## **TERRANET PARTICIPATES IN NEUROMORPHIC SWEDEN**

**Neuromorphic technology is in focus as Terranet takes part in a national workshop in Lund on January 20–21, 2026. The company has been part of Neuromorphic Sweden since 2025.**

Terranet's engagement in Neuromorphic Sweden is based on the company's work with neuromorphic sensor technology, which is used in Terranet's sensor solution BlincVision. The sensor technology can be compared to the human eye, where changes in the environment are detected rather than continuously capturing full image data. This neuromorphic technology is therefore of strategic interest to Terranet, as the combination of such sensor technology and computing creates the conditions for faster information processing.

The workshop in Lund is part of NEUTEC, a Vinnova-funded initiative linked to Neuromorphic Sweden. The purpose is to explore future use cases and forms of collaboration within neuromorphic technology between industry, startups, academia, and research institutes.

“Neuromorphic Sweden brings together key players from industry, research, and academia. For Terranet, participation is a way to be an active part of an area that is developing rapidly,” says Jonas Renander, CCO at Terranet.
