XMReality releases the market's first full web guide station that supports real time overlay of moving physical objects

Today XMReality released several new product features where the most notable new functionality is a fully web-based solution, i.e. runs in the browser without the need to download any software. The 'Web Guide Station' includes support for one of XMReality's key guiding features; Hands-Overlay, and is the first fully web-based solution with this function in the market.

In 2018 XMReality was first in the market to introduce "web links", something which enabled a XMReality user to connect with whoever they wanted without that person needing to download the software and getting a user account. Instead, they received a link to their phone through a text message, email or other communication app and could join a Remote Guidance call through their device's web browser. This possibility opened up completely new use scenarios for the customers and has been a key selling point of the software ever since. Today, XMReality takes the next step in making the solution easy and accessible by launching a fully web supported version. This means that a XMReality user can access the solution by logging in through a web browser, without the need to download and install the application software to their computer. Once logged in they have access to several guiding features, including Hands-Overlay.

Apart from the new 'Web Guide Station' the product release includes additional functions to work with user statistics, rating of call quality and some enhancements when using XMReality Remote Guidance with smart glasses.

About XMReality Remote Guidance™
XMReality Remote Guidance is an AR-enabled knowledge sharing tool that lets you communicate with gestures, speech, chat and pointers with someone at a completely different place. It includes:

- A unique hands-overlay technology that lets you guide someone else's hands—as if you were there.
- A web portal to manage teams and users, and to measure usage
- Integration through client-side API's (Application Programming Interfaces)

About XMReality
XMReality develops and sells solutions that revolutionizes knowledge sharing through Augmented Reality (AR). The company is a market leader in Remote Guidance, which uses AR to guide onsite staff to enable quick dispositions, resolutions and/or problem prevention. The product is currently used in more than 60 countries. ABB, Nestlé, Electrolux, AB Inbev, Sidel, Hexagon, Bühler and Minibea Intec are some of the more than 90 Enterprise customers. With operations in Sweden and US, XMReality is listed on Nasdaq First North (ticker: XMR). Further information is available under www.xmreality.com
