

## Biomethane Station Data September 2024

**7 October 2024 - ReFuels N.V., one of Europe's leading suppliers of renewable biomethane (Bio-CNG) for the decarbonisation of heavy goods vehicles, today published Bio-CNG station data for September 2024.**

- 4,543 tonnes of Bio-CNG were dispensed from 14 public access refuelling stations in operation during September 2024, an increase of 17% from 3,885 tonnes in September 2023 (12 stations)
- The average daily dispensed volume was a record 151 tonnes in September 2024 compared to 129.5 tonnes dispensed per day in September 2023
- For the three months ending 30 September 2024, the total dispensed volume was 13,726 tonnes, an increase of 19% compared to the same period in 2023
- In September, a daily average of 1,774 vehicles refuelled at ReFuels' Bio-CNG stations, compared to 1,471 vehicles for the same period last year, corresponding to a 21% growth

"We are pleased to deliver a new dispensing record in September, exceeding an average of 150 tonnes per day for the first time. Towards the end of the month, truck deliveries accelerated, and we expect the strong momentum to continue in October, driving demand at our Bio-CNG stations. Customer trials for the new larger Scania 6x2 CNG truck are anticipated to start during November with long waiting lists. Additional trial vehicles are set to be deployed to meet this demand from a growing number of fleet owners looking to decarbonise their operations," said Philip Fjeld, CEO of ReFuels.

ReFuels had 162 unique customer fleets refuelling across the network in the three months ending 30 September 2024, compared to 143 for the comparable period in 2023.

Through the CNG Fuels brand, ReFuels operates 14 public access Bio-CNG stations on major trucking routes in the UK. ReFuels has two stations under construction, one in Doncaster in South Yorkshire, one of the UK's largest logistics hubs, and one in Livingston in Scotland, which will enable low-emission transport between Glasgow and Edinburgh. ReFuels has a target of 30-40 stations in operation and under construction by the end of 2026.

ReFuels provides monthly operational updates, which are normally released within ten working days after the end of the month.

### About ReFuels

ReFuels is decarbonising Europe's truck fleet by developing, owning, and operating green station infrastructure. We are rolling out a network of reliable and convenient stations offering renewable

biomethane fuels to heavy goods vehicles, with hydrogen and electricity to be added. By the end of 2026, the target is to have 30-40 stations across the UK, while the long-term ambition is to become Europe's leading integrated supplier of alternative fuels for commercial fleets.
