

Agreement signed with the University of Pennsylvania Hospital for Clinical Study on Prostate Cancer Treatment

SpectraCure has signed an agreement with the University of Pennsylvania Hospital ("Penn Hospital") in Philadelphia, USA. The agreement concerns clinical studies for treatment of patients with recurrent prostate cancer with the company's photodynamic tumor therapy technique (PDT). Penn Hospital will be involved in the Phase 1 study that is also conducted at the Princess Margaret Cancer Center in Toronto, Canada. Thereafter, a continuation of a phase 2 study is planned.

As previously announced, University College London Hospital in London, UK, will also participate in the Phase 1 study. This means that recruitment of patients will run parallel in Philadelphia, London and Toronto, the results will then be compiled.

- It is very pleasing that we now have an agreement with Penn in place, comments CEO Masoud Khayyami. Secondly, it is important to be able to keep a fast pace in the clinical program in the future, and it is strategically important for commercialization and approval from the authorities to have the study in the United States. Penn Hospital is a highly reputed hospital.
