

MobiMed ePR is getting ready to be re-initiated after previous cyber-attack

Ortivus has since the 20th of July been ready to initiate MobiMed ePR, electronic patients records, for the British customers that got affected during the recent cyber-attack. The company only awaits final approval by NHS authorities before the ambulance trusts can reconnect.

Ortivus can announce that the MobiMed ePR system that was hit by the previously reported cyber-attack is ready to be re-initiated for the affected customers as an interim live environment has been constructed using new equipment. Before the system can be brought into operation it has to be approved and verified by an independent actor to ensure that the system meets certain criteria indicated by NHS England and the Ambulance Trusts. This external analysis is ongoing and is expected to be finished at the beginning of next week.

Meanwhile, paramedics can use the MobiMed ePR application locally on their computers. However, they will not be able to import or export patient data before the approval has been received.

About Ortivus

Ortivus develops and commercialises MobiMed, e-health and medical technology solutions for a safer and more efficient healthcare. The company was founded in 1985 and is today a leading provider of mobile digital solutions for prehospital care, worldwide. Ortivus' innovations are based on in-depth expertise in cardiology as well as decades of development together with users and customers. The company's headquarters are located in Danderyd, Stockholm. The company has, since 1998, a wholly owned subsidiary based in the United Kingdom and since 2022, a wholly owned subsidiary based in Denmark.

MobiMed is a modular platform that connects and enable real-time information sharing throughout the prehospital care chain. It is currently used by over 12,000 paramedics in over 2,700 emergency vehicles. The platform, MobiMed, consists of several product modules that are completely integrated but can also be used stand-alone. MobiMed comprises four main solutions: MobiMed Monitor, that measures, monitors and shares patients' vital parameters and ECG in real-time, MobiMed ePR, - an electronic patient record for decision support, collection of patient data and clinical documentation, MobiMed enRoute, - a tool for navigation and case management, and MobiMed Life - a range of stand-alone defibrillators.

MobiMed saves vital seconds and enable healthcare professionals make the right decisions in critical situations. MobiMed also contributes to improved quality of care and saved resources.

Ortivus Class A and Class B shares are listed on the NASDAQ Stockholm Small Cap list.
