

### BerGenBio Fourth Quarter 2024 Results:

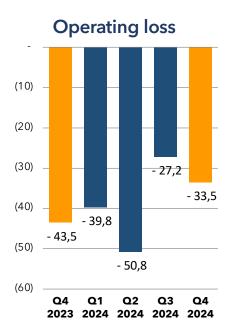

"Yesterday we announced the company's decision to close BGBC016, a Ph1b/2a study in 1L NSCLC patients with a mutation in the STK11 gene. It is, of course, disappointing unexpected that we are discontinuing the study. I would like to extend my gratitude to the patients and investigators who participated in our study for this particularly difficult-to-treat patient group, as well as to our team members who have worked tirelessly on this effort. Unfortunately, we do not believe these preliminary results are strong enough for the company to obtain additional funding within the current cash runway to complete the study as originally designed. The company is now entering a new phase in which strategic alternatives will be explored, which may include a potential sale, merger, or other strategic transaction."

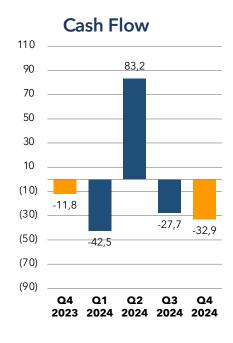

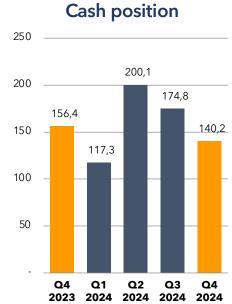

Olav Hellebø Chief Executive Officer

## Clinical Development

#### **Bemcentinib**

BerGenBio's lead compound, bemcentinib, is a potentially first-in-class, oral, highly selective inhibitor of the receptor tyrosine kinase AXL, which is expressed and activated in response to oxidative stress, inflammation, hypoxia and drug treatment, resulting in several deleterious effects in cancer and severe respiratory infections.

#### Bemcentinib + Standard of Care in 1L STK11m NSCLC (BGBC016)

In 2024, the company announced the completion of enrollment in the Ph1b portion of the study which demonstrated acceptable safety in 1L NSCLC patients regardless of STK11 mutational status, as evaluated by an independent Data Safety Monitoring Board (DSMB). Early encouraging data were seen in three STK11m patients, including one patient who experienced a complete response and who remains in response and on treatment after nearly two years. The company, in agreement with the independent DSMB, determined that these initial results warranted the continuation of the study into the Ph2a portion.

In March 2024, the company initiated the Ph2a portion of the study designed to recruit 40 evaluable 1L STK11m NSCLC patients. The primary endpoint for the Ph2a was overall response rate (ORR). To determine the feasibility of obtaining near-term funding, the company performed a preliminary analysis of the responses in the 10 efficacy evaluable STK11m patients. While there was 1 response in the Ph1b we did not observe additional responses in the Ph2a patients. Consequently, the company has decided to discontinue the BGBC016 study.

The Board of Directors has now initiated an exploration of strategic alternatives. As part of this process, the board will consider a range of options for the company including, among other things, a potential sale, merger, or other strategic transaction. There can be no assurance that this exploration process will result in any transaction.

### Bemcentinib + pacritinib in advanced adeno. lung cancer (BGBIL025)

Post-quarter in January 2025, the Company announced that the first patient had been enrolled into the BGBIL025 study led by the University of Texas at San Antonio under the direction of Dr. Josephina Taverna, M.D., Assistant Professor. The study is being undertaken under a collaborative study agreement between UTSA, Sobi® and BGB and is fully funded by a NIH grant and studies the combination of BerGenBio's bemcentinib in combination with Sobi's pacritinib

## Note 4 Employee share option program

The Group has a Long-Term Incentive Program for employees, an option scheme program. Each option gives the right to acquire one share in BerGenBio at exercise.

The Group has a share option program to ensure focus and align the Group's long-term performance with shareholder values and interest. Most of the employees in the Group take part in the option program. The program also serves to attract and retain senior management. The exercise price for options granted is set at the market price of the shares at the time of grant of the options. In general, options expire eight years after the date of grant.

Primarily the options vest annually in equal tranches over a three-year period following the date of grant.

In the annual general meeting on the 23 of May 2024 it was resolved a reverse share split of the shares in the ratio 100:1. The overview above takes into account the reverse share split for 2024.

The options are valued using the Black-Scholes model.

The risk free interest rates are based on rates from Norges Bank and Oslo Børs on the Grant Date (bonds and certificates) equal to the expected term of the option being valued. Where there is no exact match between the term of the interest rates and the term of the options, interpolation is used to estimate a comparable term.

The vesting period is the period during which the conditions to obtain the right to exercise must be satisfied. The Group has estimated an expected vesting date and this date is used as basis for the expected lifetime. The Group expects the options to be exercised earlier than the expiry date. For Options granted earlier than 2014, the mean of the expected vesting date and expiry date has been used to calculate expected lifetime due to the lack of exercise pattern history for the Group and experience from other companies in combination with the relatively long lifetime of these options (up to 8 years).

For valuation purposes 50% expected future volatility has been applied.

For the twelve months period ending 31 December 2024 the value of the share options expensed through the profit or loss amounts to NOK 5.7 million (for the same period in 2023: NOK 3.1 million). In addition, a change in provision for social security contributions on share options of NOK -0.04 million (for the same period in 2023: NOK 0.04 million). The provision for social security contribution is calculated on the difference between the share price and exercise price on exercisable option as at the end of the period.

Share options issued have a potential dilutive effect on earnings per share. No dilutive effect has been recognized as potential ordinary shares only shall be treated as dilutive if their conversion to ordinary shares would decrease earnings per share or increase loss per share from continuing operations. As the Group is currently loss-making, an increase in the average number of shares would have anti-dilutive effects.
