

Cambi signs lease agreement for a THP unit with Thames Water in Oxford

Asker, Norway, 19 January 2026

Cambi has signed a lease for a compact thermal hydrolysis process (THP) unit to provide additional treatment capacity at the Oxford sewage treatment works.

The agreement has an initial one-year term with two one-year extension options. Thames Water will operate the system. Annual maintenance is included in each year of the lease.

“Our collaboration with Thames Water spans three decades and has played an important role in advancing sustainable solids treatment in the UK. This agreement underlines Cambi’s flexible delivery model, using leasing solutions tailored to meet immediate operational needs while permanent capacity is being evaluated”, said Peder Lillebø, Managing Director of Cambi Solutions.

The lease of the Cambi THP will increase local treatment capacity by more than 50%, enabling Thames Water to process all solids locally instead of trucking considerable volumes for treatment elsewhere.

Thames Water is the UK’s largest water and wastewater services provider, serving around 16 million people in London and surroundings. The utility operates Cambi THP systems at seven locations.

Commissioning is planned in 2026, following installation and commissioning supervision that is included in the first-year lease fee.

About Cambi

Cambi is a global supplier of biogas technology and solutions for wastewater treatment plants and anaerobic digestion facilities. Since 1992, Cambi has retained market leadership through continuous innovation and a robust portfolio of proven and patented technologies. With strong project delivery and customer support capabilities, the company has delivered many well-performing installations in 28 countries on six continents.

Cambi's thermal hydrolysis process increases renewable energy output, reduces operational costs, protects public health, and minimises greenhouse gas emissions. It is a future-proof solution suitable for all biosolids outlets, including land application and thermal processes such as drying, pyrolysis, and incineration. Thermal hydrolysis is compatible with all sludge and waste treatment regulations and can be integrated smoothly at new and existing anaerobic digestion sites.

Cambi is listed on Euronext Growth Oslo, a multilateral trading facility in Euronext, Europe's largest stock exchange platform. Find out more at cambi.com.
