

Global Technologies makes acquisition in the United Kingdom

Mycronic's Global Technologies division has acquired RoBAT, a company headquartered in the United Kingdom, which has developed a technology for fast and reliable tests of signal quality on PCBs.

Global Technologies is already active in providing electrical test equipment for bare board PCBs through the PCB Test business line. RoBAT offers specialized test equipment for high frequency signal quality tests of bare board PCBs. The company was founded in 2001, with currently 27 employees, and offices in the United Kingdom, United States and China. Net sales in 2024 amounted to GBP 3 million

"Computational power and communication will continue to evolve rapidly. The resulting high-speed applications require PCBs with good high frequency signal quality", says Magnus Marthinsson, Sr VP Global Technologies at Mycronic.

"RoBAT's offering is very exciting and particularly relevant for AI server applications", says Jochen Kleinertz, Head of the PCB Test business line at Mycronic.

RoBAT will form part of the PCB Test business line within the Global Technologies division.
