IKEA IT Chooses Nocom Solution for Host Computer Access

Nocom AB (publ) has signed an agreement with IKEA IT AB pertaining to the delivery of products and services for host computer access. The agreement also encompasses maintenance and support, and is an expansion of collaboration that has existed between the companies since 1996. The products provided are WRQ's Reflection for the Web. The agreement is valued at approximately SEK 2.7 million.

With Reflection for the Web, host computer access is made possible via Web browsers. The advantage of this is reduced administrative and maintenance costs in that all users can be administered from a Web server.

"Host computer access is an important part of Nocom's experience and expertise within integration - the linking together of a company's various IT systems into a single unit. We help our customers to use new technology and to overcome difficulties during technology shifts by continually developing new integration solutions," says Stefan Skarin, CEO, Nocom.
