

Press Release

of Pyrum Innovations AG

Pyrum improves significantly and receives silver medal in EcoVadis rating

- Overall rating increased to 70 points
- Pyrum is among the best 8% of the industry
- Introduction of comprehensive new guidelines

Dillingen / Saar, 2 July 2025 - Pyrum Innovations AG ("Pyrum", the "Company", ISIN: DE000A2G8ZX8) has once again been awarded the silver medal in the renowned EcoVadis rating. Compared to the last rating, the company was able to increase its score by 9 points to 70 points. This puts Pyrum among the best 8% of the companies assessed in the "recovery of recyclable materials" sector.

The EcoVadis rating is a comprehensive assessment of the sustainability performance of companies in the areas of environment, labour and human rights, ethics and sustainable procurement. In the area of "sustainable procurement" in particular, Pyrum was able to improve significantly compared to the last assessment. This was mainly due to the gradual expansion of the existing quality and environmental management system to include sustainability issues and the introduction of new, Group-wide compliance guidelines.

Pascal Klein, CEO of Pyrum Innovations AG: "We are delighted to have once again been awarded the silver medal by EcoVadis and to have improved our rating. It confirms that we are on the right track. We are particularly proud that our new environmental and compliance guidelines are already having a positive impact. It also shows that our continuous efforts are not only bearing fruit within the company, but are also being praised and recognised by our partners."

As part of its sustainable reporting, Pyrum will place even greater emphasis on expanding its CO₂ accounting and raising employee awareness of compliance as part of its responsible corporate governance. The aim is to further develop existing processes and specifically add ESG (environmental, social, governance) topics.

The recertification is valid for a period of one year until June 2026.

About Pyrum Innovations AG

Pyrum Innovations AG has revolutionised the recycling market for end-of-life tyres. Since 2008, the company has been developing an innovative thermolysis technology that enables end-of-life tyres and plastics to be recycled with virtually no emissions. The process can recover high-quality products such as thermolysis oil and rCB (recovered Carbon Black), which are used by renowned partners such as BASF, Continental and Schwalbe to manufacture new products. In this way, the company closes the material cycle and pursues a sustainable business model in line with climate targets. Since 2020, the first plant at the company's headquarters in Dillingen/Saar has been in continuous operation, and two further plants have been added as part of the site expansion in 2024. Thanks to respected certificates such as REACH and ISCC Plus, the products are high-quality, sustainable and renewable. Pyrum has already received multiple awards for its innovative solutions and continues to research potential waste streams.
