Nocom Software starts co-operation with Itera ASA

Nocom Software AB, a distribution company in the Nocom group, is starting co-operation with the Swedish subsidiaries of the Norwegian company, Itera ASA, concerning mobile Internet and the analysis of web and firewall traffic. The first stage of the co-operation comprises the four Itera companies; Diator, IT-Partner, Lan International and Agens.

With products from Nocom Software, Itera ASA will create a centre of competence in Stockholm, working with application development for mobile units. Initially, the group will consist of ten people in Stockholm and will later be expanded to include Itera consultants in Frankfurt, Berlin, Oslo and Copenhagen. From the start, Itera ASA will be able to offer ASP solutions in Oslo and Stockholm for customers who do not want to host systems themselves.

"In working with Itera ASA, we gain a strong partner offering customers support in management consulting, application development and operation. Itera's knowledge and competence, combined with our products enable us to offer the market exciting solutions focused on intrabusiness, in other words, solutions for internal business operations", says Peter Lämber, Vice President of Nocom Software AB.

"Nocom Software offers advanced software and the support that we need to start the competence centre. We will, above all, work with the Nokia WAP Server and analysis tools from WebTrends, represented by Nocom Software, to create adapted solutions for our customers," says Ulf Magnusson, Managing Director of IT-Partner and Diator.
