About Cambi:

Cambi is a global provider of technologies and services for water and wastewater treatment and organic materials management. Since 1992, the company has served utilities, municipalities, and industrial customers.

The thermal hydrolysis process (THP) is Cambi's core technology. More than 100 Cambi THP systems are in operation across more than 25 countries on six continents. The process is used with anaerobic digestion to enhance the treatment of organic feedstocks, increase biogas production, improve dewatering, and reduce final biosolids volumes. It can be integrated into new and existing facilities and supports downstream routes ranging from land application to thermal processing.

The wider portfolio includes technologies for nutrient recovery and digestion, lifecycle services, biosolids logistics and land application, composting, and soil production. Cambi ASA is listed on Euronext Growth Oslo under the ticker CAMBI. Find out more at cambi.com.
