

# Tangiamo to Unveil AI-Powered Dice Recognition Tech at ICE London 2024

**Gothenburg, Sweden – Premiering at ICE London 2024, Tangiamo is proud to announce the launch of its AI-powered automatic dice recognition (ADR) system. The state-of-the-art system represents a significant leap in dice recognition technology, combining advanced machine learning with innovative artificial intelligence to offer unprecedented accuracy and efficiency in live dice games.**

“We've developed a system that goes beyond mere pip reading; it observes dice rolls with a precision that mimics human perception, yet with a level of intelligence, speed, and accuracy far beyond human capability. This unique system stands alone in its class, marking a groundbreaking advancement that's set to transform how live dice games are played and monitored.” said Chris Steele, CEO with Tangiamo.

Crafted with the latest in image recognition, machine learning, and AI technologies, Tangiamo's new ADR system boasts an impressive accuracy rate of over 99.9%. The first customers, live-online casinos, will experience the unparalleled benefits of this system for their live table games. It also seamlessly integrates with other electronic table games (ETGs), including Tangiamo's own MultiPLAY and IGNITE platforms, to offer comprehensive dice gaming solutions for land based operations.

The new ADR system will be available for demonstration with Abbiati Casino Equipment at ICE London, 6-8 February 2024 at ExCeL London, Stand: S8-230.
