

M VEST WATER SECURES ADDITIONAL PURCHASE ORDERS FROM A GLOBAL LEADER IN AQUACULTURE

Following the contract award announced on April 15, 2025, MVW has secured additional sales related to enhancements of the water treatment solution delivered to a Norwegian salmon slaughterhouse.

The additional scope includes upgrades designed to strengthen system robustness, improve treatment efficiency, and optimize logistics for the supply of MVW's NORWAFLOC® products.

Since commissioning, the implementation of new treatment methodology with advanced sensor-based monitoring and automation has delivered strong operational results. It has also identified further improvement measures that will increase efficiency, boost operational resilience, and enhance the system's long-term performance.

"Our continued focus on developing and delivering Best Available Technology (BAT) is directly contributing to increased sales, rising inbound inquiries and strong tender activity within our Aquaculture segment. We expect this positive momentum to continue, driven by regulatory requirements and the industry's growing emphasis on sustainability," says Henrik M. Madsen, COO in MVW.
