Successful transformation for Annelunds Tak – wins new solar and roofing contract worth SEK 14 million

Soltech company Annelunds Tak has won a new order. The company will carry out roofing and install a solar energy solution covering 2,700 square meters on what will become a new production facility in Nässjö. The assignment is to be carried out for the developer Byggarvid and the order value amounts to approximately SEK 14 million.

Soltech acquires and develops companies in the solar, roof, facade, and electrical technology industries. Through the Group's transformation strategy, solar energy is then added to the companies' core competencies.

This strategy has been successful for the Herrljunga-based roofing company Annelunds Tak, which is now a solar roofing company that offers both roofing contracting and solar energy installations. This is not least reflected in the turnover, which has more than doubled since the company started its solar energy focus and with good profitability. CEO Mikael Markusson and his team have now won another combined roof and solar energy deal.

– Projects, such as this, that include both solar and roofing demonstrate our strength in providing both services for our customers. We want to thank Byggarvid for the trust and look forward to developing a sustainable property together, **says Mikael Markusson, CEO of Annelunds Tak.**

BREEAM-SE* certification and solar

Annelunds Tak has an established and long going collaboration with Byggarvid, which is a construction company that carries out construction contracts, project development and housing and that has a stated ambition to build properties that move the society in a sustainable direction. The production facility in Nässjö will have an area of 22,000 square meters and will be environmentally certified according to BREEAM-SE level Excellent, whereupon a solar energy solution was a given choice.

– It feels good that we will develop a property with high environmental performance. We have had great cooperation with Annelunds Tak in the past, so it feels safe that they will help us with both roofing and the installation of a large solar energy solution, **says Emanuel Elofsson at Byggarvid.**

** BREEAM (BRE Environmental Assessment Method) is an environmental certification system from Great Britain, developed and administered by the Building Research Establishment (BRE). BREEAM is one of the oldest environmental certification systems and the system has been used to certify over 500,000 buildings. BREEAM has existed in revised versions since 1990 and is the most widespread of the international systems in Europe. Sweden Green Building Council has adapted BREEAM to Swedish conditions since 2013.*
