

XMReality Remote Guidance being tried out by Norwegian Emergency Medical Services

In collaboration with Norwegian Jodapro, XMReality Remote Guidance is being tried out by the Norwegian Emergency Medical Services. The application is tested for deployment when paramedics arrive at the scene of an incident. Smart glasses allow the paramedics to connect with the appropriate specialist doctor and hospital for faster and better care.

The joint solution which is being evaluated means that XMReality Remote Guidance will be part of Jodapro's telemedicine offering for Emergency Medical Services in Norway. Together this delivers a highly competitive solution that combines software and smart glasses with the aim of giving paramedics the best possible remote access to expertise.

"Health Care is another new and very interesting market for our product. Although this initial project is a pilot and as such has only a small financial effect for us at XMReality since it involves relatively few software licenses, this lays the foundation for a successful long-term collaboration with Jodapro," says Jörgen Rimmelg, CEO at XMReality.

Jodapro is a subsidiary to Jodacare that works with elderly care in Norway and also has plans to utilize XMReality Remote Guidance to avoid visits to the hospital for the elderly unless absolutely necessary.

"Jodapro has close collaboration with paramedics and doctors at the hospitals to give patients faster and more effective care. At the same time, Jodapro and Jodacare works together to make sure that people in elderly care homes won't have to go to the hospital in an ambulance when it's possible to treat them in the safe environment of their home. By using HMT-1 (smart glasses) at elderly care homes, connected to a doctor at a hospital, the elderly can live a better and more undisturbed life without compromising on the quality of their care" says Kristil Håland, CEO at Jodapro.

About XMReality Remote Guidance™

XMReality Remote Guidance is an AR-enabled knowledge sharing tool that lets you communicate with gestures, speech, chat and pointers with someone at a completely different place. It includes:

- A unique hands-overlay technology that lets you guide someone else's hands—as if you were there.
- A web portal to manage teams and users, and to measure usage
- Integration through client-side API's (Application Programming Interfaces)

About XMReality

XMReality AB (publ) develops and sells solutions that revolutionizes knowledge sharing through augmented reality (AR). The company is a market leader in remote guidance, which uses AR to guide onsite staff and enable them to resolve or prevent problems. XMReality's customers are mainly global industrial companies, including Bosch Rexroth, ABB, Siemens Industrial Turbomachinery, Electrolux and Bombardier. XMReality is headquartered in Linköping, Sweden, and is listed on Nasdaq First North (ticker: XMR). Further information is available under www.xmreality.com
