

NOTE expands to the west coast

The fastest economical growing electronic manufacturer in Sweden, NOTE, now also grow geographically and start activities in Gothenburg spring 2002. OEM-companies on the west coast has been lacking a larger EMS-supplier for a long time. Now the first global electronic manufacturer comes in place. This means that companies in the Gothenburg region now will have direct access to expertise within Electronic Manufacturing Service.

- In Gothenburg there are many companies that request high quality electronic production. By starting up in that area we get closer to our customers which enables us to offer our customers a shorter way from idea to production in close co-operation with the customer, says Sten Dybeck, NOTE CEO.

NOTE have had personal on location in Gothenburg for some time to prepare the start. The effort is a part of the company's offensive expansion right now . NOTE is on the list over Swedish growth companies for the fifth year in a row.

- We have already received a positive response from our customers in the Gothenburg region. I think the reason to the success of NOTE is that we take care of our customers. We like to grow with them and be able to provide local production if desired. I line with this policy the Gothenburg effort is exactly right, says Sten Dybeck.
