Nocom signs new contracts for integration

Nocom has signed two contracts in the field of integration. The contracts, which represent an expansion of collaboration with existing customers, encompass both licenses and support services. The combined order value amounts to SEK 3.8 million.

The licenses pertain to software for host computer access, meaning integration between personal computers and host computers. Services at Nocom Support embrace everything from updating and new versions to consultation, quality assurance and expert problem solving. Over the years, Nocom has gained considerable expertise and experience in host computer access.

"We see that demand in the field of integration is stable, despite the IT market generally being characterized by weak demand and low investments," says Tobias Svensson, Business Unit Manager, Integration, Nocom.

"Companies are now choosing to invest in their existing systems, rather than investing in entirely new IT environments. This benefits Nocom, which is leading in host computer access in Sweden. We offer solutions that provide immediate cost savings and that are now in demand in the marketplace."
