023, showed that four of eighteen patients experienced a response, including two patients with a durable PR and two patients with stable disease. Both of the patients who experienced a PR had previously progressed after prior checkpoint inhibitor treatments for melanoma.

BI-1206/SC: We have been developing BI-1206/SC in parallel, also in patients with NHL. The first studies, started in September 2023, have been designed to evaluate the activity of different dosing levels of BI-1206/SC. Enrollment is underway, and we expect to have the first results in the first half of this year. Having these data will help us to evaluate next steps, including the prioritization of our two formulations.

BI-1607: BI-1607 has demonstrated the ability to obstruct the inhibitory function of immune effector cells such as macrophages by selectively blocking a type of Fcy ("FC-Gamma") receptor (FcyR). This has the potential to improve the efficacy of targeted therapies like anti-HER-2 antibodies, which could open the door to an expansive new field of study and a substantial commercial opportunity.

Data from a Phase 1 dose ranging study, presented at the San Antonio Breast Cancer Symposium in December 2023 show that BI-1607, evaluated in combination with the anti-HER-2 antibody trastuzumab, was well tolerated. Furthermore, the study showed that BI-1607 had an attractive pharmacology profile and produced stable disease (SD) in six of eleven patients with late-stage breast cancer. These data are especially exciting because responding patients experienced disease control lasting up to 21 weeks, soundly supporting further development.

THE POWER OF PARTNERSHIP, A STRONG TEAM AND FINANCES

BioInvent has a track record of effective partnerships. In January 2023, BioInvent was selected to participate in the Leukemia & Lymphoma Society's Therapy Acceleration Program. In addition to a 3 million USD strategic equity investment, this collaboration provided important intangible benefits through the expansion of our network of clinics in the U.S., enabling accelerated enrollment for two programs for BI-1206 in NHL and BI-1808 in cutaneous T-cell lymphoma. As a result of Exelixis' decision to discontinue its antibody development partnership, we recently regained the rights to several exciting antibody targets, which opens another door to partnering opportunities in 2024 and beyond.

Securing appropriate regulatory advantages, such as Orphan Drug Designations, for our programs has been an important part of our regulatory strategy at BioInvent. In May 2023, we further strengthened our leadership team with the appointment of Ingunn Munch Lindvig, Ph.D. as Senior Vice President of Regulatory Affairs. With the acceleration of our pipeline, Dr. Lindvig's experience in product development and working with regulatory authorities will be instrumental going forward.

BioInvent's broad pipeline, multiple partnerships and experienced team are well supported by a strong balance sheet and a solid base of respected life science investors.

2024: A POTENTIAL BREAKOUT YEAR, BUILDING ON A SUCCESSFUL 2023

The promising clinical advances achieved in 2023 and our diversified portfolio of internal and partnered programs highlight our ability to translate the scientific strength of our platform into exciting product candidates that are attractive to multiple parties.

With potential clinical results from each of our six clinical programs, we believe 2024 has the makings of a breakout year. We look ahead with optimism and enthusiasm, with my sincere gratitude to the outstanding efforts and unwavering commitment of our dedicated team. Everyone at BioInvent also joins me in thanking our investors, partners and patients for their support and collaboration.

I look forward to sharing our progress with you throughout 2024.

Martin Welschof, CEO

OUR STRATEGY

DISCOVERY ENGINE

Our proprietary high-quality antibody library and experimental models deliver candidates ready for clinical development.

TOP EXPERTISE

Everything we do is based on our extensive knowledge of immunology, cancer biology, and antibody biology.

INNOVATIVE R&D

We have integrated drug development capabilities, from early discovery, manufacturing to trial excecution.

Bringing proprietary assets to profitable partnerships

BioInvent is a clinical-stage company that discovers and develops first-in-class antibodies for cancer therapy. Based on extensive knowledge in immunology, cancer biology and antibody biology, BioInvent generates innovative immuno-oncology drug candidates.

WE ARE HERE FOR A REASON

Discovering and developing antibody therapeutics that improve the treatment of cancer and create value for patients and their families as well as for shareholders and other stakeholders is what BioInvent is all about. We utilize our deep immunological and antibody-biology understanding and our proprietary screening and antibody generation platform F.I.R.S.T™ to discover and develop novel immuno-oncology antibody-based therapeutics. .

WE ARE DIFFERENT FOR A REASON

We have an integrated, rigorous, and scientifically driven approach to discovery and early preclinical development, which enables the selection of innovative and medically relevant antibody-based drugs for cancer treatment. This highly translational approach uses our proprietary screening and antibody generation platform F.I.R.S.T™ to discover both targets and antibodies. Based on our deep immunological and antibody-biology understanding we characterize the mechanisms underlying our antibodies' effects in state-of-the-art model systems to bring forward candidates with optimal characteristics.

Using this approach, we have identified several antibodies to the same target but with different mechanisms of action. Accordingly, these may be used in different treatment settings, e.g. with different combination partner drugs or in patients with different cancers or tumor microenvironments. Besides maximizing chances of success, we are convinced a holistic understanding of target biology is key to the successful development of the right drug for the right patient.

BUSINESS FOCUS

BioInvent's current operational activities are focused on:

- Progressing the clinical development of BI-1808 as monotherapy and in combination with KEYTRUDA® for the treatment of solid tumors and T-Cell Lymphomas.
- Progressing the clinical development of BI-1206 for the treatment of NHL and for the treatment of advanced solid tumors in combination with Keytruda®(pembrolizumab).
- Progressing the clinical development of BI-1607 (anti-FcγRIIB antibody) and BI-1910 (anti-TNFR2 antibody) for the treatment of solid cancers.
- Developing BT-001 in partnership with Transgene, for the treatment of solid cancers.
- Continuing development of the Company's prioritized preclinical projects.

A FULLY INTEGRATED COMPANY

BioInvent's integrated operations, including the R&D functions Preclinical Development, Clinical Development and Technical Operations, have enabled the Company to attract employees with excellent skills. Our key areas are antibody biology, antibody manufacturing, immunology, and cancer biology as well as strategic design and performance of clinical trials - all according to the highest quality standards. To secure long-term access to top expertise, and to keep the high internal engagement and dedication, we continuously perform various evaluations of the organization.

A fully integrated operation

BioInvent's main focus is to identify and develop novel, first-in-class immuno-modulatory antibodies for cancer treatment. In other words, drugs with completely new and unique mechanisms of action with the ability to strengthen, stimulate or activate the body's immune system so that cancer diseases can be combated.

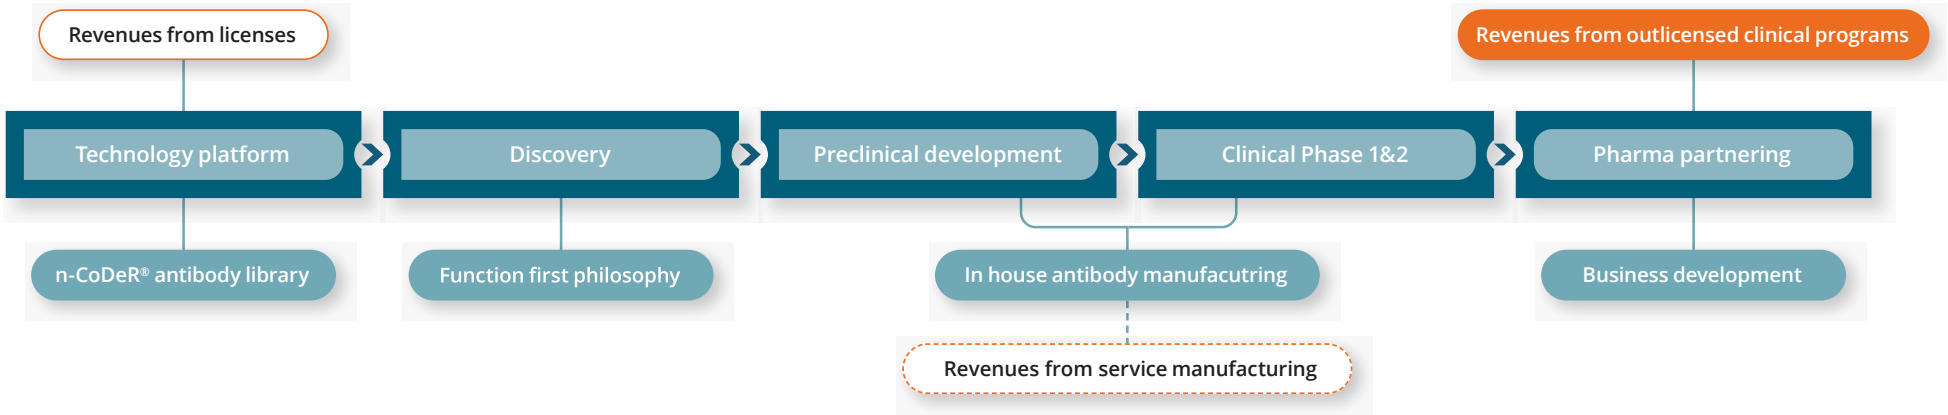
The intention is that these antibodies will improve the effectiveness of checkpoint inhibitors (the mechanisms affecting the immune system's ability to attack tumor cells), and/or to activate anti-cancer immunity in those patients who do not respond to today's treatments.

A FULLY INTEGRATED COMPANY

One of the many strengths of BioInvent is how the company has integrated research and discovery, manufacturing, and clinical development under one roof. This set-up gives us a distinct competitive advantage. Another key feature of the company is its unique technology platform, which has generated a risk diversified first-in-class candidate portfolio and which is an excellent starting point for further successful development. And thirdly, BioInvent is a leading international player when it comes to antibody biology and production. Put together, these three characteristics allows BioInvent to effectively identify and develop new drug candidates and thereby contribute to the global immuno-oncology promise.

SIX CLINICAL-STAGE PROJECTS

BioInvent has six clinical-stage projects run by the company, and another five outlicensed projects in clinical development by external parties. This achievement would not have been possible without the company's integrated organization that includes functions spanning from early discovery, through preclinical and translational studies, and where also the manufacturing of the antibodies is performed in-house. This provides flexibility and speed in the processes that few companies of our size can match. In this way, BioInvent combines the flexibility and speed of a small development phase company in terms of decision-making processes, with a large company's ability to attract the best competencies.



Unleashing the power of the immune system

BioInvent's ambition is to unleash the power of the immune system to fight cancer. Our antibodies are designed to induce cell death of primary cancer cells or to improve the immune system's capacity to eliminate tumor cells, either in combination with currently available checkpoint inhibitors or as a single agent. In our ongoing clinical trials, we are targeting liquid cancers such as non-Hodgkin's lymphoma (NHL) and solid tumors.

THE INNATE IMMUNE SYSTEM

The innate immune system has one very interesting antibody checkpoint target, FcγRIIB. Preclinical research show that many of the antibodies used in cancer treatment are regulated by Fcγ interactions. Our preclinical and clinical data suggest that the effect of these antibodies can be boosted when combined with selected antibodies from BioInvent. We currently have two clinical trials ongoing in this are with our drug candidates BI-1206 and BI-1607.

THE ADAPTIVE IMMUNE SYSTEM

The adaptive immune system is also of great interest for BioInvent. Regulatory T cells (Tregs) modulate the immune system, so it retains tolerance of the body's own antigens and avoids autoimmune responses. The immunosuppressive properties of Tregs also create ways for cancer cells to elude the body´s immune system. There is a strong correlation of the number of Tregs in cancer patients and a poor prognosis. Our drug candidates BT-001 and BI-1808 & BI-1910 target the receptors CTLA-4 and TNFR2 respectively. Both receptors are expressed on Tregs, and the idea is to use these receptors to limit the immunosuppressive properties of Tregs, and thereby creating an environment where the immune system can attack the cancer cells.

Proprietary technology platform fuels development

We have an integrated, rigorous, and scientifically driven approach to discovery and early preclinical development. This enables the selection of innovative and medically relevant antibody-based drugs for cancer treatment. Our highly translational approach uses our proprietary screening and antibody generation platform F.I.R.S.T™ to discover both targets and antibodies.

EFFECTIVE DRUG DEVELOPMENT

Based on deep immunological and antibody-biology understanding we characterize the mechanisms underlying our antibodies' effects in state-of-the-art model systems to bring forward candidates with optimal characteristics. Using this approach, we have identified several antibodies to the same target but with different mechanisms of action. Accordingly, these may be used in different treatment settings, e.g. with different combination partner drugs or in patients with different cancers or tumor microenvironments. Besides maximizing chances of success, we are convinced a holistic understanding of target biology is key to the successful development of the right drug for the right patient.

OUR TARGET DISCOVERY APPROACH:

- We use human tumor samples to identify novel targets and mechanisms of action for cancer immunotherapy.
- We use F.I.R.S.T™, our state-of-the-art screening platform including our antibody library n-CoDeR with over 30 billion human antibody genes to generate innovative antibody-based drugs
- Using in vivo and in vitro assays we choose and characterize candidate antibodies with differentiated mechanisms of action for clinical development.

BioInvent uses human tumor samples to identify novel targets and mechanisms of action. The company uses its state-of-the-art screening platform F.I.R.S.T™, including the antibody library n-CoDeR with over 30 billion human antibody genes, to generate antibodies with differentiated mechanisms of action for clinical development.

OUR SCIENCE – PROPRIETARY TECHNOLOGY

THE n-CODER® ANTIBODY LIBRARY

Our antibody library contains more than 30 billion naturally occurring human antibody genes stored within bacteria in test tubes. The bacteria act as production units for various antibodies, making it possible to scan the library with phage display technology to precisely identify those antibodies that bind to a specific target protein. Every component in the antibody library originates from nature, but the combinations are largely new, which has made it possible for us to build an antibody repertoire that is even greater than nature's own variability.

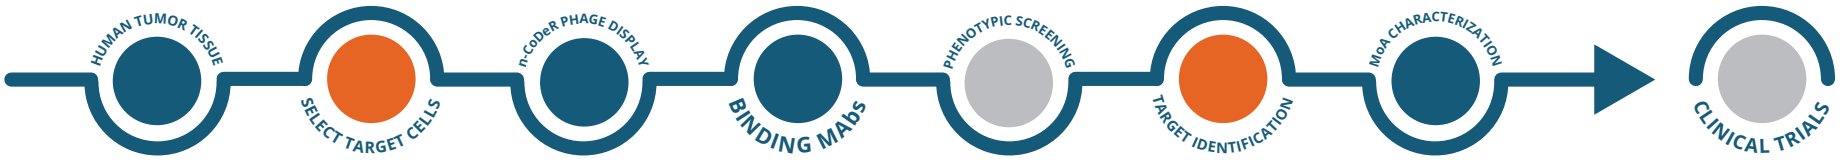
THE SCREENING PLATFORM F.I.R.S.T™

BioInvent's patented screening tool F.I.R.S.T™ is a technical process which is used for drug development, both for in-house development and for external R&D partnerships.

The platform is patient-centric and facilitates the development of new antibody therapies, as new drug candidates can be produced without detailed knowledge of the antibodies' target proteins. This unique method has the advantage of both identifying antibodies with the strongest functional activity and the disease-associated targets they bind to, i.e. antibodies and targets with the greatest therapeutic potential.

FUNCTION F.I.R.S.T DISCOVERY OF NEW ONCOLOGY TARGETS AND ANTIBODIES

Unique proprietary platform and deep immunology expertise yield both unique targets and high-quality antibodies.



Our approach contrasts with the more commonly used target-focused approach, where a target is picked on beforehand and consequently, functionality is restricted to this specified target. BioInvent applies a function-first approach, meaning it discovers the most functional antibodies to unknown targets, which can then be identified in a subsequent step. As such, BioInvent's approach discovers highly efficacious antibodies to targets that have not previously been pursued in cancer immunotherapy, as well as uniquely functional antibodies to validated targets. This is exemplified in, e.g., the company's BI-1808 first-in-class anti-TNFR2 antibody and the strongly Treg-depleting anti-CTLA-4 antibody that has been vectorized in the BT-001 program.

Two voices on BioInvent's proprietary technology

Jenny Mattsson

"I'm involved in the early phase of drug discovery where we identify a panel of antibodies and test these to find the most promising therapeutic candidates. Part of my responsibility is developing and optimizing methods used in our phenotypic antibody discovery platform F.I.R.S.T™, where antibodies with interesting functional activity are isolated without prior knowledge of their actual protein targets. This enables the discovery of therapeutic antibodies against novel targets that can complement current treatment strategies and ultimately lead to better patient outcomes. One of the main challenges is to enable the discovery of antibodies to a broad range of antigens, maximizing the diversity of antibodies to include in functional testing."

Jenny Mattsson, Principal Scientist, Preclinical Research

"I am part of the Research Department and support all projects with custom designed cell lines, target identification and technical platform development. I can provide help in all preclinical stages of antibody development, starting from antibody selection, screening and binding analysis, followed by target identification of F.I.R.S.T™ antibodies, and generating cell lines and primary cells for mode of action analysis of the antibody-target biology."

David Ermert, Senior Research Scientist

David Ermert

Niyaz Yoosuf

Discovery – the first step towards a new drug

Phage display is an established technique with uses that include finding antibodies for various types of targets. BioInvent's F.I.R.S.T™ screening tool was created by supplementing phage display and functional (so-called phenotypic) screening with new techniques. This creates great opportunities for finding many more relevant antibodies than previously.

Antibody drugs are the fastest growing type of drugs and are already used today to treat a range of different diseases, including cancer. However, few new types of antibody drugs are being discovered. One way to find antibodies for drugs is to use phage display to search through a huge library often containing more than 20 billion different antibodies. To then find the individual antibody that works best requires a lot of work.

"BioInvent is a pioneer in translational research from target identification to evaluating the efficacy and safety of novel drugs in clinical trials. With five drug candidates in six clinical trials and a strong leadership team, it is an exciting time to be a part of this wonderful journey."

Niyaz Yoosuf, Director Computational Biology

Traditionally, the work is carried out according to a hypothesis in which first a receptor is found that is believed to be suitable for antibody drugs. The search then begins for antibodies that bind to this receptor. However, by combining new techniques, looking simultaneously for both antibodies and the receptors they bind to, it is possible to find many more functioning antibodies than previously.

What BioInvent does is finding antibodies against large amounts of different receptors on the cell and look at these antibodies' function directly. The strategy is to test how the antibodies work without any prior assumptions; for example, whether it can kill a tumor cell. Once we have identified which antibodies work, various tests are carried out to determine which receptor they bind to. By doing this, we have identified antibodies that have particularly strong antitumor activity and bind to new cancer immunotherapy targets, or that bind to validated targets but have particularly strong activity through a differentiated mechanism of action.

The functionally led process of looking for antibodies and targets simultaneously, rather than first finding a target and then looking for a suitable antibody is central in BioInvent's F.I.R.S.T™ platform. It is this strategy, combined with new techniques, that is enabling many more antibodies to be found than before.

This method will be important for the development of future antibody drugs that can be used to treat many different diseases.

BioInvent has all the tools for preclinical development

BioInvent's preclinical research is focused on developing novel immuno-modulatory antibodies for cancer therapy. Such antibodies may significantly improve efficacy of currently available checkpoint inhibitor therapies and/or activate anti-cancer immunity in currently non-responding patients and cancer types.

The Preclinical Team at BioInvent is highly involved in all steps in a project – from idea to extracting desired antibodies from our n-CoDeR® library, functionally test these in predictive cancer models, as well as in developing biomarkers for the clinic. The flexibility of the Preclinical and Translational teams and the close communication with Clinical Development assure rapid adjustments to answer the most critical questions to advance our pipeline.

The strength of the company's technology platform with its development tool F.I.R.S.T™ and the n-CoDeR® antibody library is a strong driver in the discovery phase where the company currently is working on a number of promising candidates.

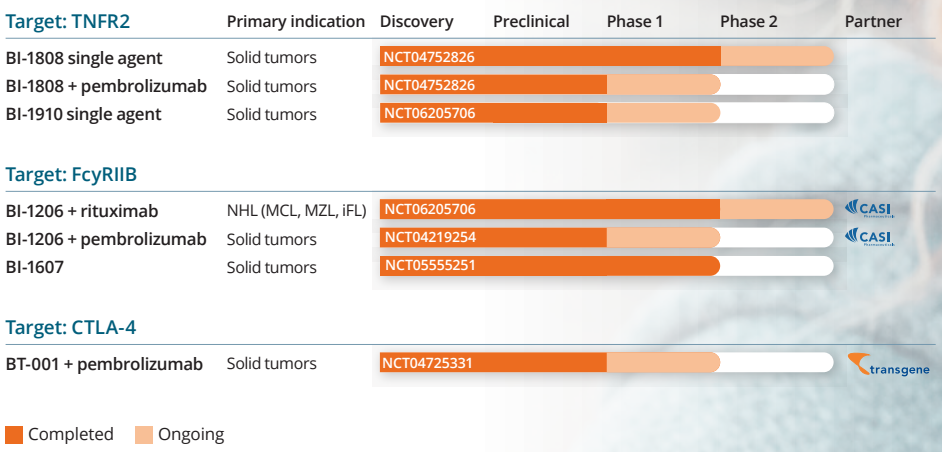
The preclinical and translational teams consist of dedicated researchers at all levels, many with relevant doctoral degrees. All laboratory work is carried out in accordance with GSP (Good Scientific Practice) at BioInvent's inhouse facilities.

"The road for a drug candidate seldom seems straight. Once a drug candidate is used in the clinic, there is always a need to go back to preclinical data to explain experiences in the clinical trial subjects. The main challenge is to find patterns of biomarkers that explain more or less successful treatment. I work in a truly great team. The colleagues at BioInvent are the best. The atmosphere is helpful and joyful, and we take good care of each other. The company is growing fast but still has the feeling of a small place where everyone helps out where needed."

Marie Borggren, Senior Research Scientist, Translational Research

Five drug candidates in six clinical studies

BioInvent is focused on developing novel immuno-modulatory antibodies for cancer therapy. These innovative antibodies may significantly improve the efficacy of currently available checkpoint inhibitor and/or activate anti-cancer immunity in currently non-responding patients.



BioInvent maximizes the chances of success and the patient populations we can treat, by choosing two drug candidates with different mechanisms of action against a novel target. Understanding the biology of the target is of the essence, and an area where the company excels.

Two voices on BioInvent's clinical development

"I am working as Senior Clinical Project Manager in the Clinical Development department. My role is mainly to ensure the clinical trial programs (BI-1206 and BI-1808) are developed with quality, budget, scope and progressing as per timelines for them to be submitted for future marketing approvals. This requires a lot of flexibility, co-ordination, cooperation and planning such as internal cross functional liaison as well as with the vendors and collaborators."

Susanne Gertsson, Sr. Clinical Project Manager

"As a clinical pharmacologist at BioInvent, I'm working with predicting what will happen when drug candidates are taken into first-in-human trials. I'm also part of designing the clinical trials, to make sure we get the most information possible out of these to find out if and how the drugs actually work in patients. Clinical pharmacology is really about the right dose to the right patient. Doing this in cancer patients is a challenge. You have to consider that they perhaps have only few or no other treatment options left, and any procedures have to be meaningful and provide value."

Johan Wallin, Director Clinical Pharmacology

Susanne Gertsson

Johan Wallin

An overview of BioInvent's targets and clinical programs

BioInvent maximizes the chances of success by choosing two drug candidates with different mechanisms of action aimed at a novel target specifically chosen for its antitumoral potential.

The targets are identified in human tumoral tissue, and the effect of the drug candidates are tested in the same tissue already before moving into preclinical development.

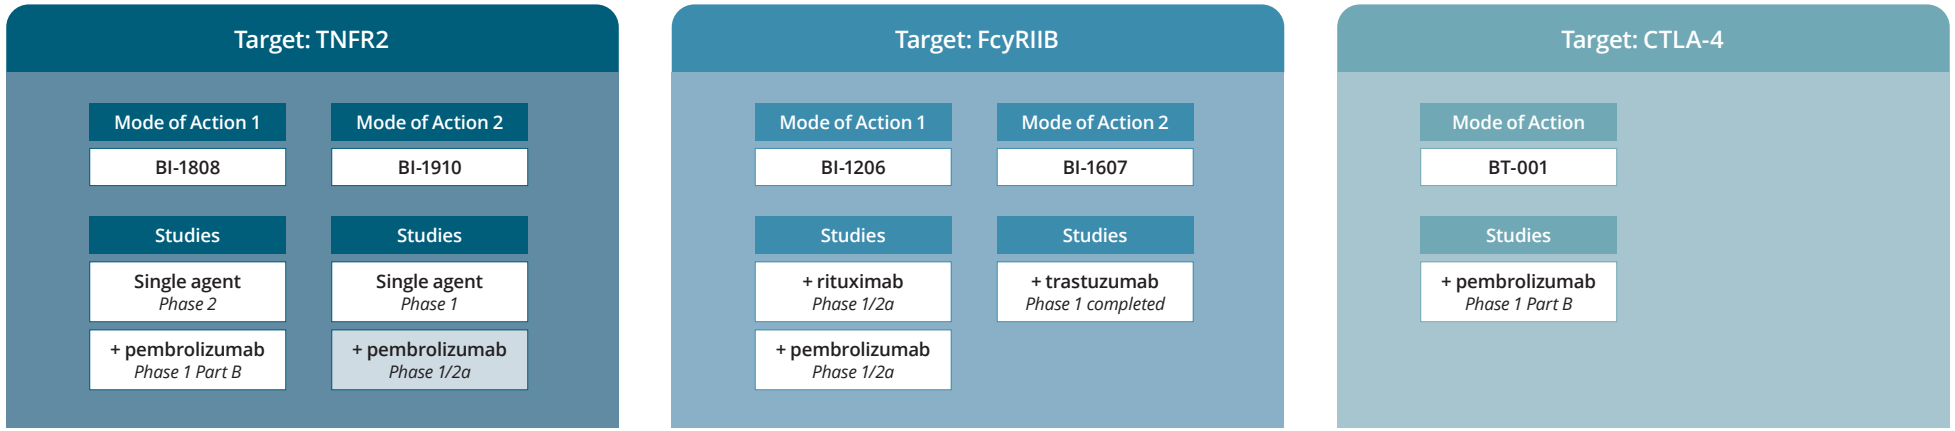
Each candidate has distinct development programs and strategies. Clinical trials are performed in either in combination with existing antibody treatments with the aim to improve or restore efficacy or as single agent trials to demonstrate the effect as monotherapy.

BioInvent's current clinical portfolio is positioned to investigate the potential of three promising targets: TNFR2, FcyRIIB, and CTLA-4.

TARGET: TNFR2
Tumor necrosis factor receptor-2 (TNFR2) affects tumor development and metastasis and has been shown to be important for tumor expansion and survival, representing a new and promising target for cancer immunotherapy. BioInvent currently runs two clinical development programs in the TNFR2 space: BI-1808 (single agent and in combination with pembrolizumab), and BI-1910 (single agent, combination with pembrolizumab to follow).

TARGET: FCYRIIB
FcyRIIB (CD32B) is the only inhibitory member of the FcyR family of receptors. FcyRs are a family of receptors that bind IgG antibodies and can elicit activating or inhibitory functions. Engagement of these receptors drives antibody effector functions, including antibody-dependent cellular cytotoxicity (ADCC) and/or antibody-dependent cellular phagocytosis (ADCP), antigen presentation and the release of chemokines and cytokines.

TARGET: CTLA-4
Cytotoxic T lymphocyte-associated protein-4 (CTLA-4) is an essential immune molecule that plays a vital role in cell cycle modulation, regulation of T cell proliferation, and cytokine production. This molecule is classically expressed by stimulated T cells. Inhibition of overexpression of immune checkpoints such as CTLA-4 receptors has been confirmed as an effective strategy for cancer treatment. The anti-CTLA-4 drug ipilimumab was the first approved immune checkpoint inhibitor receiving FDA approval (2011) for the treatment of cancer, but it is still hampered by its toxicity profile.



BI-1808

BioInvent's anti-TNFR2 antibody BI-1808 is a first-in-class drug candidate in clinical development under the Leukemia & Lymphoma Society's Therapy Acceleration Program® (LLS TAP). LLS TAP is aimed at supporting and accelerating the advancement of the most promising and innovative blood cancer therapies worldwide. BI-1808 is currently evaluated both as a single agent in Phase 2 and in combination with pembrolizumab in Phase 1.

BI-1808 AS SINGLE AGENT

Positive interim results from the Phase 1 part show early signs of efficacy and a strong safety profile. BI-1808 administered as single agent induced a robust partial response (PR) in a patient with a gastrointestinal tumor (GIST) who had received 12 previous lines of treatment. This patient is still receiving BI-1808 treatment, and a recent scan showed a 59% reduced tumor burden. Another patient, with lung cancer, also experienced a partial response but had to be taken off study due to an unrelated reason.

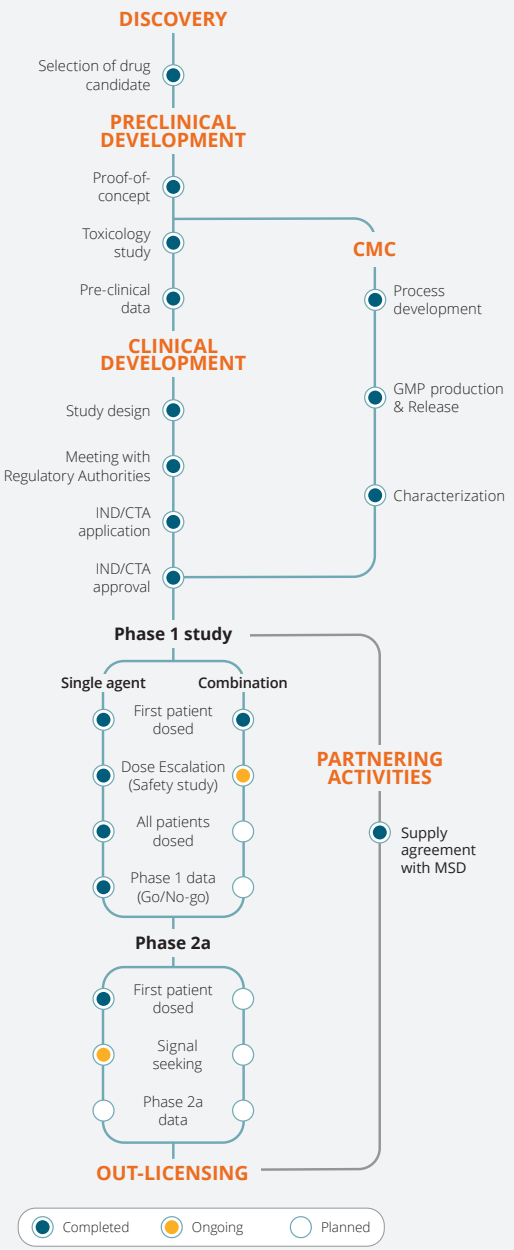
There are a further 7 cases of stable disease out of 21 evaluable patients and pharmacokinetic/ pharmacodynamic data has enabled identification of a wide dose range where complete target coverage can be achieved with a strong safety profile.

The efficacy of BI-1808 as single agent is further explored in an ongoing Phase 2a trial in a larger sample of patients. Driven by the exciting data observed so far, BioInvent has enlarged the scope of the signal seeking cohorts to include new cohorts in melanoma and other forms of T cell lymphomas as an addition to the originally planned expansion cohorts in lung cancer, ovarian cancer, and cutaneous T cell lymphoma (CTCL).

BI-1808 + PEMBROLIZUMAB

The ongoing Phase 1 Part B is exploring the safety and tolerability of BI-1808 in combination with pembrolizumab. Initial data from the combination study are expected mid-2024.

Target: TNFR2
Mode of Action 1: BI-1808



BI-1910

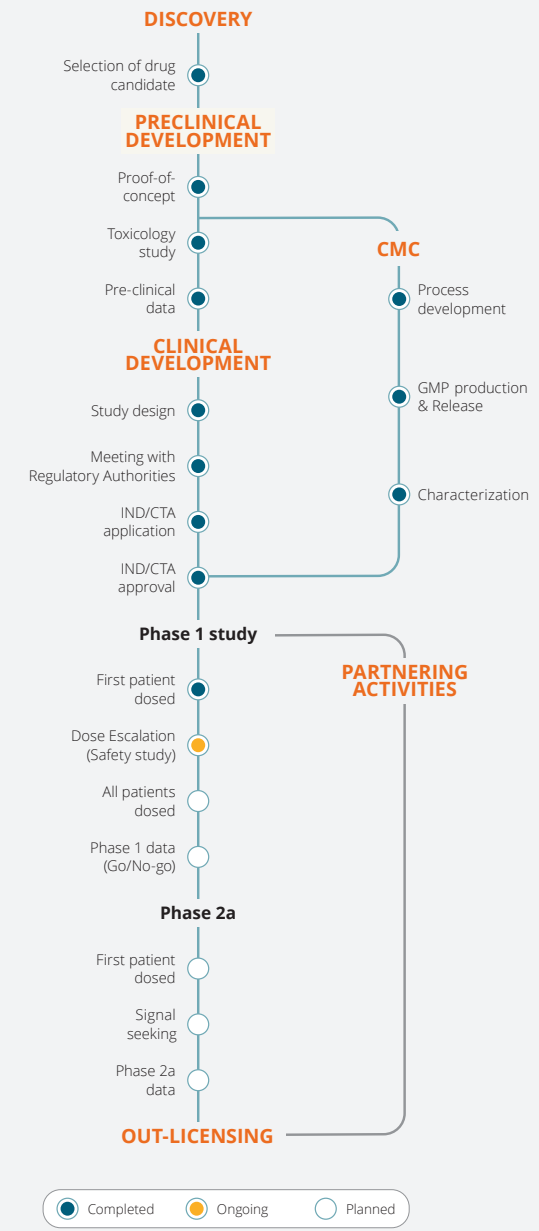
BI-1910 offers a differentiated, agonist approach to cancer treatment compared to BI-1808, BioInvent's first-in-class anti-TNFR2 antibody currently in a Phase 1/2a trial. Both monoclonal antibodies were chosen as potential best-in-class, from a large family of binders generated through BioInvent's proprietary F.I.R.S.T™ technology platform.

The ongoing Phase 1/2a clinical trial, conducted in the US and Europe, is using an innovative, adaptive design for dose escalation. The first phase of the trial will enroll all solid cancer entities as single agent, followed by a dose escalation phase with BI-1910 in combination with pembrolizumab. Subsequently, exploratory expansion cohorts are planned in hepatocellular carcinoma (HCC) and non-small cell lung cancer (NSCLC). The first patient was enrolled in December 2023.

During the first part of Phase 1/2a study the safety, tolerability, and potential signs of efficacy of BI-1910 as a single agent are evaluated in patients with advanced solid tumors. In the subsequent part of the Phase 1/2a study, BI-1910 as single-agent (Part A) and in combination (Part B) with the anti-PD-1 therapy pembrolizumab will be evaluated. The study is expected to enroll a total of approximately 180 patients.

At the scientific congress SITC (Society for Immunotherapy of Cancer) in November 2023, a poster entitled "Preclinical development of an agonistic anti-TNFR2 antibody (BI-1910) for cancer immunotherapy" was presented. The results demonstrated that BI-1910 has broad anti-tumor activity, activating T cells and natural killer (NK) cells and showing antitumor activity independent of Fc gamma receptor (FcyR) expression.

Target: TNFR2
Mode of Action 2: BI-1910



BI-1206

BI-1206 is developed to re-establish the clinical effect of existing cancer treatments such as pembrolizumab and rituximab, drugs with combined global sales of approximately USD 23 billion annually.

BI-1206 + RITUXIMAB IN NHL

FcyRIIB is overexpressed in several forms of NHL and overexpression has been associated with poor prognosis in difficult-to-treat forms of NHL, such as mantle cell lymphoma. By blocking the receptor FcyRIIB on tumor cells, BI-1206 is expected to recover and enhance the activity of rituximab, or other anti-CD20 monoclonal antibodies, in the treatment of several forms of NHL. The combination of the two drugs could provide a new and important option for patients suffering from NHL and represents a substantial commercial opportunity.

All patients in the Phase 1/2a study have previously been treated with one or more rituximab containing treatments. In the intravenous (IV) Phase 1 part, responses have been observed across the dose range of 30-100 mg, including 4 complete responders (CR), 3 partial responders (PR) and 4 cases of stable disease (SD) out of 15 evaluable patients (June 2023).

Among the CR population, responses have been long-lasting, three of them lasting years after end of treatment, while the 4th is still on treatment. As of June 2023, the median duration of complete response was 2.5 years, with three patients still ongoing. No maximum tolerated dose has been defined, and Phase 2a dose IV expansion cohort is currently enrolling patients.

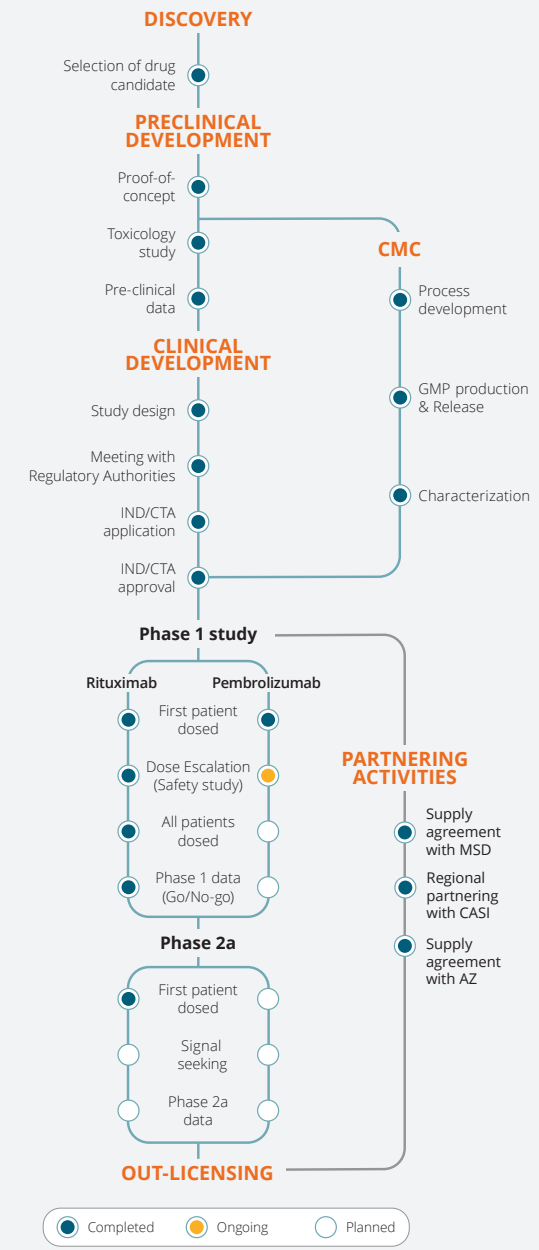
In March 2024, BioInvent's partner CASI Pharmaceuticals announced preliminary encouraging efficacy data for BI-1206 in combination with rituximab in patients with relapsed/refractory (R/R) indolent Non-Hodgkin's Lymphoma (iNHL) in the ongoing development program in China. The Phase 1 dose-escalation study showed impressive signs of clinical efficacy, with 4 partial responses (PR) and 1 complete response (CR) out of 8 evaluable patients. Among the responders in the study being conducted in China, one patient with relapsed Marginal Zone Lymphoma (MZL) patient who achieved CR has maintained a durable complete remission for 20+ weeks.

In February 2024, BioInvent signed a supply agreement with AstraZeneca to evaluate BI-1206 in combination with rituximab and Calquence® (acalabrutinib), in a Phase 1/2a study.

BI-1206 + PEMBROLIZUMAB IN SOLID TUMORS

An ongoing Phase 1/2a trial is recruiting patients with advanced solid tumors who had progressed after prior treatments including PD-1/PD-L1 immune checkpoint inhibitors. As reported in June 2023, the study has already generated early signs of efficacy, e.g., two partial responses and two patients displaying stable disease, out of a total of 18 evaluable patients having received BI-1206+pembrolizumab.

Target: FcyRIIB
Mode of Action 1: BI-1206

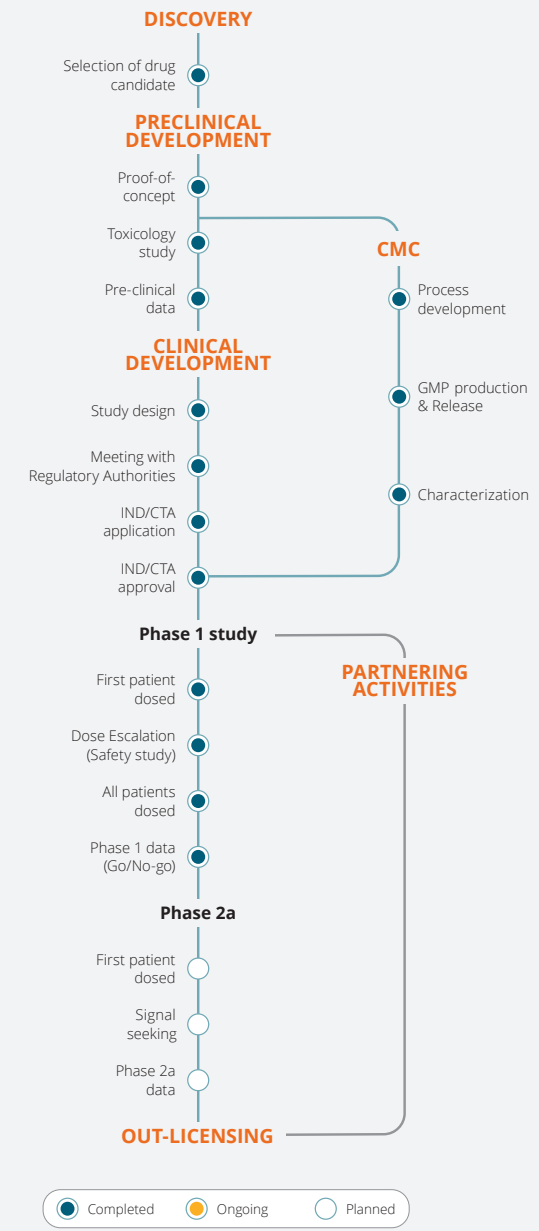


BI-1607

Like BioInvent's lead anti-FcyRIIB antibody BI-1206, BI-1607 is intended to enhance efficacy and overcome resistance to existing cancer treatments such as trastuzumab. BI-1607 is an FcyRIIB-blocking antibody that differs from BI-1206 in that it has been engineered for reduced Fc-binding to FcyRs.

The Phase 1 trial covered 18 patients treated at doses ranging from 75 mg up to 900 mg flat dose. Treatment was well tolerated, and no serious adverse events related to BI-1607 were observed. The best clinical response reported was stable disease (SD) in 4/11 evaluable patients, with disease control lasting up to 7 cycles (21 weeks). To date two additional SDs have been observed, adding to 6/11 evaluable patients. Pharmacokinetic and pharmacodynamic data allowed identification of a wide dose range, where complete target engagement throughout a 3-week dose interval can be achieved, and this will provide the basis for further investigation in a Phase 2a trial, which planned to start 2024.

Target: FcyRIIB
Mode of Action 2: BI-1607



BT-001

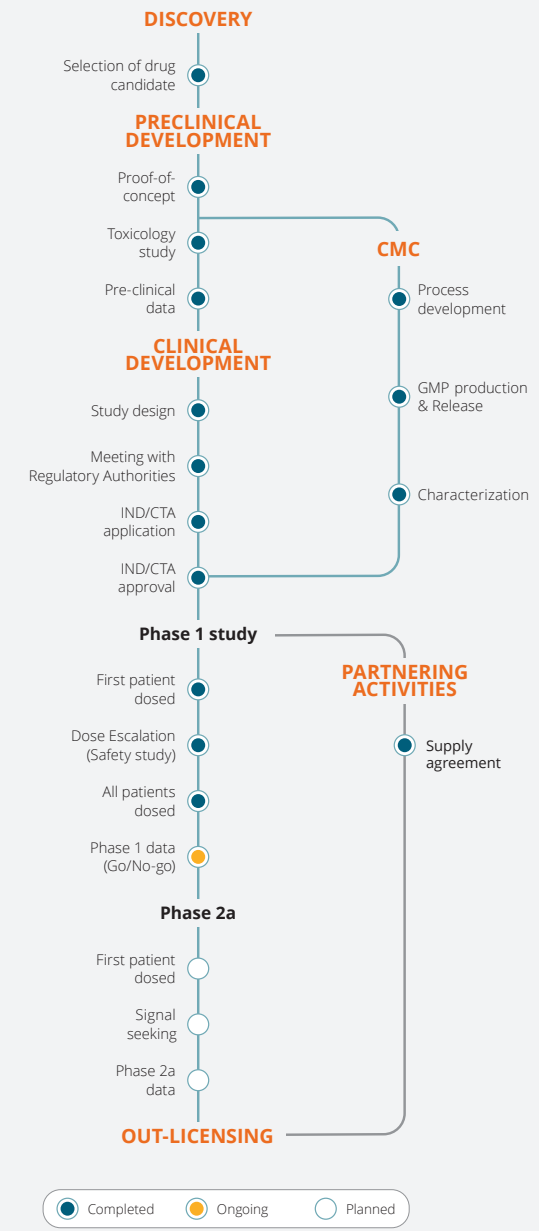
BT-001 is an oncolytic virus armed with BioInvent's anti-CTLA-4 antibody. When the virus is infecting the tumor cells it releases the anti-CTLA-4 locally in the tumor to decrease the risk for systemic side-effects. It is currently evaluated in a clinical Phase 1/2a study. BT-001 is a drug candidate being developed in collaboration with the French biotech company Transgene.

Data generated in Phase 1 part A, demonstrated that BT-001 as single agent is well tolerated with first signs of anti-tumor activity in a hard-to-treat population and confirmed the mechanism of action of BT-001.

Treatment with single agent BT-001 in 18 patients was completed with no safety concerns reported. Patients had at least one accessible superficial lesion and were studied in three dose-escalating cohorts. Objective antitumor activity, defined as decrease of injected lesion size of 50% or more, was observed in two patients.

The ongoing Phase 1 Part B of the trial explores repeated intra-tumoral injections of BT-001 in combination with intravenous infusions of pembrolizumab (KEYTRUDA®). BioInvent and Transgene plan to enroll at least 12 patients with metastatic or advanced solid tumors, including melanoma. In accordance with our clinical trial and supply agreement, KEYTRUDA® is being supplied by MSD (a tradename of Merck & Co., Inc., Rahway, NJ, USA). Trial endpoints include safety, evaluation of efficacy, and assessment of immune changes in the tumor microenvironment.

Target: CTLA-4
Mode of Action: BT-001



Vasu Sah

Successful collaborations build the future

BioInvent is a collaborative company with a long history of fruitful academic and industry partnerships. We are open to collaborating with science-driven organizations with complementary resources and expertise. Our strategic collaborations span research, development, product licenses, as well as commercial partnerships.

Business development supports the organization with crafting partnering strategies, building competitive intelligence frameworks, nurturing long-term relationships, implementing transactions of varying degrees of complexity, and managing existing alliances.

BioInvent aims to establish development and commercial partnerships for our clinical assets with world-class pharmaceutical companies. While success in the clinic is usually a prerequisite for establishing such partnerships, our world-class science and expertise in identifying and developing first-in-class cancer therapeutics sets BioInvent apart from many of our peers. Our recognized world-class expertise has also attracted research partnerships with global pharmaceutical companies, as well as supply agreements to access successful commercial drugs for our combination trials. Each of our partnerships is a unique opportunity to showcase our technologies and programs and enable our scientists to interact with high quality research and development groups worldwide.

Working with some of the best academic groups in the world allows us to expand our scientific expertise and capabilities to advance our early programs and to acquire high quality early assets for further development.

"Competitive Intelligence allows us to understand the world around us by tracking research, development, and commercial activities that are relevant to our programs. We use data analysis, analytics, and strategic intelligence to support evidence-based and flexible decision-making for the development of our products. It empowers us by transforming data into actionable insights, identifying new opportunities, mitigating risks, ensuring a competitive positioning in the market."

Vasu Sah, Manager Competitive Intelligence and Business Development

While BioInvent's GMP manufacturing facility is a key asset to allow us to advance our clinical programs quickly and in a cost-efficient way, extra capacity allows us to manufacture and sell antibodies to a select group of external parties.

BioInvent currently has five outlicensed projects in clinical development by our licensees.

Our outlicensed drug candidates entitle us to significant development milestone payments as well as royalties on potential future sales.

SELECTED AS PARTNER OF LLS TAP

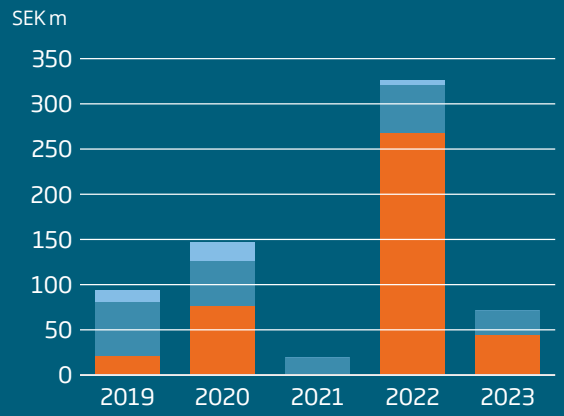
In January 2023, BioInvent was selected as partner of The Leukemia & Lymphoma Society's Therapy Acceleration Program® (LLS TAP) and received a strategic equity investment of USD 3 million aimed at advancing BioInvent's work to treat blood cancers. LLS TAP is a strategic funding initiative to accelerate innovative blood cancer therapeutics worldwide.

LLS has dedicated more than USD 100 million over the past several decades, through both grants and TAP investments, to advancing pioneering approaches that harness cellular immunotherapies to fight blood cancers. This investment is aimed at supporting the work of BioInvent with the advancement of its novel anti-FcγRIIB antibody BI-1206, in Non-Hodgkin's Lymphoma (NHL) and the anti-TNFR2 antibody BI-1808 in cutaneous T-cell lymphoma (CTCL).

SUPPLY AGREEMENTS WITH MSD

BioInvent has three supply agreements with MSD under which they will provide pembrolizumab to be used in combination with BioInvent's candidate drugs BI-1206, BI-1808 and BT-001.

REVENUES 2019 - 2023



REVENUES FROM OUTLICENSING OF PROPRIETARY PROJECTS

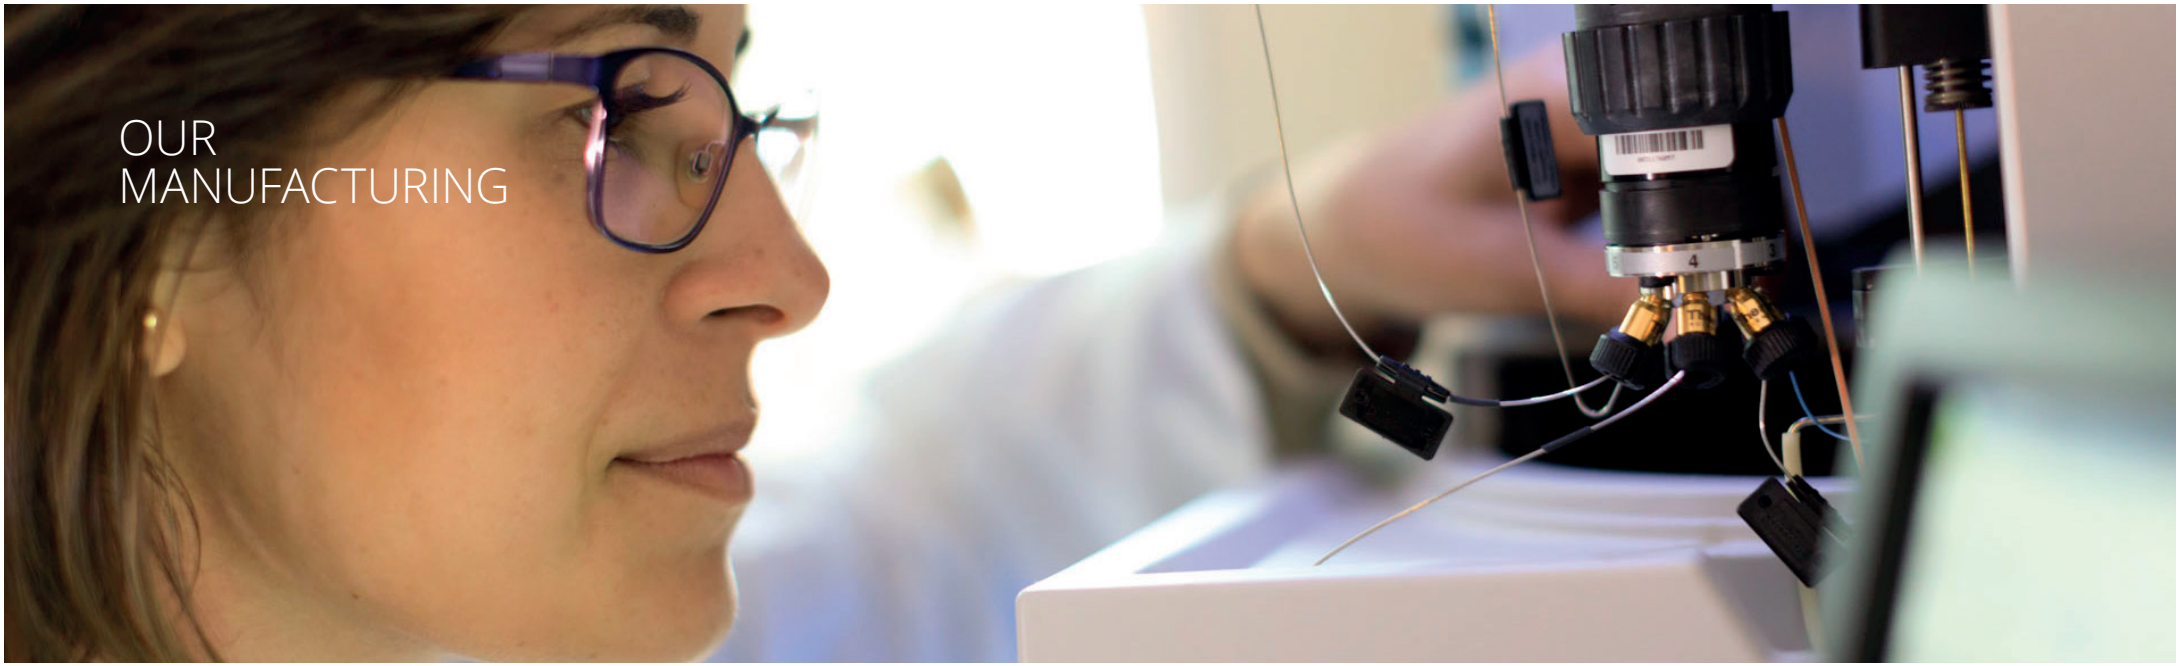
Initial license fees, milestone payments and remuneration for development work as well as future royalties on sales. This revenue stream is volatile in its nature.

REVENUES FROM ANTIBODY MANUFACTURING

Mainly revenue from process development and manufacturing for external customers. Revenues vary with BioInvent's need for production for its own projects.

REVENUES FROM TECHNOLOGY LICENSES

Refers to the Company's technology platform n-CoDeR® and include access fees, milestone payments, and future royalties on sales of products developed under the license. This revenue stream is volatile in its nature.



Proven track record since 1988

BioInvent's manufacturing facility provides capacity to produce antibodies for the Company's preclinical studies and clinical trials, which is key for a swift preclinical/ clinical development path. The manufacturing facility also provides the opportunity to manufacture and sell antibodies to external parties.

BioInvent Manufacturing, the contract manufacturing business unit of BioInvent International AB, has a proven track record for clients and partners since 1988. By using single use technology for more than 30 years, BioInvent Manufacturing has produced drug substance for clinical trials in Europe, the USA, Japan, and Australia.

MANUFACTURING CAPABILITIES

The BioInvent manufacturing facility is compliant with current Good Manufacturing Practice (cGMP) regulations and is fully based on disposable technology and can produce batches in sizes from 40 L to 1,000 L. The platform process ensures rapid and efficient process development and spans everything from cell line process, formulation, and analytical development to QP release for clinical trials. BioInvent offers a range of cell line development options that include a royalty free GS knocked CHO K1 cell line.

BioInvent is conveniently located, in the university town of Lund Sweden, just 40 minutes from Copenhagen International Airport. The highly experienced team at BioInvent Manufacturing provides flexibility and a proven collaborative approach to exceed our client's goals. Our process development team uses a platform process to ensure rapid and successful development of mammalian expression systems starting with technology transfer or cell line development to final QP release of drugs for clinical trials.

SERVICES AVAILABLE

- cGMP manufacturing of clinical grade material (phase 1 to 3) in 200 or 1000L SUBs
- Fully disposable manufacturing
- Cell line development
- Process development and process optimization
- cGMP cell bank preparation and storage
- Analytical development
- Formulation development
- Drug product filling at collaboration partner
- Release testing and QP release
- cGMP protein stability studies
- Regulatory filing (IMPD/IND) preparation

SUSTAINABILITY

As a pharmaceutical company, BioInvent and its employees navigate a complex landscape with a range of obligations and regulations to follow. In order to facilitate decisions that impact the company's performance and standing, BioInvent has adopted a Code of Conduct to complement existing policies. Every employee has to act according to this framework.

A good corporate citizen

BioInvent takes its role as a corporate citizen seriously, and the company's business supports six of the goals of Agenda 2030.
Good health and wellbeing (goal 3) is what BioInvent is all about; *Quality education* (goal 4) is supported by BioInvent's cooperation with academia where the company offers internships, mentorships, and thesis opportunities; *Gender equality* (goal 5) is essential for the company to maximize performance; *Affordable and clean energy* (goal 7) is fulfilled by the energy provided by our landlord Wihlborgs (see also the section *Environmental sustainability* on page 30); *Decent work and economic growth* (goal 8) is something the company lives every day and is vital for the continued success; and *Responsible consumption and production* (goal 12) is fulfilled through the way we run our operations.

Towards a sustainable business strategy

In 2023, BioInvent launched two sustainability initiatives. During the summer, the company became a Nasdaq ESG Transparency Partner, and in the autumn, the company initiated a plan to strengthen our business strategy.

ANALYSIS AND STRATEGY INTEGRATION

BioInvent is reviewing its strategy and operations to describe and analyze its value chain. The company is also identifying its most important stakeholders, conducting a stakeholder analysis and mapping out its sustainable development goals in relation to the value chain.

This initial step is followed by a materiality analysis and the mapping of relevant targets from the sustainable development goals related to the value chain. The development goals are then broken down into sub-targets to create actionable tasks for each department.

CONTINUED WORK IN 2024

During 2024, BioInvent will continue its sustainability efforts and initiate the work to create action plans (goals/measurement/follow-up/responsibility) to create work procedures guiding the overall business strategy plan.

The ambition is to implement the new sustainable business strategy to make sure that sustainability aspects are integrated into the business processes and applied by all employees. In parallel, the company will plan for a future verification of its sustainability efforts to achieve the ultimate goal of having sustainability incorporated in the entire business concept and increase transparency.

Environmental responsibility

BioInvent works actively to integrate sustainability and to reduce our overall environmental footprint in our daily routines. BioInvent works according to the principles regulated in the Swedish Environmental Code and consistently strives to reduce the use of substances that may be harmful to the environment or humans, and to ensure that our environmental impact is kept to a minimum.

Our aim is to assess the value chain early and to make sustainable choices. All our energy consumption, electrical power and district heating/cooling are based on renewable sources.. Another goal is to continuously improve and optimize use of chemical substances and other resources and to recycle waste. Proactive environmental efforts reduce the risk of harming the environment and health and put the Company in a better position to handle future environmental legislation and societal requirements.

SWEDISH ENVIRONMENTAL CODE

BioInvent's operations do not require a permit according to the Swedish environmental code. To secure a good dialogue and regular external inspections by authorities, BioInvent has voluntarily selected to have a permit according to the Swedish Environmental code. Our permit regulates matters such as not to dispose living cells in wastewater, limit amount of cell culture media to reduce the level of nutrition in wastewater and reduce noise levels. Actual use of cell culture media, and results from wastewater testing are reported to the authorities on a yearly basis. In addition to the yearly environmental inspections performed by the authorities, BioInvent has a self-monitoring program, which regulates and describes procedures and risk management to reduce potential environmental impact. As part of the program, an external review and assessment of our procedures and potential environmental risks are also performed.

LIMITED EMISSIONS

The Company has limited emissions from its laboratories and production facility. The emissions consist of commonly found salts and easily biodegradable organic substances. Waste is sorted and separated, and special procedures are applied for handling environmentally hazardous and biohazardous waste.

IMPORT AND EXPORT PERMIT

The Company also has a permit to import and export material/samples containing DNA/RNA, tissue, and recombinant proteins in accordance with the European Parliament's regulation. BioInvent uses genetically modified microorganisms (GMM) in its research and development work and has permits for the so called contained use of such organisms according to the Swedish Work Environment Authority's directions.

RENTED PREMISES

BioInvent rents its premises from the real-estate company Wihlborgs. A large part of BioInvent's energy consumption is related to the rented premises and utilities provided by the real-estate company. BioInvent and Wihlborgs work continuously to reduce the carbon dioxide emissions and energy consumption. In 2023, Wihlborgs announced that the premises rented by BioInvent have achieved the Sweden Green Building Council's environmental certification with a strong performance in indoor environment and the use of resources.

During the last years, energy consumption has been reduced by changes in utility systems such as clean steam, central heating/cooling and vacuum distribution. Over the past 15 years, Wihlborgs has halved its direct climate emissions while doubling the number of square meters. The company is climate neutral in its Swedish property management since 2019.

See page 42 for further details.

Social responsibility

As a company, BioInvent follows the obligation to ensure that human rights are upheld in practice. The company follows applicable legislations and regulations and has collective agreement with IKEM and PTK. At company level, BioInvent has active union clubs that meet regularly. The company also has employee representatives in the Board.

EMPLOYEE ENGAGEMENT

BioInvent's integrated operations with the functions Preclinical Development, Clinical Development, and Technical Operations require the Company to attract employees with excellent skills within key areas such as antibody biology, immunology, and cancer biology as well as strategic design and implementation of clinical trials, and manufacturing.

BioInvent's ambition is to offer a sound and safe work environment for employees whether they work within research laboratories, office environments, or out of the office. The psychosocial work environment is as important as the physical environment. During 2022, the company initiated regular Pulse surveys to keep track on work time balance and the wellbeing of all employees. The survey was repeated quarterly in 2023. BioInvent also offers flexible working hours, and when possible, flexible working places such as working from home. There is a broad range of benefits that enhance the wellbeing of the employees.

To be able to make changes or improvements when necessary, BioInvent continuously monitors key performance indicators. Today, these indicators comprise of for example sick leave and the ratio between women and men generally in the company and among management. For 2023, sick leave amounted to 1,64 percent. The overall ratio between women and men are 70 to 30. On the manager level, the ratio between women and men are 64 to 36.

WHISTLEBLOWING FUNCTION IN PLACE

Businesses have an ethical obligation to protect and support the employees working for them. That includes protecting employees who raise alarms about possible misconduct in the business. An operationally independent whistleblowing function was established during 2022. A whistleblower is an employee who discloses information that the individual reasonably believes is evidence of gross mismanagement, gross waste of funds, an abuse of authority, a substantial and specific danger to public health or safety, or a violation of law, rule, or regulation.

BUILDING AN EVEN STRONGER BIOINVENT

In 2024, we will continue building BioInvent of the future. Some of the ambitions are already in place such as a low sick leave and regular pulse surveys. The company will continue to develop internal as well as external communication and give all employees further possibilities to take part in the creation of an even stronger BioInvent.

Governance at BioInvent

All business of BioInvent shall be characterized by professionalism and high ethical standards. BioInvent requires honesty and integrity in its business and expects the same from its business associates.

ZERO TOLERANCE ON BRIBERY
BioInvent does not accept offering or giving money or anything else of value either as an inducement to make, or as a reward for making, any decision favorable to the interest of BioInvent. The company does not accept or offer gifts, hospitality or anything of material value that may compromise the independence or judgement of the company, business partners or a third party or to retain an improper business advantage.

Corruption, bribery, and unfair anti-competitive actions is not permitted. Business decisions must always be based on the best interest of the company and not on personal considerations or relationships. BioInvent has adopted Anti-bribery Guidelines.

ANTI-MONEY LAUNDERING
Money laundering is the process through which proceeds of criminal activities and their true origin and ownership are changed so that the proceeds appear legitimate. To prevent money laundering, BioInvent has adopted the following principles: business partner due diligence; no cash payments to or from business partners; and no payment other than to the contracted business partner.

INSIDE INFORMATION
The company's employees must not use non-public information about BioInvent or its business to influence his or her decision or anyone else's decision to purchase or sell BioInvent securities. To facilitate compliance with applicable listing rules and regulations, BioInvent has adopted an Insider Policy.

BioInvent and all its employees, shall comply with applicable laws, rules, regulations, and relevant guidelines in its business activities. It is the responsibility of the employees to seek appropriate advice on relevant legal requirements and other legal issues.

INTERNATIONAL TRADE
Employees involved in international business transactions, are expected to be aware of applicable export and import regulations and trade sanctions laws. For such purpose, BioInvent has adopted Trade Sanctions Guidelines.

HUMAN RIGHTS
BioInvent supports and respects fundamental human rights and recognizes the company's responsibility to observe and safeguard those rights when we conduct our business. The company must ensure that we do not violate the Universal Declaration of Human Rights adopted by the General Assembly of the United Nations and must strive to identify potential and actual negative human rights impacts related to our operations and business partners and act responsibly and forcefully if we identify such risk.

No form of forced labor, involuntary or uncompensated work is accepted or tolerated. Any form of exploitation of children is forbidden and the rights of young must be protected.

BIOETHICS
BioInvent recognizes the principles of the UNESCO Declaration on Bioethics and Human Rights and will give careful attention to ethical implications of our research and development activities. For such purpose, BioInvent has adopted Bioethics Guidelines.

BUSINESS CONTINUITY
In 2023, BioInvent designed a business continuity plan to provide an effective documented framework and process to manage critical infrastructure activities and their dependencies in the event of a major incident by assuring and maintaining enterprise infrastructure, managing infrastructure reliability, and minimizing downtime.

REPORTING CONCERNS
If an employee become aware of circumstances that may constitute potential, suspected or actual violations of BioInvent's Code of Conduct, he or she is required to report it immediately.

CORPORATE GOVERNANCE REPORT
For BioInvent's Corporate governance report, see pages 84-86.

THE BOARD AND AUDITORS (1/2)

Leonard Kruimer
Chairman of the Board since 2018. Member of the Remuneration Committee and the Audit Committee.

MBA, CPA. He served as a Board Member in BioInvent between 2016–2017. He was CFO and member of the board of Crucell NV from 1998 to 2011 and has held senior executive positions at Royal Boskalis N.V., GE Capital and Continental Can Company. Born 1958.

Other board appointments: Board member in Zealand Pharma A/S, Basilea International AG and Pharming Group NV. Director in AI Global Investments (Netherlands) PCC Ltd.

Shareholding: 33,538

Independent in relation to the Company, senior executives, and major shareholders.

Vessela Alexieva
Member of the Board since 2013. Deputy Employee Representative since 2023.

M.Sc. in Molecular and Functional biology. Senior Research Engineer. Born 1959.

Other board appointments: -

Shareholding: 932 (own and affiliated holdings)

Conditional Employee Options: Option program 2022/2024: 3,483, and Option program 2023/2025: 1,650

Natalie Berner
Member of the Board since 2022. Member of R&D Committee.

BA in Community Health from Brown University and a Certificate in Premedical Sciences from Columbia University. Previous Research Associate at the New York University School of Medicine. Currently Managing Director, Therapeutics at Redmile Group, LLC. Born 1990.

Other board appointments: Redx Pharma Plc and Sensorion SA.
Shareholding: -

Independent in relation to the Company and senior executives. Dependent in relation to major shareholders.

Elin Birgersson
Board member. Employee Representative.

Member of the Board since 2023. M.Sc. in Chemical biology. Elin has worked at the university (KTH) and pharma and biotech industry since 2011 and has experience in antibody discovery and high-throughput analysis. Born 1985.

Other board appointments: -

Shareholding: 92 (affiliated holdings)

Conditional Employee Options: Option program 2022/2024: 2,601, and Option program 2023/2025: 768

Kristoffer Bissessar
Member of the Board since 2020. Chairman of the Audit Committee. Member of the Remuneration Committee.

Broad experience from the financial industry, operative in banking and finance between 1989 – 2012, with experience from asset management, institutional equity sales and investment banking. Previously held senior positions at Svenska Handelsbanken AB, Deutsche Bank AG and Nordea Bank AB and served as board member of the Swedish Securities Dealers Association. Board member of BioInvent during 2018-2019. Born 1968.

Other board appointments: -
Shareholding: 29,000

Independent in relation to the Company, senior executives, and major shareholders.

Erik Esveld
Member of the Board since 2023. Member of the Audit Committee.

Chief financial officer of Van Herk Groep since more than 20 years, joining the Van Herk Groep already in 1998. Erik Esveld holds a Master of Science degree in econometrics of the Erasmus University of Rotterdam and a post master degree in finance and control of the Nyenrode Business University. Born 1968.

Other board appointments: Director of the supervisory boards of SkylineDx BV and Agendia NV.

Shareholding: 18,000

Independent in relation to the Company and senior executives. Dependent in relation to major shareholders.

THE BOARD AND AUDITORS (2/2)

Thomas Hecht
Member of the Board since 2020. Chairman of the Remuneration Committee and member of the R&D Committee.

Doctor of Medicine. Previously experience as Vice President Marketing at Amgen Europe, and has held various positions of increasing responsibility in clinical development, medical affairs and marketing at Amgen between 1989 and 2002. Prior to joining the biopharmaceutical industry, Thomas Hecht was certified in internal medicine and served as Co-Head of the Program for Bone Marrow Transplantation at the University of Freiburg, Germany. Currently Managing Partner at HHC Healthcare Consulting. Born 1951.

Other board appointments: Chairman of the board of Orion Biotechnology Ltd., Affimed N.V., and Aelix Therapeutics S.L.

Shareholding: -

Independent in relation to the Company, senior executives, and major shareholders.

Nanna Lüneborg
Member of the Board since 2022. Member of R&D Committee and member of the Remuneration Committee.

PhD in Neuroscience from University College London, MBA from the University of Cambridge and a BA in Physiology and Psychology from the University of Oxford. Currently General Partner at Forbion. Prior experience with Apposite Capital and Novo Ventures, one of the largest healthcare investors globally, where Nanna was a key member of the European deal team focusing on late-stage biopharma investments across Europe. Nanna Lüneborg has previously served on the Board of Directors of publicly traded and privately held companies, including Lava Therapeutics (LVTX), Numab (private), ReViral (acquired by Pfizer), NBE Therapeutics (acquired by Boehringer Ingelheim), ObsEva (OBSV), IO Biotech (IOBT), Inventiva (IVA), Orphazyme (ORPHA), NodThera (private), MinervaX (private), and Stargazer (private). Born 1975.

Other board appointments: Board member in F2G and Noema Pharma, board observer in Numab Therapeutics.

Shareholding: -

Independent in relation to the Company, senior executives, and major shareholders.

Vincent Ossipow
Member of the Board since 2021. Member of the R&D Committee.

CFA Charter, Ph.D. in Molecular Biology. Partner of Omega Funds and former Chief Scientific Officer of Omega Alpha SPAC. He served as a Board Member in BioInvent between 2016–2020. Former partner in Private Equity Sectoral Asset Management. Researcher at University of Geneva. Research analyst at Pictet Bank. Born 1968.

Other board appointments: Board member of Sophia Genetics, Aerium Therapeutics and FoRx Therapeutics and board observer of Anaconda Brain.

Shareholding: -

Independent in relation to the Company, senior executives, and major shareholders.

Martin Pålsson
Member of the Board since 2022. Employee Representative

Martin has worked in the pharma and biotech industry since 2003 (QPharma, Novozymes and Repligen), and has extensive experience in GMP and chromatography. Born 1979.

Other board appointments: -

Shareholding: -

Conditional Employee Options: Option program 2022/2024: 3,483, and Option program 2023/2025: 1,650

Bernd Seizinger
Member of the Board since 2018. Chairman of the R&D Committee, and member of the Remuneration Committee.

Doctor of Medicine and Doctor of Neurobiology. Previous experience as CEO and President of GPC Biotech, Executive Vice President and Chief Scientific Officer at Genome Therapeutics Corporation and Vice President of Oncology Drug Discovery and, in parallel, Vice President of Corporate and Academic Alliances, both at Bristol-Myers Squibb. Senior faculty positions at Harvard Medical School, Massachusetts General Hospital, and Princeton University. Born 1956.

Other board appointments: Board member and chairman of multiple public and private biotech companies in the United States, Europe, and Canada, including Oxford BioTherapeutics, CryptoMedix Inc., Oncolytics Biotech Inc., Aprea AB, Nykode AS (formerly Vaccibody), and Aptose Inc. Advisory board member/Senior Advisor to Biotech Venture Capital Funds such as Pureos BioVentures and Hadean Ventures.

Shareholding: 66,000

Independent in relation to the Company, senior executives, and major shareholders.

Auditor
KPMG AB

Auditor in charge Linda Bengtsson, Authorized Public Accountant. Born 1974.

Auditor for BioInvent International AB since 2020.

EXECUTIVE MANAGEMENT TEAM (1/2)

Martin Welschof
Chief Executive Officer.
Employed since 2018.

Ph.D. (Dr.rer.nat.) in recombinant antibody technology. He did his postdoctoral training at the German Cancer Research Center, Department for Recombinant Antibody Technology and at the University of Heidelberg, Department of Transplantation Immunology both in Heidelberg, Germany. Martin has a broad international experience from executive positions within the biotech industry, including Director of Technology at Axaron Bioscience AG, Heidelberg, Germany, CEO of Affitech (Nasdaq Copenhagen) and CEO of Opsona Therapeutics, Dublin, Ireland. Member of the Board of APIM Therapeutics AS, Nextera AS and Anocca AB. Born 1961.

Shareholding: 22,400

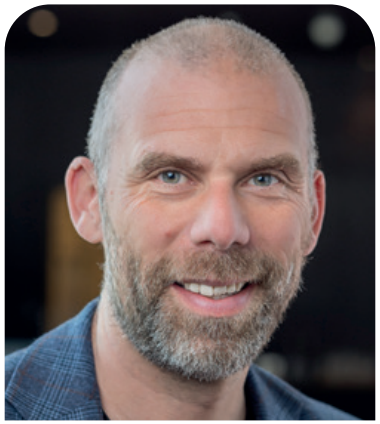
Conditional Employee Options:
Option program 2019/2025: 1,108,095
Option program 2022/2024: 38,000
Option program 2023/2025: 18,000

Stefan Ericsson
Chief Financial Officer.
Employed since 1998.

MBA, Lund University. Chief Financial Officer since 2016 and has previously served as Director Business Control. Previous experience from the Swedish Tax Agency and as auditor at PricewaterhouseCoopers. Born 1963.

Shareholding: 8,000

Conditional Employee Options: Option program 2019/2025: 347,055 Option program 2022/2024: 19,000 Option program 2023/2025: 9,000



Björn Frendéus
Chief Scientific Officer.
Employed since 2001.

Doctor of Immunology. Frequent publisher in leading scientific immunology journals, and speaker and chair at international Immuno-oncology conferences. Inventor on more than 150 patents and patent applications. Visiting Professor at University of Southampton. Born 1973.

Shareholding: 23,089 (own and affiliated holdings)

Conditional Employee Options: Option program 2019/2025: 664,857 Option program 2022/2024: 19,000 Option program 2023/2025: 9,000

Andres McAllister
Chief Medical Officer.
Employed since 2017.

Doctor in Medicine and Surgery from the Universidad del Rosario (Bogotá), and holds a PhD from the Institut Pasteur/Université Paris 7. He has performed academic work at the Pasteur Institut and the University of California, San Francisco on cancer immunotherapy. Andres joins BioInvent from a position as Chief Scientific Officer at Debiopharm, and has previously held senior roles at IDM and BioMérieux/ Pierre Fabre. Born 1956.

Shareholding: 3,009

Conditional Employee Options: Option program 2019/2025: 772,776 Option program 2022/2024: 19,000 Option program 2023/2025: 9,000

EXECUTIVE MANAGEMENT TEAM (2/2)

Marie Moores
Chief Operating Officer.
Employed since 2022.

Over 25 years' experience of transforming international organizations, with expertise in regulated environments and building businesses focusing on drug and medical device development. Chair of the board of Aidee Health, Business Coach and jury panelist for the European Innovation Council, which supports innovation, from early-stage research to startups and scaleups with a special focus on breakthrough, market-creating and deep-tech innovations. Former Executive Vice President, International Operations & Early Development at the Norwegian company LINK Medical Research. She previously spent more than 20 years with Theradex Oncology as Director, Clinical and Regulatory Operations for Europe. Born 1968.

Shareholding: -

Conditional Employee Options: Option program 2022/2024: 19,000 Option program 2023/2025: 9,000

Ingunn Munch Lindvig
Senior Vice President Regulatory Affairs.
Employed since 2023.

PhD in Biology from the University of Oslo. Experienced regulatory affairs leader who has worked across all stages of product development in several biotechnology companies and has hands-on experience of the US and EU regulatory systems over the last 25 years. Previously Vice President and Head of Regulatory Affairs at Circio (Targovax), Head of Regulatory Affairs at Nordic Nanovector and also held senior regulatory positions at Photocure and Nycomed/GE Healthcare. Born 1965.

Shareholding: -

Conditional employee options: Option program 2023/2025: 4,741

Kristoffer Rudenholm Hansson
Senior Vice President, Technical Operations.
Employed since 2016.

Master of Science in Chemical engineering. Responsible for process development and production of antibodies for clinical studies. He has 25 years of experience from managing manufacturing of antibodies and other proteins for clinical use. Kristoffer has held a numerous positions within CMC Biologics A/S (now AGC Biologics), DAKO A/S and Symphogen A/S. Born 1974.

Shareholding: 22,303 (whereof 7,177 in endowment insurance)

Conditional Employee Options: Option program 2019/2025: 353,259 Option program 2022/2024: 19,000 Option program 2023/2025: 9,000

Sylvie Ryckebusch
Chief Business Officer.
Consultant since 2020 .

PhD in computational neurobiology from the California Institute of Technology and BSc degrees in physics and mathematics from the University of Maryland. She was a postdoctoral fellow at the Harvard Business School before joining McKinsey and Company. Sylvie has over 20 years of experience in business development, alliance management, and corporate strategy with both large pharmaceutical and numerous biotechnology companies, including senior management positions at Serono, Merck KGaA and Index Ventures. Member of the Board of Directors of Domain Therapeutics. Born 1965.

Shareholding: 22,870 (own and affiliated holdings)

DIRECTORS' REPORT

The Board of Directors and the CEO of BioInvent International AB (publ), co. reg. no. 556537-7263, listed on the Nasdaq Stockholm (BINV), hereby present the annual accounts and consolidated accounts for the financial year January 1–December 31, 2023. The Company is registered in Sweden and is located in the Lund municipality. The visiting address is Ideongatan 1, Lund and the postal address is 223 70 Lund. The descriptions below of the status of BioInvent's projects are current at the time this annual report was presented.

About BioInvent

BioInvent International AB (Nasdaq Stockholm: BINV) is a clinical-stage biotech company that discovers and develops novel and first-in-class immuno-modulatory antibodies for cancer therapy, with currently five drug candidates in six ongoing clinical programs in Phase 1/2 trials for the treatment of hematological cancer and solid tumors, respectively. The Company's validated, proprietary F.I.R.S.T™ technology platform identifies both targets and the antibodies that bind to them, generating many promising new drug candidates to fuel the Company's own clinical development pipeline and providing licensing and partnering opportunities.

The Company generates revenues from research collaborations and license agreements with multiple top-tier pharmaceutical companies, as well as from producing antibodies for third parties in the Company's fully integrated manufacturing unit.

Financial information

REVENUE AND RESULT

Net sales amounted to SEK 71.5 million (326.1). Revenues for the period were mainly derived from a USD 1 million (SEK 11.1 million) milestone payment from Exelixis, when a research milestone had been achieved in the development of an antibody, as well as revenues from production of antibodies for clinical studies and revenues from research services.

Revenues for the corresponding period 2022 were mainly derived from an upfront fee of USD 25 million (SEK 255.8 million) when an exclusive option and license agreement was entered into with Exelixis to develop novel antibody-based immuno-oncology therapies, a EUR 0.5 million (SEK 5.2 million) milestone payment under the collaboration with Bayer Healthcare/Hope Medicine related to the initiation of a Phase 2 clinical trial, as well as revenues from production of antibodies for clinical studies and revenues from research services.

The Company's total costs amounted to SEK 442.0 million (376.7). These are divided between external costs of SEK 299.7 million (253.1), personnel costs of SEK 125.5 million (108.9) and depreciation of SEK 16.8 million (14.7).

Research and development costs amounted to SEK 390.4 million (325.9). Sales and administrative costs amounted to SEK 51.6 million (50.8).

Profit/loss after tax amounted to SEK -330.3 million (-42.5). The net financial items amounted to SEK 39.8 million (8.4). Profit/loss per share before and after dilution amounted to SEK -5.02 (-0.69).

FINANCIAL POSITION AND CASH FLOW

On January 17, 2023 BioInvent announced that it had been selected as partner of The Leukemia & Lymphoma Society's Therapy Acceleration Program® (LLS TAP), aimed at advancing the company's program to treat blood cancers. The partnership include access to the unique scientific, clinical and drug development expertise of LLS as well as a strategic capital equity investment from LLS TAP of USD 3 million (SEK 31.3 million before issue expenses). 836,478 new shares were issued based on the authorization granted by the AGM on April 28, 2022.

The share capital consists of 65,804,362 shares as of December 31, 2023.

As of December 31, 2023, the Group's liquid funds, current and long-term investments amounted to SEK 1,283.0 million (1,593.6). The cash flow from operating activities amounted to SEK -341.7 million (-41,2).

The shareholders' equity amounted to SEK 1,309.7 million (1,606.1) at the end of the period. The Company's share capital was SEK 13.2 million. The equity/assets ratio at the end of the period was 94% (94). Shareholders' equity per share amounted to SEK 19.90 (24.72).

DATA PER SHARE	2023	2022	2021	2020	2019
Earnings per share, SEK					
Before dilution	-5.02	-0,69	-5.14	-2.66	-7.64
After full dilution	-5,02[1)]	-0,69[1)]	-5,14[1)]	-2,66[1)]	-7,64[1)]
Average no. of shares					
Before dilution (thousands)	65,767	61,521	54,161	28,716	18,141
After full dilution (thousands)	65,767[2)]	61,521[2)]	54,161[2)]	28,716[2)]	18,141[2)]

1) There is no dilution of earnings per share because the earnings per share before dilution was negative.
2) No dilution is present since the subscription price exceeds the average share price.

The number of ordinary shares outstanding before the reverse share split in 2020 has been adjusted for the proportionate change in the number of shares outstanding as if the reverse split had occurred on January 1, 2019.

The figures in the tables are rounded to one decimal, while the calculations are made using a greater number of decimals. As a result, it may appear that certain tables do not add up.

Definitions[3)]

Equity/assets ratio
Shareholders' equity as a percentage of the balance sheet total.

3) Definition of alternative financial ratio not defined by IFRS.

INVESTMENTS
Investments for the period in tangible fixed assets amounted to SEK 13.3 million (12.4).

PARENT COMPANY
The BioInvent Group consists of the Parent Company, BioInvent International AB, and the subsidiary BioInvent Finans AB. Net sales amounted to SEK 71.5 million (326.1). Profit/loss after tax amounted to SEK -330.1 million (-42.3). The cash flow from current operations amounted to SEK -349.5 million (-47.6). All operations of the Group are conducted by the Parent Company. Except for financial leases, the Group's and the Parent Company's financial statements coincide in every material way.

FUTURE PROSPECTS
BioInvent's overall objective is to build a portfolio of clinical development projects within cancer where significant revenue streams are generated for the Company from licensing or sales, and to assist international pharmaceutical companies in their drug development and thereby generate revenue that contributes to finance the Company's costs.

CORPORAT GOVERNANCE REPORT
Based on the Annual Accounts Act, chapter 6, § 8, BioInvent has decided to produce a corporate governance report that is separate from the annual report.

The BioInvent share

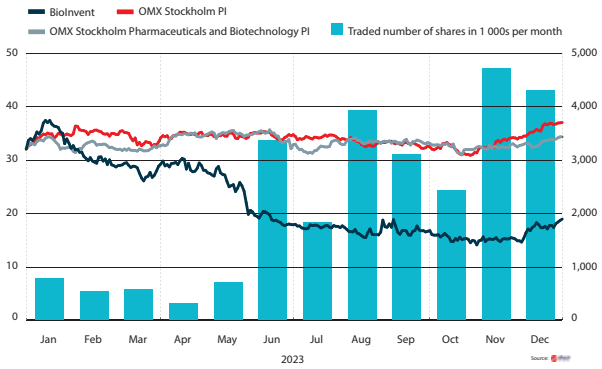
The BioInvent share has been listed on Nasdaq Stockholm (BINV) since 2001. The Company's share capital consists of 65,804,362 shares.

If fully exercised, Option Program 2019/2025 will represent a dilution equivalent to around 0.2% of the shares in the Company, Option Program 2022/2024 will represent a dilution equivalent to around 1.0% of the shares in the Company, and Option Program 2023/2025 will represent a dilution equivalent to around 1.2% of the shares in the Company. The Company's option program is described on page 61-62.

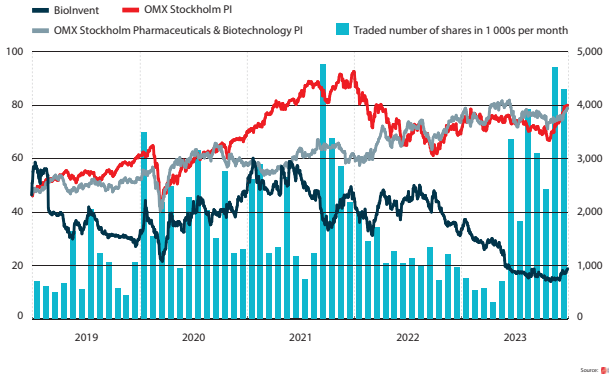
There is only one class of stock. Each share carries one vote at the Annual General Meeting and all shares carry equal right to a share in the assets and profits of the Company. The regulations in the Company's Articles of Association contain no restrictions on the transfer of shares. The Company is not aware of any agreements between shareholders that would restrict the right to transfer shares. Nor are there any agreements, in which the Company is a party, that may go into force, be amended or go out of force if control of the Company is changed as a result of a public purchase offer.

The Annual General Meeting 2023 authorized the Board of Directors to resolve on the issue of new shares, on one or several occasions during the period up to the next annual general meeting. The number of shares to be issued by virtue of the authorization shall not entail a dilution effect of more than 20% of the registered share capital after completed issue. The Annual General Meeting has not authorized the Board of Directors to take decisions on acquisition of shares by the Company.

Share price and trading volume 2023



Share price and trading volume 2019-2023



SHARE PRICE AND TRADING VOLUME

In 2023, the share price decreased 41%, from SEK 32.05 to SEK 18.96. The highest price paid in 2023 was SEK 38.90 and the lowest price was SEK 14.00. BioInvent's market capitalization totaled SEK 1,248 million at the end of 2023.

Average trading volume per trading day was SEK 1.9 million (2.4). Average number of trades per trading day were 197 (204).

OWNERSHIP STRUCTURE

In 2023, the number of shareholders decreased 4%, from 9,486 to 9,108. Foreign owners held 65% (66) of the share capital and votes. The five largest shareholders owned 49% (48) of the shares. Redmile Group, LLC. and Van Herk Investments B.V. have a shareholding amounting to 10% or more of the number of votes in BioInvent.

DIVIDEND AND DIVIDEND POLICY

The Board of Directors do not recommend payment of any dividend for the 2023 financial year. The Company will continue to focus on research and development of new products. Available financial resources will be used to finance these projects. The Board of Directors therefore do not recommend that any dividend be paid for the next few years.

DISTRIBUTION OF FINANCIAL REPORTS

Annual reports will be sent to shareholders upon request and may be ordered at the address BioInvent international AB, 223 70 Lund or by phone +46 (0)46-286 85 50. The annual report is published in Swedish and English.

Personnel and organization

BioInvent's operations consist of Clinical Development, Preclinical Development and Technical Operations where work is done in an integrated way to create the best possible conditions for the various projects. This enables the Company to benefit from the accumulated immunology, cancer biology and antibody biology knowhow, ensuring that prioritized projects have the resources they need for their development.

The research department works with BioInvent's technology platforms, F.I.R.S.T™ and n-CoDeR® and develops antibodies for the Company's preclinical projects. The research department further supports clinical development programs with important mechanism-of-action and translational data e.g., bioassays and biomarkers, new indications, and combination data. The research activities are organized in a project-based, cross-functional manner. Technical Operations consists of three functions, one responsible for producing antibodies for clinical studies, one working with quality assurance and quality control, and the Protein & Analytical Chemistry support team.

In addition to the line functions referred to above, the Company's quality assurance department and the Company's own patent department are directly involved in research and development. The organization's support functions include business development, HR, IR, finance, and IT.

As of December 31, 2023, BioInvent had 111 (94) employees (full time equivalent), 99 (84) of whom work in research and development. 94% of the Company's employees have university degrees, including 41% with PhDs.

Environment and Quality & Regulatory Approval

ENVIRONMENT

BioInvent places great importance on environmental work which is an integrated part of the daily routines. BioInvent works actively with environmental issues and the principles under the general rules of consideration in the Swedish Environmental Code are observed in the Company's ongoing operations. The Company consistently endeavors to reduce the use of substances that may be harmful to the environment and ensure that environmental impact is kept to a minimum. The aim is to early on in the value chain assess the possibility of replacing a substance that is harmful to the environment with a less harmful one. Another goal is to continuously improve the use of chemical substances and other resources so that the Company's environmental impact is minimized in this respect as well. Proactive environmental efforts reduce the risk of harming the environment and health and put the Company in a better position to handle future environmental legislation and societal requirements.

BioInvent's type of operations do not require a permit according to the Swedish environmental code. To secure a good dialogue and regular external inspections by authorities, BioInvent has voluntarily selected to have a permit in accordance with the Swedish Environmental Code for manufacturing of biological pharmaceutical substances, and reports are required to be submitted to Lund municipality. Lund municipality carries out annual environmental inspections of the Company. Self-monitoring is carried out to monitor the Company's operations on an ongoing basis to counteract and prevent negative environmental impact. As part of this self-monitoring process, the Company has introduced a description of environmental consequences and a plan for the self-monitoring process. In accordance with the plan, periodic inspections are carried out to check compliance with authorizations and current legislations.

The Company has limited emissions from its laboratories and production facility. The emissions consist of commonly found salts and easily biodegradable organic substances. Waste is sorted and separated, and special procedures are applied for handling environmentally hazardous and biohazardous waste.

The Company also has a permit to import and export material/samples containing DNA/RNA, tissue and recombinant proteins in accordance with the European Parliament's regulation. BioInvent uses genetically modified microorganisms (GMM) in its research and development work and has permits for the so called contained use of such organisms according to the Swedish Work Environment Authority's directions.

QUALITY & REGULATORY APPROVAL

The Company has a permit under the EU rules on producing investigational pharmaceutical products for clinical trials according to Good Manufacturing Practice (GMP). This permit is issued by the Swedish Medical Products Agency which conducts regular inspections to verify that production maintains the approved level of quality. BioInvent is also involved in auditing activity to ensure the quality of internal work, raw materials and that contracted services maintain a high standard. The Company conducts regular internal inspections and audits of external suppliers to ensure that GMP regulations are met.

BioInvent's preclinical studies to evaluate the safety of products are carried out through contract research organizations (CROs) in accordance with Good Laboratory Practice (GLP). Clinical trials are conducted according to Good Clinical Practice (GCP). In cases where tests are carried out on animals, they are conducted in laboratories that strictly adhere to the applicable regulations.

BioInvent has many years' experience of quality work, and endeavors to constantly improve the quality of all of its work.

Risks and risk management

PHARMACEUTICAL DEVELOPMENT

Pharmaceutical development is generally associated with a very high risk, and since BioInvent's project portfolio contains early phase projects, this applies to a great extent also to BioInvent. As BioInvent's project portfolio develops, this could make the Company less dependent on the success of an individual project. Antibodies also have a beneficial risk profile and a larger percentage of projects in the antibody area reach the market today compared to traditional pharmaceuticals. The probability that a drug candidate will reach the market also increases as the project is advanced through the development chain. Development of pharmaceuticals is thus capital demanding, and since only a small number of the pharmaceutical products which are subject to preclinical and clinical development will result in an approved and commercialized product, there is a risk that the research and development costs that are invested never result in an approved pharmaceutical.

BioInvent's development of pharmaceuticals is also associated with risks that include, for example, development work being delayed or more expensive in relation to established schedules or not funded at all. Further, some or all of the Company's product candidates at preclinical or clinical trials may prove to be ineffective, have side effects or in another way not meet the applicable requirements or receive the necessary market approvals, or prove to be difficult to license successfully or develop into commercially viable products.

CLINICAL TRIALS AND PRODUCT RESPONSIBILITY

All of BioInvent's potential product candidates require additional, extensive research and development before they can result in

commercialization and ultimately, steady revenues. Preclinical and clinical trials proceed from hypotheses regarding mechanisms of action which, in validating trials, may turn out to be insufficient, ineffective or cause unacceptable side effects, and a clinical study may be halted at any time. It is hard to predict the outcome of clinical trials and earlier positive results may also prove to be unrepresentative of the results obtained in later trials, for example when the drug candidate is tested with humans. BioInvent endeavors to advance its projects through the value chain. To receive approval from the authorities for commercial sales of the Company's product candidates, the Company or its partners must demonstrate the safety and efficacy of each potential product for human use for each stated indication.

The Company's operations are associated to risks relating to product liability, which is inevitable connected to research and development, preclinical and clinical studies, production, marketing, and potential future sales of pharmaceutical products. Product liability could lead to claims for damages being lodged against the Company if its pharmaceutical candidates cause illness, physical injury, death, or damage to property.

The Company has a commercial insurance policy that provides coverage in the geographic markets in which BioInvent currently is active. Although the Company considers its insurance coverage to be adequate, the scope and amount of the insurance coverage are limited and there is a risk that applicable insurance policies do not provide sufficient coverage in the event of a potential claim.

PARTNERS AND COMMERCIALIZATION

BioInvent is dependent on agreements with partners, such as large pharmaceutical companies, to be able to conduct sufficient clinical trials, especially in late development phases, as well as manufacturing of possible future pharmaceutical products. The optimal time to sign such agreements varies between different projects and depends on, for example, resource requirements, risk level and commercial potential. In the absence of adequate partnerships, BioInvent may not be able to realize the full value of a product candidate. BioInvent lacks organizational prerequisites to be able to complete the development of and/or to commercialize a product candidate on its own. It would require extensive financial resources to build such an organization, and BioInvent is therefore currently dependent on external co-operations to be able to take a product all the way to the market.

There is also a risk that any future product launch by BioInvent will not be well received on the market or become commercial successes. The market acceptance of the Company's and its partners potential future products from doctors, patients and care payers depends on a number of factors, such as the clinical indications for which the product is approved, to which extent the product constitute a safe and effective treatment, the existence and the severity of harmful side effects, the cost for treatment in relation to alternative treatments as well as the access to adequate remuneration systems and subsidies.

COMPETITION

BioInvent is subject to competition from major pharmaceutical companies, specialty pharmaceutical companies and biotechnology companies worldwide that develop antibody-based drugs or drugs that target the same indications as BioInvent's drugs. In addition to existing treatments for the indications that the Company is targeting with its research and product candidates, the Company may thus also face competition from other research and other product candidates under development by other companies. There is a number of approved pharmaceutical products on the market for treatment of cancer (oncology), and a large number of pharmaceutical and biotechnology companies operate in the field of research and development of pharmaceuticals for use in treatment of cancer. These companies include various large, well-financed and experienced pharmaceutical and biotechnology companies as well as companies that have partnered with such companies, which may give them advantages in relation to BioInvent with regards to financing, development, regulatory matters, and market establishment.

INTELLECTUAL PROPERTY PROTECTION

BioInvent's future success largely depends on the Company's ability to obtain and retain patent protection for potential products and for its own, patented technologies. The patents relate both to the Company's core technology for antibody drug development and various aspects thereof, as well as different antibody products under development and their use as drugs. The patent rights status of pharmaceutical and biotechnology companies is in general uncertain and involves complex medical and legal assessments. Therefore, BioInvent is thus dependent on its ability to keep its own and its partners' research that is not patented, protected to the relevant extent, so that BioInvent thereby can prevent others from using BioInvent's technologies, research, and confidential information.

There is also a risk that granted patents will not make BioInvent's future products competitive or that competitors will be able to circumvent the Company's patent protection.

If in its research or development, BioInvent uses substances, methods or technologies that are patented or that will be granted patents or are protected by other rights, the owner of these patents or other rights could claim that BioInvent is infringing on those rights.

BioInvent monitors and evaluates the activities, patents, and patent applications of competitors on an ongoing basis for the purpose of identifying activities that are covered by the Company's intellectual property and patents that could cover parts of the Company's sphere of activity. It may also be necessary to initiate legal proceedings to defend the Company's current or future patents, and to determine the extent and validity of patents that belong to a third party.

COMPENSATION FOR PHARMACEUTICAL SALES

BioInvent's potential future revenues are partially dependent on to what extent the Company's potential future products will qualify for subsidies from private or publicly financed healthcare programs. A significant portion of the Company's potential future income is likely to be dependent on subsidies from third parties, such as public authorities, public health providers or private health insurance providers. Certain countries require that products must first undergo a lengthy review before public subsidies may be considered.

Many of the countries in which the Company's future products could be commercialized have measures to curb rising healthcare costs. Such measures may be expected to continue and could result in stricter rules for both reimbursement levels and the medications covered.

QUALIFIED PERSONNEL AND KEY INDIVIDUALS
BioInvent's operations is organized in Clinical Development, Preclinical Development and Technical Operations, which requires the Company to hire employees with relevant skills within, for example, strategic design and implementation of clinical trial, immunology, cancer biology, antibody biology and manufacturing. However, in a business environment characterized by strong competition and rapid technological change with continuous enhancement and improved industrial know-how, it may be challenging to attract and retain employees possessing the right skills, experience, and values. The competition for qualified employees may also lead to increased remuneration levels. Conversely, if BioInvent were to offer excessively low remuneration levels, this might lead to employees choosing to terminate their employments, which would affect BioInvent's competitiveness and operations. If the Company would lose a key individual, potentially valuable know-how and experience could also be lost.

ADDITIONAL FINANCING REQUIREMENTS
BioInvent's overall objectives are to build a portfolio of clinical development projects within cancer where significant revenue streams are generated for the Company from licensing or sales, and to assist pharmaceutical companies in their drug development and thereby generate revenue that contributes to finance the Company's costs. Based on the fact that future, new clinical studies are expected to involve considerable cost, BioInvent's activities relating to these studies are expected to continue cause negative cash flows to accrue until the Company generates annual revenue on an ongoing basis from products on the market. The capital requirement is financed through (i) revenue from collaboration agreements associated with outlicensing of proprietary projects, (ii) revenue from technology licenses, (iii) revenue from external development projects and, (iv) shareholders' equity. Failure to secure such financing could negatively affect the Company's business, financial position, and operating income. Revenue expected to be received from outlicensing existing or new product candidates may fluctuate considerably. Payment from partners will typically be contingent upon projects reaching agreed development and regulatory approval milestones. An inability to achieve such milestones or adhere to schedules could seriously harm the Company's future financial position.

Guidelines for remuneration to senior executives

The Board of Directors proposes that the Annual General Meeting resolves on amended guidelines for remuneration to senior executives.

These guidelines shall apply to those persons who, during the period the guidelines are in effect, belong to the executive management, hereinafter referred to as "senior executives".

BioInvent shall offer compensation and terms of employment deemed necessary to recruit and retain qualified executives who are capable of achieving established goals. The overarching principle is to offer market-based salaries and other remuneration to senior executives at BioInvent.

In addition to fixed cash base salary, remuneration may be paid in the form of variable cash salary, pension benefits and other benefits. Additionally, the general meeting may resolve on share-related incentive programmes. Incentive programmes resolved by the general meeting are excluded from these guidelines, subject to what is stated below regarding the content of the Board of Directors' proposal.

The fixed cash base salary shall be based on the individual senior executives area of responsibility, authority, competence, experience and performance.

The variable cash salary shall reward clearly target related accomplishments in an simple and transparent way. The senior executives' variable remuneration shall depend on the extent to which previously established targets are met within the frame of the Company's operation, mainly technical and commercial milestones within proprietary drug projects. By rewarding clear and measurable progress in the Company's own drug projects as well as commercial progress, the criteria contribute to support and motivate employees to achieve the BioInvent's established business strategy and long-term value creation. The senior executives' annual variable cash remuneration may amount to not more than 60% of the fixed salary. The variable cash remuneration shall qualify for pension benefits. The Board of Directors shall have the possibility to, in accordance with general legal principles, reclaim variable cash salary.

In addition to the fixed cash base salary and variable cash salary, the company may pay a stay-on bonus (deferred fixed remuneration), which for a three year period may amount to a maximum of 100% of the fixed cash base salary for one year, and in the case of new recruitment, a guaranteed fixed bonus which may amount to a maximum of 100% of the fixed cash base salary.

Each year, the Board of Directors shall consider whether a share-based incentive programme should be proposed for the annual general meeting. If the general meeting is proposed to resolve on share-based remuneration, the Board of Directors' proposal for the general meeting shall include information about acquiring periods and, if applicable, information about the share-based remuneration expected share of total remuneration, the obligation to retain shares for a certain period after acquisition and an explanation of how the share-based remuneration promote the Company's business strategy, long-term interests and sustainability.

The senior executives' non-monetary benefits, such as company cars, computers, mobile phones, extra health insurance, or occupational health care, may be provided to the extent that such benefits are deemed market-based for senior executives in equivalent positions in the market where the company is active. The

total amount of such benefits shall be to less than 10% of the fixed cash base salary.

The ITP plan (Sw: *Industrins och handelns tilläggspension*) shall be applicable to senior executives according to collective agreement or equivalent. For senior executives covered by ITP1, the pension is defined contribution and the pension premium may amount to a maximum of 30% of the pensionable income[1], up to 30 income base amounts. For senior executives covered by ITP2, the pension is defined benefit or so-called alternative ITP, of which part of the pensionable income shall be defined benefit and part of the pensionable income shall be defined contribution according to the applicable collective agreement. Senior executive who reside outside Sweden or are foreign nationals and have their main pension in a country other than Sweden, may be offered other pension solutions that are reasonable in the relevant country. Such solutions must be defined contribution plans and not exceed 35% of the salary base.

Senior executives shall be employed for an indefinite period of time. For the CEO, the termination pay and the severance pay may together not exceed an amount equivalent to 24 monthly salaries and for other senior executives may the termination pay and the severance pay not exceed an amount equivalent to 12 monthly salaries. Severance pay shall not be paid when termination is made by the senior executive.

Senior executives may be reimbursed for non-compete undertakings after termination of the employment, however, only to the extent that severance pay is not paid for the corresponding period of time. Such remuneration shall intend to compensate the senior executive for the difference between the fixed cash salary at the time of termination of the employment and the (lower) income obtained, or could be obtained, through a new employment, assignment or own business. The remuneration may be paid during the time the non-compete undertaking applies, however not for more than 12 months following termination of employment.

Remuneration to board members and deputy board members is, according to law, resolved by the general meeting to the extent the remuneration is related to the board assignment. If a board member is employed by the company, renumeration to such board member shall be paid in accordance with these guidelines. Board members employed by the company shall not receive additional remuneration for a board assignment in the company or in a group company. If a board member performs work for the company that is not board related, market-based remuneration, taking into account the nature of the work and the work effort, shall be paid. Such remuneration shall be resolved by the Board of Directors (or, if follows from the Swedish Companies Act, the general meeting).

The Board of Directors' Remuneration Committee prepares and formulates proposals for the Board of Directors to resolve on remuneration for the CEO. The Board of Directors' Remuneration Committee prepares, in consultation with the CEO, and resolves on matters regarding remuneration to other senior executives. The assessment of whether the criteria for variable remuneration have been fulfilled shall be made by the Board of Directors and the Remuneration Committee, respectively, in a substantially non-discretionary way. The CEO and other members of the executive management do not participate in the Board of Directors' processing of and resolutions regarding remuneration-related matters in so far as they are affected by such matters.

These guidelines promotes the company's business strategy, long-term interests and sustainability in the way stated above regarding the criteria for variable remuneration and contribute to the company's ability to attract and retain important people to the operation in the long term. In the preparation of the Board of Directors' proposal for these remuneration guidelines, salary and employment conditions for employees of the company have been taken into account by including information on the employees' total income, the components of the remuneration and increase and growth rate over time, in the Remuneration Committee's and the Board of Directors' basis of decision when evaluating whether the guidelines and the limitations set out herein are reasonable.

The Board of Directors shall have the right to derogate from these guidelines if justified by particular circumstances in individual cases and a derogation is necessary to serve the company's long-term interests, including its sustainability, or to ensure the company's financial viability. In such case, the Board of Directors shall in its decision state in which part derogation from the guidelines have been made, the specific reasons that justify the derogation and also report any derogation and the reasons in the Board of Directors annual report on the Remuneration Committee´s evaluation of remuneration to senior management.

The Board of Directors shall prepare a proposal for new guidelines when there is a need for changes in these guidelines, but no later than at the annual general meeting 2028.

Information on remuneration to senior executives during previous fiscal years is presented in the company's annual report, including any previously remuneration resolved by not yet due.

DESCRIPTION OF SIGNIFICANT CHANGES TO THE GUIDELINES AND COMMENTS FROM SHAREHOLDERS

In relation to the current guidelines, the proposal entails that senior executives shall be able to receive a variable cash salary amounting to a maximum of 60% of the fixed cash base salary, compared to previously a maximum of 50% of the fixed cash base salary.

The Board of Directors has not received any views from the shareholders on the guidelines for remuneration for senior executives.

1 In addition to fixed cash salary, the pensionable income also include variable cash salary as well as certain other remuneration.

Events after the end of the financial year

See note 23 at page 69.

Proposed appropriation of profits

At the disposal of the Annual General Meeting: Share premium reserve of SEK 1,597,059,808 retained earnings of SEK 2,950,000 and profit/loss for the year of SEK -330,130,119. The Board of Directors propose that profits at the disposal of SEK 1,269,879,689 is carried forward. Thus, it is proposed that no dividend be given for the financial year 2023.

Accounting principles and information notes

Note 1 Accounting principles

STATEMENT OF COMPLIANCE WITH THE APPLICABLE RULES

The consolidated accounts have been prepared in accordance with IFRS Accounting Standards (IFRS). Since the Parent Company is an enterprise within the EU, only EU-approved IFRS will be applied. Moreover, the consolidated accounts are prepared in compliance with the Annual Accounts Act through the application of the Swedish Financial Reporting Board's recommendation RFR 1, Supplementary Accounting Regulations for Groups.

PARENT COMPANY'S ACCOUNTING PRINCIPLES

The Parent Company's annual accounts have been prepared in compliance with the Annual Accounts Act and applying the Swedish Financial Reporting Board's recommendation RFR 2, Reporting for Legal Entities. Shares in subsidiaries are recognized at acquisition value after deduction of any impairment. The Parent Company's accounting principles are consistent with the Group's accounting principles, except that the principles for financial leases, in accordance with IFRS 16, are not applied by the parent company. The Parent Company applies the exception in RFR 2 for legal entities and reports all leases as costs linearly over the lease period. The Parent Company's accounting principles for 2023 are unchanged from the previous year.

ACCOUNTING PRINCIPLES

Other than the exceptions detailed, the accounting principles set out below have been applied consistently to all periods presented in the consolidated financial statements.

In 2023, there have been no changes in accounting principles that had any significant impact on the Group's or Parent Company's financial reports. No new or amended IFRS have been applied early.

NEW IFRS:S THAT THE COMPANY HAS NOT YET STARTED TO APPLY

New and amended IFRS standards with future application dates are not expected to have a material impact on the Group's financial statements.

CLASSIFICATION

Non-current assets primarily comprise amounts that are expected to be recovered or settled subsequent to 12 months from the reporting date while current assets primarily comprise amounts that are expected to be recovered or settled within 12 months of the reporting date. Noncurrent liabilities consist primarily of amounts that the Company as of the reporting period have an unconditional right to choose to pay more than twelve months after the reporting period. If the Company does not have such a right at the end of the reporting period – or if the liability is held for trading or the liability is expected to be settled within the normal operating cycle – the liability is reported as a current liability.

BASIS FOR PREPARATION OF THE ACCOUNTS

The consolidated accounts are based on historical acquisition values, with the exception of some financial assets which are carried at fair value, i.e. derivative instruments.

The BioInvent Group consists of the Parent Company, BioInvent International AB, and the wholly owned subsidiary BioInvent Finans AB. The consolidated financial statements are prepared using the acquisition method. Accordingly, shareholders' equity in the subsidiary is entirely eliminated upon acquisition. The Group's equity consists of the equity in the Parent Company and the equity in the subsidiary accrued after the acquisition.

SEGMENT REPORTING

BioInvent's executive officers, Board and management team monitor and manage the Company's operations based on the financial results and position at the consolidated level without dividing the business into segments. BioInvent develops antibody-based drugs. The Company's risks and opportunities are mainly affected by the progress of the projects. The Company engages in integrated activities, in which the projects are considered to carry similar risks and opportunities, and there is there therefore only one business segment, which is apparent in the consolidated income statement, balance sheet, cash flow statement and the notes associated with these.

The Company's revenue originates from different geographic areas; however, the Company's risks and opportunities in these geographic areas are similar. All sales take place through the Company's own sales organization in Sweden.

REVENUE RECOGNITION

Revenue from collaboration agreements associated with outlicensing of proprietary projects

These revenues consist of initial license fees, milestone payments and remuneration for development work as well as future royalties on sales of the medication.

- Initial license fees (upfront payments) are received at the time of signing of the agreement. These payments are recognized as revenue in their entirety when the collaboration agreement is signed provided that BioInvent have met all obligations in accordance with the agreement.
- Milestone payments are received when the outlicensed drug project passes essential steps in the development process, such as the start of different clinical phases. Milestone payments are recognized as revenue when all terms and conditions of the agreement are met.
- Payment for development work in conjunction with collaboration agreements is recognized as revenue as the work is completed.
- Future royalty revenue is recognized based on the economic substance of the agreements.

In June 2022, BioInvent entered into an agreement with Exelixis that granted BioInvent the right to receive an upfront fee of USD 25 million in consideration for Exelixis receiving rights to select three targets identified using BioInvent's technology platform F.I.R.S.T™ and n-CoDeR®. The grant of these rights has been deemed to constitute a separate performance obligation that was satisfied in connection with Exelixis gaining access to the targets in June 2022. The full amount of USD 25 million has therefore been recognized as revenue in the second quarter 2022.

In the agreement with Exelixis, there are also milestone payments which depend on if and when a certain research milestone event has been achieved. In July 2023, such a milestone event was achieved and BioInvent therefore received compensation from Exelixis of USD 1 million. The achievement of this research milestone event has been deemed to constitute a separate performance obligation that was satisfied in July 2023. The full amount of USD 1 million has therefore been recognized as revenue in the third quarter 2023.

Revenue from technology licenses
These revenues refer to outlicensing of the Company's technology platform n-CoDeR® and include access fees, milestone payments when predefined goals are reached, and future royalties on the sale of products developed under the license. Access fees for technology are recognized as revenue when all obligations of the agreement are met.

External development
BioInvent also carries out external development projects such as process development and antibody manufacturing to external parties. In such agreements BioInvent receives ongoing compensation for work carried out. Revenue and expenses as well as profit and loss are reported in the accounting period during which the work is carried out. If a risk of loss is deemed to exist, individual provisions are performed on an ongoing basis.

Government grants
Grants are recognized as revenue through profit/loss for the year under "Other operating revenue" against the incurred project costs for which the grant was received.

Interest income
Interest income is recognized in the period to which it relates based on the effective interest method. Interest income is reported as financial income, see note 10.

RESEARCH AND DEVELOPMENT COSTS
Research costs are expensed as they occur. Costs for development of new products are not capitalized, unless the criteria in IAS 38 have been met. Since the Company's drug projects are quite a long time away from being registered as products that can be sold and thereby generate a financial gain for the Company, no costs for development of products are capitalized, i.e. no intangible assets developed by BioInvent have been capitalized.

REMUNERATION TO EMPLOYEES
Short-term remuneration
The Company reports short-term remuneration to employees as a cost during the period that the employee carries out the work for which he/she is being compensated.

Compensation after end of employment
For employees in Sweden the ITP 2 plan's defined benefit pension commitment for retirement and family pension is insured through Alecta. For the 2023 financial year, the Company did not have access to the information necessary to report this proportional portion of the plan's commitments, plan assets and costs, and as a result it was not possible to report this as a defined benefit plan. The ITP 2 pension plan secured by an Alecta insurance is therefore reported as a defined contribution plan. The anticipated premiums for the next reporting period for the ITP 2 pension plans covered by Alecta amount to SEK 2.7 million (2023: 2.5). The Group has determined that this portion of the total premiums for the plan and the Group's portion of the total number of active members in the plan are insignificant.

Share-related compensation
A share option program allows the employees to acquire shares in the Company. The fair value of options allotted is recognized as a personnel cost, with a corresponding increase in equity. The fair value is calculated at the time of allotment and distributed over the vesting period.

The cost reported corresponds to the fair value of an estimate of the number of options expected to vest, taking into consideration terms of service, performance and market conditions. This cost is adjusted in subsequent periods so that it finally reflects the actual number of options vested. However, it is not adjusted when forfeiture is due only to the conditions relating to the market not being fulfilled.

Social security charges relating to equity-related instruments are expensed over the vesting periods for the options. The provision for social security charges is based on the fair value of the options on the reporting date.

DISCLOSURE OF RELATED PARTY TRANSACTIONS
For information about benefits to senior executives, see note 4. Otherwise there are no transactions with related parties, in accordance with IAS 24, to report.

LEASES
When an agreement is entered into, the Group assesses whether the agreement is – or includes – a lease. An agreement is, or includes, a lease if the agreement conveys a right to use an identified asset for a period of time in exchange for consideration.

The Group reports a right of use asset and a lease liability when the lease begins. The right of use asset is measured initially at acquisition value, consisting of the initial value of the lease liability plus lease payments that are made on or before the start date as well as any initial direct expenses.

The right of use asset is depreciated on a straight-line basis from the start date until the end of the asset's useful life or the end of the lease term, whichever is the earlier. In the Group's case, this is normally the end of the lease term.

The lease liability, which is divided into a non-current and a current portion, is measured initially at the present value of the remaining lease payments over the assessed term of the lease. The term of the lease is the non-cancellable period plus additional periods in the lease if, at the time the lease commences, it is considered reasonably certain that such options will be exercised.

The lease payments are normally discounted using the Group's incremental borrowing rate, which in addition to the Group's credit risk reflects the term and currency of the lease in question as well as the quality of the underlying asset intended as security. The lease liability encompasses the present value of fixed payments, index- or price-linked variable lease payments, any residual value guarantees that are expected to be paid and penalties for termination of the lease.

The lease liability for the Group's premises where the rent is index-linked is calculated as the rent that applies at the end of the reporting period in question. On this date the liability is adjusted, with corresponding adjustment of the carrying amount of the right of use asset. Similarily, the values of the liability and asset are adjusted in conjunction with reassessment of the lease term.

The Group presents right of use assets and lease liabilities on separate lines in the statement of financial position. No right of use asset or lease liability is recognized for leases with a term of 12 months or less, or where the underlying asset is of low value (less than SEK 50 thousand). Lease payments for these are expensed on a straight-line basis over the term of the lease.

TAXES

Deferred tax shall be reported in the balance sheet, which means that deferred tax is calculated for all identified temporary differences between, on the one hand, the fiscal value of assets and liabilities, and on the other hand, their reported value.

INTANGIBLE FIXED ASSETS

Externally acquired technology licenses that can be used broadly in the operation have been capitalized. These technology licenses supplement the proprietary technology platform where they are expected to offer competitive advantages. Cash payment for the acquisitions is capitalized taking into account the fact that a market value exists since the price was arrived at through negotiation between two independent parties. Such intangible assets are amortized over their estimated useful lives. The Company is conservative in its estimate of the usage period of acquired intangible assets, taking into account the constant, rapid development within the biotech industry. Such assets are therefore amortized over a period of up to 5 years.

TANGIBLE FIXED ASSETS

Owned assets

Tangible fixed assets are valued at the acquisition value less accumulated depreciation. Tangible fixed assets are depreciated or amortized according to the straight-line method over the expected useful life of the assets. The useful life assigned to an asset is evaluated on an ongoing basis and changed if necessary.

Depreciation/amortization according to plan is as follows:

- Equipment 5 years
- Investments in rented premises 5 years

INVENTORIES

Inventories are valued according to the lowest value principle and the first in, first out (FIFO) method. This means that the inventories are reported at the lowest of the acquisition value according to the FIFO method and the actual value.

IMPAIRMENT

The carrying amounts of the Group's assets are tested for impairment if there is indication of impairment.

Impairment test of tangible and intangible assets and shares in subsidiaries, etc.

If there is any indication of impairment, the asset's recoverable value is calculated according to IAS 36 (see below). If it is not possible to establish material independent cash flows for an individual asset, when assessing these assets the impairment requirement will be grouped at the lowest level at which it is possible to identify material independent cash flows (a so-called cash generating unit). Taking into account the specific nature of the business, BioInvent regards the entire business as one cash generating unit.

A significant portion of the reported assets is used to generate the Company's total cash flow. Accordingly, if an asset cannot be assessed separately, it will be assessed with all assets included in the cash-generating unit.

Impairment of financial assets

Reserves for expected credit losses are calculated and recognized for the financial assets measured at amortized cost. Reserves for credit losses are initially calculated and recognized based on 12 months' expected credit losses. For accounts receivable that include a significant financing component a simplified method is applied, and reserves for credit losses are calculated and recognized based on expected credit losses for the full remaining term irrespective of whether there has been a material increase in risk.

TRANSACTIONS IN FOREIGN CURRENCIES

The consolidated financial statements are presented in Swedish kronor, which is the Company's functional and reporting currency. Transactions in foreign currencies are translated when they are entered in the accounts into the reporting currency, according to the spot rate on the transaction day. Receivables and liabilities in foreign currencies have been translated at the closing day exchange rate. Exchange rate gains and losses on operating receivables and liabilities are charged to the operating loss. Gains and losses on financial receivables and liabilities are reported as financial items.

FINANCIAL INSTRUMENTS

A financial instrument is any contract that gives rise to a financial asset, a financial liability or an equity instrument in another Company. For BioInvent this encompasses cash and cash equivalents, current and long-term investments, accounts receivable, other receivables, accounts payable, other liabilities, accrued expenses and derivative instruments. Cash and cash equivalents consist of cash and bank balances as well as short-term investments with a maturity of less than three months. Current investments comprise investments with a maturity of more than three months but less than 12 months.

Recognition and measurement at initial recognition

At initial recognition financial instruments are measured at fair value plus or minus transaction costsAccounts receivable (without a significant financing component) are initially recognized at the transaction price established in accordance with IFRS 15.

Classification and subsequent measurement of financial assets
All the Group's financial assets, with the exception of derivative instruments, are recognized at amortized cost. This also applies to the holding of corporate and bank certificates/-bonds as these are held until maturity, and at certain times give rise to cash flows that are only payments of principal amounts and interest on the outstanding principal amount. Derivatives which are assets are recognized at fair value through profit or loss.

Classification and subsequent measurement of financial liabilities
All the Group's financial liabilities, with the exception of derivative instruments, are recognized at amortized cost. Derivatives which are liabilities are recognized at fair value through profit or loss.

HEDGE ACCOUNTING
Currency forward contracts are used to hedge receivables or liabilities against exchange risk. Both the underlying receivable or liability and the currency forward contract are reported at the exchange rate on the balance sheet date and exchange rate differences are recognized through profit or loss for the year. There is therefore no need for any special hedge accounting in the financial statements to reflect the financing hedging. Exchange rate differences on receivables and liabilities relating to operations are recognized in "Operating loss," while exchange rate differences on financial receivables and liabilities are recognized in "Net financial items".

Note 2 Judgements and estimates in the financial statements

Preparing financial reports according to IFRS requires that management makes judgements and estimates as well as assumptions that affect the application of the accounting policies and the reported amounts of assets, liabilities, income and expenses. Actual outcomes may differ from these judgements and estimates. Estimates and assumptions are reviewed periodically. Changes to estimates are recognized in the period when the change is made if the change only affected that period. If the change affects current and future periods, it is recognized in the period when the change is made and in future periods.

Critical estimates and judgments made in applying the Company's accounting policies are described below.

RECOGNITION OF REVENUE
The Company's recognition of revenue requires judgments by management whether important contract terms have been met when milestone payments are received, the timing of revenue recognition of license fees and external development and manufacturing services, as well as possibilities to receive payment of invoiced receivables.

Note 3 Net revenues, fixed assets and investment activities

Revenue reported under *Net sales* consists entirely of revenue from contracts with collaboration partners.
Other operating income includes received financial support, for example Swedish grants, as well as exchange gains

Benefits for senior executives

Principles
The Annual General Meeting resolves on remuneration for Board Members, including remuneration for committee work, based on the proposal from the Nominating Committee.

Benefits for CEO and other senior executives were determined in accordance with the 2022 Annual General Meeting. The Board determines the fixed salary of the CEO annually. The Board's Remuneration Committee determines the fixed salary of other senior executives annually. In addition to a fixed salary, variable remuneration may be payable according to the incentive scheme described below.

BioInvent's program for variable remuneration for the CEO and other senior executives is performance-related and can amount to 0–50 percent of the fixed annual cash salary. The performance related components in the current program, for the period January 1–December 31, 2024, are based primarily on high expectations for technical and commercial milestones in proprietary drug projects. The Board of Directors resolved in February 2024 to pay SEK 1,161 thousand to CEO Martin Welschof and SEK 3,282 thousand to other senior executives for the period January 1–December 31, 2023. Variable remuneration is pensionable income.

The Company has provided a retention bonus to the CEO for the period October 1, 2021 to September 30, 2024. The retention bonus amounts to SEK 249 thousand (net after income tax), and will be paid out after the bonus period. Receipt of the retention bonus required the corresponding acquisition of BioInvent shares in 2022 to be held during the three-year period. The cost in 2023 amounted to SEK 176 thousand.

In addition, senior executives are covered by employee stock option incentive programs, described on pages 61-62.

1) Excluding Chief Business Officer

Benefits for the Board and CEO

The AGM 2023 resolved that the Board's fee shall amount to SEK 782.5 thousand to the Chairman of the Board, SEK 500 thousand to a vice chairman of the Board and SEK 425 thousand to each of the other Board members, who are not employed by the company. In addition hereto, the AGM resolved on fees for committee work of (i) SEK 70 thousand to the Chairman of the Audit Committee and SEK 50 thousand to other members of the Audit Committee, (ii) SEK 35 thousand to the Chairman of the Remuneration Committee and SEK 25 thousand to other members of the Remuneration Committee, and (iii) SEK 70 thousand to the Chairman of the R&D Committee and SEK 50 thousand to other members of the R&D Committee.

Martin Welschof, CEO has received a fixed gross cash salary of SEK 2,867 thousand and SEK 1,337 thousand in variable remuneration (including retention bonus of SEK 176 thousand), as well as SEK 103 thousand in other benefits. The total cost for pension benefits amounted to SEK 860 thousand. He is covered by pension benefits of 30 percent of the fixed annual cash salary. Retirement age is 65. The CEO and the Company have a mutual period of notice of six months. If notice is given by the Company, the CEO is entitled to redundancy pay equivalent to 12 monthly salaries. Redundancy pay is not deducted from other income. If the CEO resigns, no redundancy pay is payable. If a change of control occurs and the CEO's position is terminated by the Company within 12 months from such event, the CEO will receive a separate severance payment equivalent to 12 months fixed salaries. In 2023, the CEO vested 18,000 options in Option Program 2022/2024, and 18,000 in Option Program 2023/2025.

CEO Martin Welschof's wife, Mona Welschof, has been working as VP Clinical Operations at BioInvent since January 1, 2021. Mona Welschof is considered to be a related party to BioInvent, and the payment of the remuneration she receives constitutes a related party transaction. The remuneration has been determined on market terms and has been decided by the Board. In 2023, Mona Welschof received SEK 1,654 thousand in fixed gross cash salary, SEK 376 thousand in variable remuneration, and SEK 502 thousand in pension benefits. In 2023, Mona Welschof vested 1,650 options in Option Program 2022/2024, and 1,650 options in Option Program 2023/2024.

Benefits for other senior executives

Other senior executives are the individuals who, in addition to the CEO, are part of senior management. Employees residing in Sweden are covered by the prevailing ITP plan. Employees residing outside Sweden, or who are foreign nationals and have their main pension in a country other than Sweden, may be offered other pension solutions that are reasonable in the relevant country, provided that the solution is a defined contribution pension plan. The Company and the other senior executives have a mutual period of notice of six months. Other senior executives are not entitled to redundancy pay over and above the payment of salaries during the period of notice. If a change of control occurs and the executive's position is terminated by the Company within 12 months from such event, the executive will receive a separate severance payment equivalent to 6-12 months fixed salaries and, in some instances, also average of historic annual bonus.

Other senior executives, except the Chief Business Officer, received a fixed gross cash salary of SEK 10,500 thousand. SEK 3,282 thousand was received in variable remuneration, as well as SEK 161 thousand in other benefits. The total pension costs relating to other senior executives amounted to SEK 2,356 thousand. In 2023, other senior executives, except the Chief Business Officer, vested 45,000 options in Option Program 2022/2024, and 49,741 in Option Program 2023/2025. The Chief Business Officer, is a senior executive since 1 June 2022, and works for BioInvent as a consultant, and received from January-December 2023 a consulting fee of SEK 4,962 thousand.

Option Program 2019/2025

The 2019 Annual General Meeting resolved to adopt a long-term incentive program in the form of an option program comprising the management group. The option program comprise a maximum of 3,971,000 stock options and the participants may vest options free of charge based on performance and continued employment. Each option entitles the holder to subscribe for 0.04 new share in BioInvent during the period from the day of release of the company's year-end report for the financial year 2022 up to and including December 15, 2025. The subscription price per share shall be SEK 77.25. Subscription price and number of shares that each option entitles to are recalculated pursuant to the rights issue and reverse share split carried out in 2020.

The CEO vested 1/4 of the options during each of the financial years 2019, 2020, 2021 and 2022, based on performance and continued employment. Other members of the management group will vest 1/3 of the options during each of the financial years 2020, 2021 and 2022, based on performance and continued employment. The performance criteria for the participants will be based on the same criteria as for the annual bonus, which principally are based on fixed technical milepost-criteria in projects, criteria for development of the project portfolio and other pre-determined criteria attributable to the business. The gross benefit under the program is capped to MSEK 15 for the CEO and MSEK 10 for other participants.

To enable the company's delivery of shares pursuant to the option program and to secure costs connected therewith, primarily social security charges, the 2019 AGM resolved on a directed issue of maximum of 5,040,000 warrants and approval of transfer of warrants. If fully exercised, Option Program 2019/2025 will represent a dilution of 0.2 percent of the shares in the Company. Vesting in 2019 amounted to 221,619 options, 1,008,141 in 2020, 1,008,141 in 2021 and 1,008,141 in 2022. As of December 31, 2023, 3,246,042 stock options were outstanding.

Fair value per option was valued at the time the options were granted. The data below was used in the calculation, which consists of the input data that applied before the rights issue and reverse share split carried out in 2020 (when each option entitled to subscription of one new share).

Option Program 2019/2025

Fair value per option (SEK), Black & Scholes-model when granted in 2019	0.65
Share price for underlying shares (SEK)	2.26
Subscription price (SEK)	3.16
Estimated life of the option	5.12 year
Risk-free interest rate during the life of the option	-0.07%
Assumed volatility	45.0%
Expected dividends	-

The costs for the program amounted to SEK - thousand (312), and refer to both the estimated cost of the value of the employees' service during the period, valued at market value at the time of the allocation, and the portion of the estimated social security fees earned during the period. BioInvent will pay social security fees on the gain that may result from the exercise of the employee options, estimated as the difference between the subscription price of the employee stock option and the market value of the shares.

Option Program 2022/2024

The 2022 AGM resolved to approve the Board's proposal regarding the implementation of a long-term incentive program in the form of an option program comprising all employees and other key persons in the company. The option program comprise a maximum of 820,000 stock options and the participants may be allotted options free of charge based on performance and continued employment. Each option entitles the holder to subscribe for one new share in BioInvent during the period from the day of release of the company's year-end report for the financial year 2024 up to and including 28 February 2026. The subscription price per share shall be SEK 56.21.

Options granted will vest by 1/3 during each of the financial years 2022, 2023 and 2024, based on performance and continued employment with, or assignment for, BioInvent. The performance criteria for vesting will be based on the same criteria as for management's annual bonus, which principally are based on fixed technical milestone-criteria in projects, criteria for development of the project portfolio and other pre-determined criteria attributable to the business.

To enable the company's delivery of shares pursuant to the option program and to secure costs connected therewith, primarily social security charges, the AGM resolved on a directed issue of maximum of 951,200 warrants, and approval of transfer of warrants. If fully exercised, Option Program 2022/2024 will represent a dilution of 1.0 percent of the shares in the Company. Vesting in 2022 amounted to 201,109 options. Vesting in 2023 amounted to 176,148 options. As of December 31, 2023, 567,089 stock options were outstanding.

Fair value per option was valued at the time the options were granted.

Option Program 2022/2024

Fair value per option (SEK), Black & Scholes-model when granted in 2022	10.31
Share price for underlying shares (SEK)	41.65
Subscription price (SEK)	56.21
Estimated life of the option	3.31 year
Risk-free interest rate during the life of the option	1.50%
Assumed volatility	46.5%
Expected dividends	-

The costs for the program amounted to SEK 1,833 thousand (1,477), and refer to both the estimated cost of the value of the employees' service during the period, valued at market value at the time of the allocation, and the portion of the estimated social security fees earned during the period. BioInvent will pay social security fees on the gain that may result from the exercise of the employee options, estimated as the difference between the subscription price of the employee stock option and the market value of the shares.

Option Program 2023/2025

The 2023 AGM resolved to approve the Board's proposal regarding the implementation of a long-term incentive program in the form of an option program comprising all employees and other key persons in the company. The option program comprise a maximum of 817,500 stock options and the participants may be allotted options free of charge based on performance and continued employment. Each option entitles the holder to subscribe for one new share in BioInvent during the period from the day of release of the company's year-end report for the financial year 2025 up to and including 28 February 2027. The subscription price per share shall be SEK 34.91.

Options granted will vest by 1/3 during each of the financial years 2023, 2024 and 2025, based on performance and continued employment with, or assignment for, BioInvent. The performance criteria for vesting will be based on the same criteria as for management's annual bonus, which principally are based on fixed technical milestone-criteria in projects, criteria for development of the project portfolio and other pre-determined criteria attributable to the business.

To enable the company's delivery of shares pursuant to the option program and to secure costs connected therewith, primarily social security charges, the AGM resolved on a directed issue of maximum of 948,300 warrants, and approval of transfer of warrants. If fully exercised, Option Program 2023/2025 will represent a dilution of 1.2 percent of the shares in the Company. Vesting in 2023 amounted to 206,629 options. As of December 31, 2023, 685,649 stock options were outstanding.

Fair value per option was valued at the time the options were granted.

Option Program 2023/2025

Fair value per option (SEK), Black & Scholes-model when granted in 2023	6.73
Share price for underlying shares (SEK)	28.80
Subscription price (SEK)	34.91
Estimated life of the option	3.31 year
Risk-free interest rate during the life of the option	2.60%
Assumed volatility	38.1%
Expected dividends	-

The costs for the program amounted to SEK 1,117 thousand (-), and refer to both the estimated cost of the value of the employees' service during the period, valued at market value at the time of the allocation, and the portion of the estimated social security fees earned during the period. BioInvent will pay social security fees on the gain that may result from the exercise of the employee options, estimated as the difference between the subscription price of the employee stock option and the market value of the shares.

Note 5 Information about auditors' fees

	Group		Parent Company

1) Effect of permanent establishment in Norway.

There are no substantial deferred taxes that relate to temporary differences as of December 31, 2023. Deferred tax assets relating to unutilized loss carry-forwards and deductible temporary differences are only reported if it is likely that they will be utilized against future taxable earnings. The Group's accumulated unutilized loss carryforwards amounted to SEK 2 488 million as of December 31, 2023. It is unclear when these loss carry-forwards will be utilized for deduction against taxable earnings. Deferred income tax recoverable relating to loss carry-forward is therefore not reported at any value.

Note 13 Earnings per share

Earnings per share before dilution

SEK thousand	2023	2022
Profit/loss for the year	-330,304	-42,503
Average number of outstanding shares (thousand)	65,767	61,521
Earnings per share before dilution, SEK	**-5.02**	**-0.69**

Earnings per share after dilution

SEK thousand	2023	2022
Profit/loss for the year	-330,304	-42,503
Average number of outstanding shares (thousand)	65,767	61,521
Earnings per share after dilution, SEK	**-5.02**	**-0.69**

Earnings per share before dilution is based on profit/loss for the year attributable to Parent Company shareholders and a weighted average of the number of outstanding shares.

Diluted earnings per share is based on profit/loss for the year attributable to Parent Company shareholders and a weighted average of the number of outstanding shares plus the dilutive effects for potential shares. Option Program 2019/2025 entitles the holder to acquire 0.04 new share in BioInvent for a subscription price of SEK 77.25 from the day of release of the company's year-end report for the financial year 2022 up to and including December 15, 2025. Option Program 2022/2024 entitles the holder to acquire one new share in BioInvent for a subscription price of SEK 56.21 from the day of release of the company's year-end report for the financial year 2024 up to and including February 28, 2026. Option Program 2023/2025 entitles the holder to acquire one new share in BioInvent for a subscription price of SEK 34.91 from the day of release of the company's year-end report for the financial year 2025 up to and including February 28, 2027.

An average share price of SEK 18.34 per share was used to determine whether a dilution effect exists for 2023. Option Program 2019/2025, Option Program 2022/2024, and Option Program 2023/2025 have no dilution effect and are therefore excluded from the earnings per share after dilution calculation. The Company reported a loss for the period and accordingly there is no dilution effect. If in the future the share price exceeds the subscription price and the Company reports a profit, these options may lead to dilution.

Note 14 Intangible fixed assets

Note 18 Financial risks

Responsibility for the Group's financial transactions and risks is managed by the Company's financial function. The objective is to provide cost effective financing and to minimize negative effects on the Group's performance arising from market risks.

Currency risks
Bioinvent's currency exposure increases as development projects are moved forward in the value chain, e.g. costs of clinical trials and toxicological studies increase. These services are often carried out abroad and are paid for in foreign currencies.

Currency flows in conjunction with the purchase and sale of goods and services in currencies other than SEK generate transaction exposure. Currency exposure is primarily eliminated by matching flows in the same currency. When matching of underlying receivables and liabilities is not possible, the currency exposure is eliminated through forward contracts.

In 2023 62 percent (85) of revenues were invoiced in foreign currencies. Around 54 percent (55) of costs in 2023 were invoiced in foreign currencies, mainly in GBP and EUR. Realized forward contracts for flows in 2023 had an effect on the operating income in the amount of SEK +1.0 (+0.9) million. A sensitivity analysis shows that the Company's operating profit/loss in 2023 before hedging transactions would have been affected in the amount of SEK -0.4 million if the Swedish krona had weakened by 1 percent compared with GBP and in the amount of SEK -1.7 million if the Swedish krona had weakened by 1 percent compared with EUR.

Interest risk
BioInvent's exposure to market risk for changes in interest levels is related to bank balances and corporate and bank certificates/-bonds. To reduce the effect of the fluctuation in market interest rates, the excess liquidity is invested with different maturities so that the investments mature on a regular basis over the subsequent two-year period.

The average interest rate in 2023 was 2.9 percent (0.6). A change in the interest rate of 1 percent in 2023 would have affected the net interest income by SEK 14.1 million.

Liquidity and credit risk
Liquidity risk is the risk of the Company experiencing difficulties, in future, in fulfilling its obligations associated with financial liabilities. The financial function provides the Board of Directors and management with ongoing liquidity forecasts.

Liquidity risk is minimized by liquidity planning and investment in financial instruments that can be redeemed at short notice. Only investments in interest bearing securities with low credit risk and high liquidity are permitted. There are also limitations in the amount that can be invested with an individual counterparty to avoid concentration of credit risk.

In accordance with the Company's financial policy excess liquidity is placed in bank accounts and invested in corporate and bank certificates/-bonds with a minimum BBB rating (S&P). These carry fixed interest rates and may have terms of up to two years.

BioInvent works with established and creditworthy counterparties. A credit assessment is carried out for all partners who will receive some form of credit. In addition, BioInvent monitors receivables on a constant basis. The Company's exposure to doubtful receivables has historically been very low.

Note 19 Shareholders' equity

Share capital	Ordinary shares	
Thousands of shares	2023	2022
Issued as of January 1	64,968	58,471
Directed share issue	836	6,497
Issued as of December 31	**65,804**	**64,968**

The share capital as of December 31, 2023 consists of 65,804,362 shares and the share's ratio value is 0.20. Shareholders holding ordinary shares are entitled to dividends. Each share carries one vote at the Annual General Meeting.

The directed new share issue carried out in January 2023 raised SEK 31.3 million before issue expenses and SEK 31.0 million after issue expenses. The directed new share issue carried out in July 2022 raised SEK 298.9 million before issue expenses and SEK 279.8 million after issue expenses.

Other allocated capital
Refers to shareholders' equity contributed by the shareholders over and above share capital.

Retained earnings including profit/loss for the year
Retained earnings including profit/loss for the year includes the accumulated profit/loss of the Parent Company and subsidiary.

Proposed appropriation of profits
At the disposal of the Annual General Meeting: Share premium reserve of SEK 1,597,059,808 retained earnings of SEK 2,950,000 and profit/loss for the year of SEK -330,130,119. The Board of Directors propose that profits at the disposal of SEK 1,269,879,689 is carried forward. Thus, it is proposed that no dividend be given for the financial year 2023.

Capital management
According to the Board's policy, the Group's financial goal is to have a strong capital structure and financial stability enabling the Company to retain the trust of investors and credit issuers in the market, and to have a foundation for continued business growth. Capital is defined as total shareholders' equity. Bearing in mind the Company's focus, no specific debt/equity ratio target is defined.

Amounts reported in the statement of cash flows for the Group

SEK thousand	2023	2022
Total cash flows attributable to leases	-8,454	-7,012

The above cash flow includes both the amounts of leases that are reported as lease liabilities and amounts of leases of low value.

Leases for premises

The Group's leases for premises have been signed with Wihlborgs Fastigheter. The leases have a term of 3-5 years. These leases generally include an option to renew the lease for a further three years at the end of the lease period. Usually the lease is automatically extended by three years unless notice to terminate the lease is given in writing at least 12 months prior to the end of the lease period.

Leases for premises include lease payments that are based on changes in the rental price index. The leases also require the Group to pay charges relating to property taxes. These amounts are set annually.

Note 23 Events after the end of the financial year

- (R) CASI Pharmaceuticals reports positive Phase 1 interim data for BI-1206 in the treatment of recurrent/treatment-resistant indolent non-Hodgkin's lymphoma in China
- BioInvent to evaluate BI-1206 in combination with rituximab and Calquence
- BioInvent regains rights to immuno-oncology targets from Exelixis

(R)= Regulatory event

Note 24 Information about the Parent Company

BioInvent International AB (publ) is a limited liability Company registered in Sweden. The registered office is in the Lund municipality. The visiting address is Ideongatan 1, Lund and the postal address is SE-223 70 Lund. The consolidated accounts consist of the Parent Company BioInvent International AB and the wholly-owned subsidiary BioInvent Finans AB.

Declaration by the Board of Directors and the CEO

The undersigned certify that the consolidated accounts and the annual report have been prepared in accordance with International Financial Reporting Standards (IFRS), as adopted for use in the European Union, and generally accepted accounting principles respectively, and give a true and fair view of the financial positions and results of the Group and the Company, and that the Directors' reports of the Group and the Company give a fair review of the development of the operations, financial positions and results of the Group and the Company and describes substantial risks and uncertainties that the Group companies faces.

The annual report and the consolidated accounts were approved for publication by the Board and the CEO on April 4, 2024.

Auditor's Report

To the general meeting of the shareholders of BioInvent International AB (publ), corp. id 556537-7263

REPORT ON THE ANNUAL ACCOUNTS AND CONSOLIDATED ACCOUNTS

OPINIONS

We have audited the annual accounts and consolidated accounts of Bioinvent International (publ) for the year 2023. The annual accounts and consolidated accounts of the company are included on pages 37-70 in this document.

In our opinion, the annual accounts have been prepared in accordance with the Annual Accounts Act, and present fairly, in all material respects, the financial position of the parent company as of 31 December 2023 and its financial performance and cash flow for the year then ended in accordance with the Annual Accounts Act. The consolidated accounts have been prepared in accordancea with the Annual Accounts Act and present fairly, in all material respects, the financial position of the group as of 31 December 2023 and their financial performance and cash flow for the year then ended in accordance with IFRS Accounting Standards, as adopted by the EU, and the Annual Accounts Act. The statutory administration report is consistent with the other parts of the annual accounts and consolidated accounts.

We therefore recommend that the general meeting of shareholders adopts the income statement and balance sheet for the parent company and the statement of comprehensive income and statement of financial position for the group.

Our opinions in this report on the the annual accounts and consolidated accounts are consistent with the content of the additional report that has been submitted to the parent company's audit committee in accordance with the Audit Regulation (537/2014) Article 11.

BASIS FOR OPINIONS

We conducted our audit in accordance with International Standards on Auditing (ISA) and generally accepted auditing standards in Sweden. Our responsibilities under those standards are further described in the Auditor's Responsibilities section. We are independent of the parent company and the group in accordance with professional ethics for accountants in Sweden and have otherwise fulfilled our ethical responsibilities in accordance with these requirements.This includes that, based on the best of our knowledge and belief, no prohibited services referred to in the Audit Regulation (537/2014) Article 5.1 have been provided to the audited company or, where applicable, its parent company or its controlled companies within the EU.

We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our opinions.

KEY AUDIT MATTERS

Key audit matters of the audit are those matters that, in our professional judgment, were of most significance in our audit of the annual accounts and consolidated accounts of the current period. These matters were addressed in the context of our audit of, and in forming our opinion thereon, the annual accounts and consolidated accounts as a whole, but we do not provide a separate opinion on these matters.

REVENUE RECOGNITION

See disclosure 2 and accounting principles on pages 55-56 in the annual account and consolidated accounts for detailed information and description of the matter.

DESCRIPTION OF KEY AUDIT MATTER

The revenues of the Company consist of:

- Revenue from collaboration agreements associated with out-licensing of proprietary projects
- Revenue from technology licenses and
- Revenue from external development projects.

The structure and terms of these agreements and partnerships vary, and revenue is accounted for both at one point in time and over time. As these agreements often contain several performance obligations, there is a risk that these are not correctly identified and that revenues will be recognized in the wrong period.

RESPONSE IN THE AUDIT

Accounting of revenue from agreements with customers has been a focus are for our audit. Our assessment of revenue recognition focuses on the following critical assessment made by executive management:

- Identification of performance obligations in contracts with customers
- Assessment of whether the performance obligations are distinct from each other or not
- Assessment of whether the performance obligations are satisfied over time or at a single point in time
- Possibilities to receive payments for the invoiced receivables.

In addition to having taken part of management's assessment above, we have also verified revenue items on a sample basis against underlying agreements, the internal project accounting of the Company and/or supporting documents for payments verifying that the Company has received the revenue. Milestone payments recognised as revenue have been confirmed against confirmation from the counterparty that the milestone has been reached or by verifying that the counterparty has paid the milestone fee.

OTHER INFORMATION THAN THE ANNUAL ACCOUNTS AND CONSOLIDATED ACCOUNTS

This document also contains other information than the annual accounts and consolidated accounts and is found on pages 1-36, and 79-81. The other information comprises also of the remuneration report which we obtained prior to the date of this auditor's report. The Board of Directors and the Managing Director are responsible for this other information.

Our opinion on the annual accounts and consolidated accounts does not cover this other information and we do not express any form of assurance conclusion regarding this other information.

In connection with our audit of the annual accounts and consolidated accounts, our responsibility is to read the information identified above and consider whether the information is materially inconsistent with the annual accounts and consolidated accounts. In this procedure we also take into account our knowledge otherwise obtained in the audit and assess whether the information otherwise appears to be materially misstated.

If we, based on the work performed concerning this information, conclude that there is a material misstatement of this other information, we are required to report that fact. We have nothing to report in this regard.

RESPONSIBILITIES OF THE BOARD OF DIRECTORS AND THE MANAGING DIRECTOR

The Board of Directors and the Managing Director are responsible for the preparation of the annual accounts and consolidated accounts and that they give a fair presentation in accordance with the Annual Accounts Act and, concerning the consolidated accounts, in accordance with IFRS Accounting Standards as adopted by the EU. The Board of Directors and the Managing Director are also responsible for such internal control as they determine is necessary to enable the preparation of annual accounts and consolidated accounts that are free from material misstatement, whether due to fraud or error.

In preparing the annual accounts and consolidated accounts The Board of Directors and the Managing Director are responsible for the assessment of the company's and the group's ability to continue as a going concern. They disclose, as applicable, matters related to going concern and using the going concern basis of accounting. The going concern basis of accounting is however not applied if the Board of Directors and the Managing Director intend to liquidate the company, to cease operations, or has no realistic alternative but to do so.

The Audit Committee shall, without prejudice to the Board of Director's responsibilities and tasks in general, among other things oversee the company's financial reporting process.

AUDITOR'S RESPONSIBILITY

Our objectives are to obtain reasonable assurance about whether the annual accounts and consolidated accounts as a whole are free from material misstatement, whether due to fraud or error, and to issue an auditor's report that includes our opinions. Reasonable assurance is a high level of assurance, but is not a guarantee that an audit conducted in accordance with ISAs and generally accepted auditing standards in Sweden will always detect a material misstatement when it exists. Misstatements can arise from fraud or error and are considered material if, individually or in the aggregate, they could reasonably be expected to influence the economic decisions of users taken on the basis of these annual accounts and consolidated accounts.

As part of an audit in accordance with ISAs, we exercise professional judgment and maintain professional scepticism throughout the audit. We also:

- Identify and assess the risks of material misstatement of the annual accounts and consolidated accounts, whether due to fraud or error, design and perform audit procedures responsive to those risks, and obtain audit evidence that is sufficient and appropriate to provide a basis for our opinions. The risk of not detecting a material misstatement resulting from fraud is higher than for one resulting from error, as fraud may involve collusion, forgery, intentional omissions, misrepresentations, or the override of internal control.
- Obtain an understanding of the company's internal control relevant to our audit in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the company's internal control.
- Evaluate the appropriateness of accounting policies used and the reasonableness of accounting estimates and related disclosures made by the Board of Directors and the Managing Director.
- Conclude on the appropriateness of the Board of Directors' and the Managing Director's, use of the going concern basis of accounting in preparing the annual accounts and consolidated accounts. We also draw a conclusion, based on the audit evidence obtained, as to whether any material uncertainty exists related to events or conditions that may cast significant doubt on the company's and the group's ability to continue as a going concern. If we conclude that a material uncertainty exists, we are required to draw attention in our auditor's report to the related disclosures in the annual accounts and consolidated accounts or, if such disclosures are inadequate, to modify our opinion about the annual accounts and consolidated accounts. Our conclusions are based on the audit evidence obtained up to the date of our auditor's report. However, future events or conditions may cause a company and a group to cease to continue as a going concern.
- Evaluate the overall presentation, structure and content of the annual accounts and consolidated accounts, including the disclosures, and whether the annual accounts and consolidated accounts represent the underlying transactions and events in a manner that achieves fair presentation.
- Obtain sufficient and appropriate audit evidence regarding the financial information of the entities or business activities within the group to express an opinion on the consolidated accounts. We are responsible for the direction, supervision and performance of the group audit. We remain solely responsible for our opinions.

We must inform the Board of Directors of, among other matters, the planned scope and timing of the audit. We must also inform of significant audit findings during our audit, including any significant deficiencies in internal control that we identified.

We must also provide the Board of Directors with a statement that we have complied with relevant ethical requirements regarding independence, and to communicate with them all relationships and other matters that may reasonably be thought to bear on our independence, and where applicable, measures that have been taken to eliminate the threats or related safeguards.

From the matters communicated with the Board of Directors, we determine those matters that were of most significance in the audit of the annual accounts and consolidated accounts, including the most important assessed risks for material misstatement, and are therefore the key audit matters. We describe these matters in the auditor's report unless law or regulation precludes disclosure about the matter.

REPORT ON OTHER LEGAL AND REGULATORY REQUIREMENTS

Auditor's audit of the administration and the proposed appropriations of profit or loss

OPINIONS

In addition to our audit of the annual accounts and consolidated accounts, we have also audited the administration of the Board of Directors and the Managing Director of Bioinvent International (publ) for the year 2023 and the proposed appropriations of the company's profit or loss.

We recommend to the general meeting of shareholders that the profit be appropriated in accordance with the proposal in the statutory administration report and that the members of the Board of Directors and the Managing Director be discharged from liability for the financial year.

BASIS FOR OPINIONS

We conducted the audit in accordance with generally accepted auditing standards in Sweden. Our responsibilities under those standards are further described in the Auditor's Responsibilities section. We are independent of the parent company and the group in accordance with professional ethics for accountants in Sweden and have otherwise fulfilled our ethical responsibilities in accordance with these requirements.

We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our opinions.

RESPONSIBILITIES OF THE BOARD OF DIRECTORS AND THE MANAGING DIRECTOR

The Board of Directors is responsible for the proposal for appropriations of the company's profit or loss. At the proposal of a dividend, this includes an assessment of whether the dividend is justifiable considering the requirements which the company's and the group's type of operations, size and risks place on the size of the parent company's and the group's equity, consolidation requirements, liquidity and position in general.

The Board of Directors is responsible for the company's organization and the administration of the company's affairs. This includes among other things continuous assessment of the company's and the group's financial situation and ensuring that the company's organization is designed so that the accounting, management of assets and the company's financial affairs otherwise are controlled in a reassuring manner.

The Managing Director shall manage the ongoing administration according to the Board of Directors' guidelines and instructions and among other matters take measures that are necessary to fulfill the company's accounting in accordance with law and handle the management of assets in a reassuring manner.

AUDITOR'S RESPONSIBILITY

Our objective concerning the audit of the administration, and thereby our opinion about discharge from liability, is to obtain audit evidence to assess with a reasonable degree of assurance whether any member of the Board of Directors or the Managing Director in any material respect:

- has undertaken any action or been guilty of any omission which can give rise to liability to the company, or
- in any other way has acted in contravention of the Companies Act, the Annual Accounts Act or the Articles of Association.

Our objective concerning the audit of the proposed appropriations of the company's profit or loss, and thereby our opinion about this, is to assess with reasonable degree of assurance whether the proposal is in accordance with the Companies Act.

Reasonable assurance is a high level of assurance, but is not a guarantee that an audit conducted in accordance with generally accepted auditing standards in Sweden will always detect actions or omissions that can give rise to liability to the company, or that the proposed appropriations of the company's profit or loss are not in accordance with the Companies Act.

As part of an audit in accordance with generally accepted auditing standards in Sweden, we exercise professional judgment and maintain professional scepticism throughout the audit. The examination of the administration and the proposed appropriations of the company's profit or loss is based primarily on the audit of the accounts. Additional audit procedures performed are based on our professional judgment with starting point in risk and materiality. This means that we focus the examination on such actions, areas and relationships that are material for the operations and where deviations and violations would have particular importance for the company's situation. We examine and test decisions undertaken, support for decisions, actions taken and other circumstances that are relevant to our opinion concerning discharge from liability. As a basis for our opinion on the Board of Directors' proposed appropriations of the company's profit or loss we examined whether the proposal is in accordance with the Companies Act.

THE AUDITOR'S EXAMINATION OF THE ESEF REPORT

OPINION

In addition to our audit of the annual accounts and consolidated accounts, we have also examined that the Board of Directors and the Managing Director have prepared the annual accounts and consolidated accounts in a format that enables uniform electronic reporting (the Esef report) pursuant to Chapter 16, Section 4(a) of the Swedish Securities Market Act (2007:528) for Bioinvent International (publ) for year 2023.

Our examination and our opinion relate only to the statutory requirements.

In our opinion, the Esef report has been prepared in a format that, in all material respects, enables uniform electronic reporting.

BASIS FOR OPINION

We have performed the examination in accordance with FAR's recommendation RevR 18 Examination of the Esef report. Our responsibility under this recommendation is described in more detail in the Auditors' responsibility section. We are independent of Bioinvent International (publ) in accordance with professional ethics for accountants in Sweden and have otherwise fulfilled our ethical responsibilities in accordance with these requirements.

We believe that the evidence we have obtained is sufficient and appropriate to provide a basis for our opinion.

RESPONSIBILITIES OF THE BOARD OF DIRECTORS AND THE MANAGING DIRECTOR

The Board of Directors and the Managing Director are responsible for the preparation of the Esef report in accordance with the Chapter 16, Section 4(a) of the Swedish Securities Market Act (2007:528), and for such internal control that the Board of Directors and the Managing Director determine is necessary to prepare the Esef report without material misstatements, whether due to fraud or error.

AUDITOR'S RESPONSIBILITY

Our responsibility is to obtain reasonable assurance whether the Esef report is in all material respects prepared in a format that meets the requirements of Chapter 16, Section 4(a) of the Swedish Securities Market Act (2007:528), based on the procedures performed.

RevR 18 requires us to plan and execute procedures to achieve reasonable assurance that the Esef report is prepared in a format that meets these requirements.

Reasonable assurance is a high level of assurance, but it is not a guarantee that an engagement carried out according to RevR 18 and generally accepted auditing standards in Sweden will always detect a material misstatement when it exists. Misstatements can arise from fraud or error and are considered material if, individually or in aggregate, they could reasonably be expected to influence the economic decisions of users taken on the basis of the Esef report.

The audit firm applies International Standard on Quality Management 1, which requires the firm to design, implement and operate a system of quality management including policies or procedures regarding compliance with ethical requirements, professional standards and applicable legal and regulatory requirements.

The examination involves obtaining evidence, through various procedures, that the Esef report has been prepared in a format that enables uniform electronic reporting of the annual accounts and consolidated accounts. The procedures selected depend on the auditor's judgment, including the assessment of the risks of material misstatement in the report, whether due to fraud or error. In carrying out this risk assessment, and in order to design procedures that are appropriate in the circumstances, the auditor considers those elements of internal control that are relevant to the preparation of the Esef report by the Board of Directors and the Managing Director, but not for the purpose of expressing an opinion on the effectiveness of those internal controls. The examination also includes an evaluation of the appropriateness and reasonableness of the assumptions made by the Board of Directors and the Managing Director.

The procedures mainly include a validation that the Esef report has been prepared in a valid XHTML format and a reconciliation of the Esef report with the audited annual accounts and consolidated accounts.

Furthermore, the procedures also include an assessment of whether the consolidated statement of financial performance, financial position, changes in equity, cash flow and disclosures in the Esef report have been marked with iXBRL in accordance with what follows from the Esef regulation.

KPMG AB, Box 227, 201 22 , Malmö, was appointed auditor of Bioinvent International (publ) by the general meeting of the shareholders on the 27 April 2023. KPMG AB or auditors operating at KPMG AB have been the company's auditor since 2012.

Malmö April 4, 2024

KPMG AB

Linda Bengtsson
Authorized Public Accountant

Corporate governance report

BioInvent applies the Swedish Corporate Governance Code ("the Code"). In addition to the Code, BioInvent also complies with applicable rules in the Swedish Companies Act, rules and recommendations ensuing from the Company's listing on Nasdaq Stockholm, and good practices on the stock market.

This corporate governance report has been prepared in accordance with the provisions of the Annual Accounts Act and the Code. The corporate governance report has been prepared as a document separate from the Annual Report and is as such not part of the formal Annual Report documentation. The corporate governance report has been reviewed by the Company's auditor in accordance with the provisions of the Annual Accounts Act. The auditor's statement is attached to the report.

GENERAL MEETINGS

The Annual General Meeting ("AGM"), or as applicable, the Extraordinary General Meeting, is the supreme decision-making body of BioInvent in which all shareholders are entitled to participate. The Articles of Association contain no restrictions regarding the number of votes that may be cast by a shareholder at a General Meeting and no special provisions regarding amendments of the Articles of Association.

The AGM addresses the Company's progress and resolves on a number of key issues, such as the adoption of the income statement and balance sheet, allocation of result, discharge from liability for the Board of Directors and the CEO, and the election of Board of Directors until the next AGM. Every second year, an auditor for the Company is elected for a term of two years and the AGM resolves on compensation for the auditor.

At the AGM 2023, the Board of Directors was authorized to resolve on the issue of new shares, on one or several occasions during the period up to the next AGM. The number of shares to be issued by virtue of the authorization shall not entail a dilution effect of more than 20 percent of the registered share capital after completed issue.

The AGM 2023 was held on April 27 and the minutes are available on BioInvent's website. The AGM 2024 will be held in Lund on May 3 at 4 p.m. Notification to attend the AGM is published no earlier than six and no later than four weeks before the Meeting. Shareholders who wish to submit a matter for consideration at the AGM should, to ensure that the request can be considered, send such request by post to BioInvent International AB (publ), Attn: Stefan Ericsson, SE-223 70 Lund, Sweden, in good time before the notification to attend the Meeting is issued and no later than seven weeks before the Meeting.

NOMINATION COMMITTEE

In accordance with the resolution of the AGM, the Nomination Committee shall consist of the Chairman of the Board as the convener, and a representative for each of the Company's three largest shareholders as of August 31 each calendar year.

The Nomination Committee shall prepare all the elections and proposals of remuneration that come into question from the Nomination Committee has been appointed until a new Nomination Committee is appointed. The Nomination Committee is tasked with preparing proposals to present to the AGM regarding the election of Chairman of the General Meeting, election of Chairman of the Board and other Board members, resolution on remuneration of the Board of Directors, shared among the Chairman, other Board members and possible compensation for committee work and, where applicable, election of auditors and auditor's fees.

The Nomination Committee for the AGM 2023 consisted of Dharminder Chahal, appointed by Van Herk Investments B.V., Laura Feinleib, appointed by Redmile Group, LLC, Ivo Staijen, appointed by HBM Partners, and Leonard Kruimer, Chairman of the Board. The Nomination Committee formulated proposals regarding the Chairman of the General Meeting, the composition of the Board of Directors, and remuneration of the Board of Directors. The Nomination Committee had two meetings, of which all where meetings per video link. The committee members also had additional telephone contacts. No fees have been paid to the members of the Nomination Committee.

Pursuant to the Nomination Committees reasoned statement ahead of the AGM 2023, the Nomination Committee has, when preparing its proposal for Board members, applied Section 4.1 of the Code as diversity policy. The goal of the policy is that the Board of Directors shall have a composition appropriate to the Company's operations, phase of development and other relevant circumstances, characterized of diversity and breadth of qualifications, experience and background and that the Company shall strive for gender balance. The AGM 2023 resolved to elect Board members in accordance with the Nomination Committee's proposal, which resulted in re-election of all Board members. However, when preparing its proposal, the Nomination Committee concluded that the composition of the Board of Directors regrettably not meet the ambition level of 60/40 for representation of the underrepresented gender, but noted that one of two of the employee representatives appointed, at the time when the nomination committee submitted its proposal, to the Board of Directors was a woman. At the AGM 2023, eight Board members were elected, whereof two were women.

The composition of the Nomination Committee for the AGM 2024 was presented on BioInvent's website on October 24, 2023. The Nomination Committee for the AGM 2024 consists of Laura Feinleib, appointed by Redmile Group, LLC, Dharminder Chahal, appointed by Van Herk Investments B.V., Wouter Joustra appointed by Forbion, and Leonard Kruimer, Chairman of the Board. No fees have been paid to the members of the Nomination Committee.

SHAREHOLDERS

On December 31, 2023, BioInvent had 9,108 shareholders. The shareholders Redmile Group, LLC. and Van Herk Investments B.V. has a shareholding amounting to 10 percent or more of the number of votes in BioInvent. More information about the ownership structure is presented on page 41.

THE BOARD OF DIRECTORS AND ITS WORK

BioInvent's Board of Directors is elected annually at the AGM for the period until the next AGM and shall, according to the Articles of Association, consist of no less than five and no more than nine members. The Articles of Association contain no special provisions regarding the election or dismissal of Board members.

The AGM 2023 discharged the Board members and the CEO from liability and re-elected the Board members Natalie Berner, Kristoffer Bissessar, Thomas Hecht, Leonard Kruimer, Nanna Lüneborg, Vincent Ossipow and Bernd Seizinger and elected Erik

Esveld as new Board member. Leonard Kruimer was re-elected Chairman of the Board.

The Board of Directors consists of eight directors elected by the General Meeting, as well as the employee representatives Elin Birgersson and Martin Pålsson, and the employee deputy Vessela Alexieva.

The Board of Directors is presented on pages 33-34. All Board members elected by the General Meeting are independent in relation to the Company, senior executives, and major shareholders, except for Natalie Berner and Erik Esveld who is considered dependent in relation to major shareholders.

The AGM 2023 resolved that the Board's fee shall amount to SEK 782,500 to the Chairman of the Board, SEK 500,000 to a vice chairman of the Board and SEK 425,000 to each of the other Board members, who are not employed by the Company. In addition hereto, the AGM resolved on fees for committee work of (i) SEK 70,000 to the Chairman of the Audit Committee and SEK 50,000 to other members of the Audit Committee, (ii) SEK 35,000 to the Chairman of the Remuneration Committee and SEK 25,000 to other members of the Remuneration Committee, and (iii) SEK 70,000 to the Chairman of the R&D Committee and SEK 50,000 to other members of the R&D Committee. Fee for committee work shall not be paid to the Chairman of the Board.

The work of the Board of Directors is governed by rules of procedure which are revised and adopted by the Board of Directors at least once a year. The rules of procedure primarily consist of directions for the Board of Directors work, instructions for the division of duties between the Board of Directors and the CEO and instructions for the financial reporting.

In 2023 the Board of Directors held seven ordinary meetings and three extraordinary meetings. The Board of Directors met with the Company's auditor on two occasions, including one occasion without the presence of the CEO or other persons from the senior management. Attorney Madeleine Rydberger, Mannheimer Swartling Advokatbyrå, has served as the secretary of the Board of Directors during the year. Regular items on the agenda at the meetings included monitoring of the operation in relation to the Company's budget and strategic plan. In addition, the Board of Directors has considered and resolved on issues pertaining to research and development, financing, intellectual property, strategic focus and planning, the budget, essential agreements, audit, financial reporting, and compensation related issues.

The Board of Directors conducts an annual structured evaluation of the Board of Directors and the CEO, and the result of this evaluation is shared with the Nomination Committee. The evaluation is conducted with the purpose to develop the Board of Directors' procedures and efficiency. The evaluation takes the form of a questionnaire that the Board members answer, after which the responses are compiled and presented to the Board of Directors and the Nomination Committee along with the results of the evaluations carried out in the two preceding years.

1) Resigned as an ordinary employee representative on February 7, 2023 (thereafter deputy employee representative). Has participated in the work of the Board since August 2023.
2) Elected on February 7, 2023.
3) Elected to the Remuneration Committee on April 27, 2023.
4) Resigned on April 27, 2023 in connection with the Annual General Meeting.
5) Resigned from the Audit Committee on April 27, 2023.
6) New election on April 27, 2023 in connection with the Annual General Meeting.
(7) Elected to the Audit Committee on April 27, 2023.

Remuneration Committee

The Board of Directors has appointed a Remuneration Committee consisting of Thomas Hecht (Chairman), Kristoffer Bissessar, Leonard Kruimer, Nanna Lüneborg and Bernd Seizinger. All members are independent in relation to the Company and the senior executives. The work is regulated in the instructions that comprise part of the rules of procedure for the Board of Directors and include to consider and to resolve on issues pertaining to remuneration and benefits to senior executives. The work includes preparation of other remuneration issues of greater importance, such as incentive programs. Added to this are assignments to monitor and evaluate ongoing and completed programs for variable remuneration to senior executives, monitor and evaluate implementation of the guidelines for remuneration to senior executives applicable for the year, as well as applicable remuneration structures and levels within the Company. The Remuneration Committee reports to the Board of Directors. The committee held three meetings in 2023.

Audit Committee

The Board of Directors has appointed an Audit Committee consisting of Kristoffer Bissessar (Chairman), Erik Esveld and Leonard Kruimer. The Audit Committee's members have the requisite accounting expertise. The Audit Committee, whose work is regulated in the instructions that serve as part of the rules of procedure for the Board of Directors, is tasked with preparing

issues on behalf of the Board of Directors regarding procurement of audit services and remuneration, monitoring the auditors' work and the Company's internal control systems, monitoring the current risk scenario, monitoring external audits and the Company's financial information, adopting the interim reports for quarters 1 and 3, preparing the interim report for quarters 2 and 4, as well as the Company's Annual Report, monitoring issues pertaining to financing, and preparing the adoption and revision of financial policy and other issues that the Board of Directors entrusts to the Committee to prepare. The Audit Committee reports to the Board of Directors. The committee held seven meetings in 2023.

R&D Committee
The Board of Directors has appointed a Research and Development Committee consisting of Bernd Seizinger (Chairman), Natalie Berner, Thomas Hecht, Nanna Lüneborg and Vincent Ossipow. The other Board members have also had a very high attendance at these meetings. The R&D Committee's primary tasks and responsibilities are to assist the Board of Directors with the interpretation of scientific data, assist management with the preparation of the communication of scientific data to different stakeholders, review, assess and give advice regarding scientific research that have been conducted by the Company, review materials provided by management or the Board of Directors, and give advice with respect to the overall research, clinical development, and regulatory strategy of the Company. The committee held three meetings in 2023.

AUDITORS
According to the Articles of Association, BioInvent shall appoint a registered auditing company for a term of two years. The auditor attends at least one Board meeting a year not attended by the CEO and other members of the Company's senior management. The AGM 2022 elected KPMG AB to serve as the Company's auditor for a period of two years. Linda Bengtsson, authorized public accountant, is the auditor in charge.

GROUP MANAGEMENT
According to its guidelines and instructions, the Board of Directors has delegated the daytoday business to the CEO. The CEO and, under his leadership, other members of the management group, are responsible for collective business operations and day-to-day business. The CEO regularly reports to the Board of Directors on the Company's business operations, financial performance, and other issues relevant to the Company. Once a year the Board of Directors evaluates the work of the CEO. No member of the senior management is present at this meeting. The CEO and the senior management are presented on pages 35-36.

REMUNERATION TO SENIOR EXECUTIVES
The Company's current guidelines for remuneration to senior executives was adopted by the AGM 2022. According to the guidelines, salaries, and other terms of employment for senior management are set at market rates. In addition to a fixed base salary, senior executives can also receive a variable salary, which will be limited and based mainly on technical and commercial milestones within proprietary drug projects. In addition to such fixed and variable compensation, the Company may grant retention bonuses which for a three-year period may amount to a maximum of 100 percent of the fixed salary for a year. Senior executives may also receive remuneration in the form of options or other share-related incentive programs, as decided by the Annual General Meeting of shareholders. The complete guidelines are presented in the Board of Directors Report on pages 44-45.

INTERNAL CONTROL
The Company's systems for internal control and risk management with respect to financial reporting for the 2023 financial year
According to the Swedish Companies Act and the Code the Board of Directors is responsible for internal control. This description has been prepared in accordance with the Annual Accounts Act, Chapter 6, Section 6, and describes the Company's systems and procedures for internal control in connection with financial reporting. Internal control and risk management regarding financial reporting is a process designed by the Board of Directors to provide the Board of Directors, senior management and others involved in the organization a reasonable assurance regarding the reliability of external financial reporting and the extent to which the financial statements are formulated in compliance with generally accepted accounting principles, applicable laws, and regulations as well as other requirements for listed companies.

Control Environment
The foundation of the internal control process consists of the overall control environment, including among other things: the Company's ethical values, organizational structure, and decision-making procedures, as well as the allocation of powers and responsibilities. The most essential components of the control environment at BioInvent are documented in its policies and other governing documents. BioInvent's rules of procedure describe the allocation of responsibilities between the Board of Directors and the CEO, as well as among the Board's committees. Other policies and governing documents include the Company's ethical guidelines, treasury policy and authorization instructions.

Control activities
Appropriate control activities are a prerequisite to manage essential risks associated with the internal control process. To ensure the efficacy of the internal control procedures, BioInvent has both computerized controls in IT systems to handle authorization and approval authority, as well as manual controls such as inventories and reconciliation procedures. Detailed financial analyses of the Company's performance, as well as follow-up of plans and forecasts, supplement the controls and provide an overall confirmation of the quality of financial reporting.

Information and communications
BioInvent's most essential policies and other governing documents are updated regularly and communicated to everyone involved through established information channels, in print and/or in electronic format.

Follow-up
BioInvent follows up and assesses its compliance with internal policies and other governing documents on a regular and annual basis. Suitability and functionality are also evaluated on a regular and annual basis. Inadequacies are reported and remedied in accordance with specific established procedures.

Internal audit
BioInvent has formulated governance and internal control systems with regular follow-up of compliance at various levels within the Company. The Board of Directors therefore does not consider a separate audit function to be necessary in the current situation. This is reconsidered annually by the Board of Directors.

The Board of Directors

Auditor's report on the corporate governance statement

To the general meeting of the shareholders in BioInvent International AB (publ), corporate identity number 556537-7263

ENGAGEMENT AND RESPONSIBILITY

It is the Board of directors who is responsible for the corporate governance statement for the year 2023 on pages 75-77 and that it has been prepared in accordance with the Annual Accounts Act.

THE SCOPE OF THE AUDIT

Our examination has been conducted in accordance with FAR's auditing recommendation RevR 16 The auditor's examination of the corporate governance statement. This means that our examination of the corporate governance statement is different and substantially less in scope than an audit conducted in accordance with International Standards on Auditing and generally accepted auditing standards in Sweden. We believe that the examination has provided us with sufficient basis for our opinions.

OPINIONS

A corporate governance statement has been prepared. Disclosures in accordance with chapter 6 section 6 the second paragraph points 2–6 the Annual Accounts Act and chapter 7 section 31 the second paragraph the same law are consistent with the annual accounts and the consolidated accounts and are in accordance with the Annual Accounts Act.

1) In August 2013 the Company carried out a rights issue. The issue price was SEK 2.10 and SEK 19,4 million was raised after deductions of issue costs.
2) In April 2014 the Company carried out a rights issue and a directed issue. The issue price was SEK 2.30 and SEK 57.3 million was raised after deductions of issue costs.
3) In May 2015 the Company carried out a rights issue and a directed issue. The issue price was SEK 1.55 and SEK 67.6 million was raised after deductions of issue costs.
4) In April 2016 the Company carried out a rights issue and a directed issue. The issue price was SEK 1.95 and SEK 209.5 million was raised after deductions of issue costs.
5) In December 2016 the Company carried out a directed issue. The issue price was SEK 2.56 and SEK 53.4 million was raised after deductions of issue costs.
6) In April 2018 the Company carried out a directed issue. The issue price was SEK 1.85 and SEK 80.3 million was raised after deductions of issue costs.
7) Warrants exercised in Board Share Program 2017.
8) In April 2019 the Company carried out a rights issue and directed issue. The issue price was SEK 1.60 and SEK 220.0 million was raised after deductions of issue costs.
9) Warrants exercised in Board Share Program 2018.
10) During the summer 2020 the Company carried out a directed issue and a repair rights issue. The issue price was SEK 1.38 and SEK 589.4 million was raised after deductions of issue costs.
11) In December 2020 the Company carried out a directed issue. The issue price was SEK 2.09 and SEK 61.1 million was raised after deductions of issue costs.
12) In March 2021 the Company carried out a directed issue. The issue price was SEK 50.36 and SEK 900.8 million was raised after deductions of issue costs.
13) In July 2022 the Company carried out a directed issue. The issue price was SEK 46.00 and SEK 279.8 million was raised after deduction of issue costs.
14) In January 2023 the Company carried out a directed issue. The issue price was SEK 37.40 and SEK 31.0 million was raised after deduction of issue costs.

Glossary

Agontist. A substance binding to and blocking a receptor, stimulating receptor activity.

Antibody. Proteins used by the body's immune system to detect and identify foreign substances.

Antibody mediated. Activation or effect mediated by an antibody.

BTK inhibitor. Bruton's Tyrosine Kinase inhibitor used to treat cancer.

Calquence®. Acalabrutinib. A BTK inhibitor.

CD20. A membrane protein found on white blood cells (B cells, excluding the more specilized plasma cells).

Checkpoint inhibitor. Antibody that has the ability to break tolerance in the immune system, for example to a tumor. It blocks immune suppressive signals through a specific receptor i. e CTLA-4, PD-1.

Clinical trials. Research studies of a candidate drug performed in healthy volunteers or patients.

CMC. Chemistry, Manufacturing and Controls.

Combination treatment. Treatment with two or three drugs in parallel.

CPIT. Chronic Primary Immune Thrombocytopenia.

CTLA-4. Cytotoxic T-Lymphocyte-Associated protein 4. An immune suppressive protein found on T cells, primarily on regulatory T cells.

Cutaneous. On, or in, the skin.

Cytokines. Proteins secreted by inflammatory cells, acting as intercellular signaling molecules for example as a response to something foreign.

Dose escalation. Stepwise increasing the dose of a drug.

Effector cell. In the immune system, the effector cells are the relatively short-lived activated cells that defend the body in an immune response.

Expansion cohort. When the number of patients in a dose group is increased.

Fc.R. Molecules found on the surface of some, but not all, B-lymphocytes, T-lymphocytes, and macrophages, which recognize and combine with the Fc (crystallizable) portion of immunoglobulin molecules.

Fc-gammaRIIB. The only Fc receptor that is immune suppressive.

FDA. Food and Drug Administration, an agency within the U.S. Department of Health and Human Services.

Follicular lymphoma (FL). The most common form of slow-growing non-Hodgkin's lymphoma.

Hematology. The study of blood and disorders in the blood and the blood-forming organs and lymphatic systems.

High affinity. High binding strength, for example an antibody.

Immune suppressive. Inhibiting or blocking the activity of the immune system, needed for example in autoimmune disorders or in connection with an organ transplantation.

Immuno-modulatory. Treatment of diseases with agents that affect the immune system.

IND approval. Investigational New Drug - an authorization from the Food and Drug Administration (FDA) to administer an investigational drug or biological product to humans.

Intratumoral administration. Injection directly in the tumor.

Keytruda®. Antibody to PD-1.

Ligand. Molecule that binds to other molecules, especially small molecules binding to larger molecules, such as an antigen binding to an antibody.

Lymphoma. A collective name for types of cancer that begin in the body's lymphatic system.

Mantle cell lymphoma (MCL). A type of cancer that may be slow growing (indolent) but can also be fast-growing (aggressive). Usually diagnosed on elderly people, most often men.

Marginal Zone Lymphoma (MZL). A slow growing type of B cell lymphoma.

Monoclonal antibody. An antibody originating from one single clone and therefore directed towards the same target.

Monotherapy. Treatment with one drug only.

MSD. A tradename of Merck & Co., Inc., Rahway, NJ., USA,

Myeloid cells. Bone marrow-derived blood cells.

NHL. non-Hodgkin's lymphoma.

Non-Hodgkin's lymphoma. Cancer in the lymphatic system.

Oncology. The study of cancer.

Oncolytic. The lysis (breakdown) of cancer cells.

PD-1. Programmed cell death protein 1. Many tumors are hiding and avoiding the immune system through a mechansim using the inhibiting protein PD-1.

Pembrolizumab. A drug that binds to the protein PD-1 to help immune cells kill cancer cells better and is used to treat many different types of cancer. The brand name is KEYTRUDA®.

Pharmacodynamics. The study of a drug's molecular, biochemical, and physiologic effects or actions. Describes the relationship between dose and pharmacologic effect and between dose and side effects.

Pharmacokinetics. Describes what the drug does to the body. Quantitative analysis of processes for drug absorption, distribution, metabolism, and excretion.

Phase 1/2/3 studies. Studies in healthy volunteers or patients to study the safety and efficacy of a potential drug or treatment method. Divided into the phases 1-3.

Phenotypic screening. Screening used in biological research and drug discovery to identify substances that alter the phenotype of a cell or an organism in a desired manner.

Regulatory T-cells. A specialized subpopulation of T cells that act to suppress immune response, thereby maintaining homeostasis and self-tolerance.

Rituximab. Anti-CD20 drug. Brand name Mabthera.

Solid tumor. Solid mass of cancer cells. 90% of all malignancies are solid tumors., the rest occurs in blood-forming organs.

Surrogate antibody. An antibody replacing one that binds to the same target.

TNFR2. Tumor Necrosis Factor Receptor 2. TNFR2 is upregulated on tumor associated, regulatory T cells (Tregs) and shown to be important for their growth and survival.

Tolerability. Refers to the degree of which a drug can be tolerated by an organism.

Treg. Regulatory T cell.

Annual General Meeting

The Annual General Meeting will be held on May 3, 2024, at 4 p.m., at Elite Hotel Ideon on Scheelevägen 27 in Lund, Sweden.

Shareholders who wish to attend the AGM must be recorded in the share register maintained by Euroclear Sweden AB ("Euroclear"), as of April 24, 2024, and notify the company of their intention to participate in the AGM no later than April 26, 2024, preferably before 4 p.m., at the address: BioInvent International AB, Ideongatan 1, SE-223 70 Lund, Sweden, att: Stefan Ericsson, by telephone +46 46 286 85 50 or by e-mail to stefan.ericsson@bioinvent.com.

The Board of Directors has, in accordance with the regulations in the articles of association, resolved that shareholders in BioInvent shall be able to exercise its voting rights at the AGM 2023 by postal voting. Shareholders who wish to exercise the possibility to vote by post shall, in addition to being included in the shareholder's register, notify the company of their intention to participate by submit their postal vote, which must be received by BioInvent no later than April 26, 2024, preferably before 4 p.m. The form shall be sent to BioInvent by e-mail to stefan.ericsson@bioinvent.com or by regular mail to BioInvent International AB, Ideongatan 1, SE-223 70 Lund, Sweden, att: Stefan Ericsson. The form for notification and postal voting is available on the company's website, www.bioinvent.com.

Shareholders whose shares are nominee-registered must temporarily re-register their shares in their own name in the shareholders' register maintained by Euroclear in order to participate in the AGM (so called "voting rights registration"). The shareholders' registers as of the record date on April 24, 2024, will include voting rights registrations made not later than April 26, 2024. Therefore, shareholders must, in accordance with the respective nominee's routines, in due time before said date request their nominee to carry out such voting rights registration.

If shareholders intend to be represented by proxy, a power of attorney and other authorization documents should be included with the notification to attend the meeting, and when exercise of the possibility to vote by post, a power of attorney and other authorization documents must be enclosed with the postal voting form. Proxy form is available upon request and on the company's website www.bioinvent.com.

UPCOMING FINANCIAL REPORTS

- BioInvent will present the following financial reports:
- Interim reports April 24, August 29, October 31, 2024

FORWARD LOOKING INFORMATION

This annual report contains statements about the future, consisting of subjective assumptions and forecasts for future scenarios. Predictions for the future only apply as of the date they are made and are, by their very nature, in the same way as research and development work in the biotech segment, associated with risk and uncertainty. With this in mind, the actual outcome may deviate significantly from the scenarios described in this annual report.
