## FPC launches AllKey Software Platform to accelerate growth in secure embedded and IoT Markets

**Gothenburg, Sweden – March 9, 2026** – Fingerprint Cards AB (FPC) today announces the launch of the FPC AllKey Software Platform, a fully integrated biometric platform that enables customers to develop and run their own applications directly on AllKey devices, secured by FPC’s industry-leading fingerprint authentication. The launch marks an important strategic step for FPC as the company continues its expansion beyond standalone biometric components into higher-value platform solutions, targeting fast-growing markets such as enterprise security, access control, and IoT.

Demand for secure and user-friendly authentication continues to grow as organizations and consumers seek stronger protection against cyber threats. By addressing applications in enterprise IT, industrial systems, and connected devices, the AllKey Software Platform positions FPC to participate in structural growth trends beyond the traditional smartphone market. Furthermore, AllKey Software Platform represents a move further up the value chain; instead of supplying only a biometric sensor, FPC now offers a programmable, secure platform that becomes a central part of the customer’s product design. This deeper integration increases the potential revenue per design win, strengthens customer relationships, and creates opportunities for longer product lifecycles and repeat business.

The AllKey Software Platform, entirely developed in-house, combines FPC’s proven fingerprint technology with a secure microcontroller environment that allows customers to develop and run their own applications directly on the device. This means manufacturers can develop complete, secure products using a single integrated solution, reducing complexity, cost, and time to market. Typical applications include secure PC login keys, USB authenticators, access control devices, industrial panels, and connected IoT products.

The platform is built on secure embedded technology, including TrustZone® protection and a secure boot chain, ensuring that customers can meet enterprise-grade security requirements. At the same time, it is supported by an accessible software development kit that enables faster product development and customization, making it attractive to both established OEMs and emerging innovators.

**Adam Philpott, CEO of FPC, comments:**

“Launching the AllKey Software Platform is a natural next step in FPC’s strategy to broaden our offering and capture more value in the authentication chain. Customers are increasingly looking for complete, secure solutions rather than individual components. By combining our industry-leading fingerprint performance with programmable secure hardware, we make it easier for them to bring differentiated products to market. For FPC, this expands our addressable market and supports sustainable long-term growth.”

Press Release  
9 March 2026

---

Demonstrator units and evaluation kits are available immediately. With this launch, FPC reinforces its role as a global leader in biometric security while advancing its transformation into a broader provider of secure authentication platforms.

**About FPC**

Fingerprint Cards AB (FPC) is a global biometrics leader, offering intelligent edge to cloud biometrics. We envision a secure, seamless world where you are the key to everything. Our solutions – trusted by enterprises, fintechs, and OEMs – power hundreds of millions of products, enabling billions of secure, convenient authentications daily across devices, cards, and digital platforms. From consumer electronics to cybersecurity and enterprise, our cloud-based identity management platforms support multiple biometric modalities, including fingerprints, iris, facial, and more. With improved security and user experience, we are driving the world to passwordless. Discover more at our [website](#) and follow us on [LinkedIn](#) and [X](#) for the latest updates. FPC is listed on Nasdaq Stockholm (FING B).
