## Soltech installs 4 000 m<sup>2</sup> of solar energy for Emilshus in Värnamo

Swede Energy, a Soltech subsidiary, is building a large solar energy solution for the real estate company Emilshus and the tenant Bufab. The facility will cover most of the roof and will be in full operation during October 2021.

Swede Energy has a vast experience of installing large and complex solar energy solutions and has now received an order from the real estatator Emilshus of a 4,000 m<sup>2</sup> of solar panels at the property in Värnamo, where the global trading company Bufab is the tenant.

– We are very proud to have received this assignment from Emilshus. It is a leading developer that clearly prioritize sustainability. The planned solar energy facility proves their green ambitions, and we are very much looking forward to ensuring that the tenant Bufab will be able to enjoy the rays of the sun in their future business, **says Rickard Lantz, Sales Manager at Swede Energy.**

### Locally produced solar energy in Värnamo

The property is located in Värnamo, where Emilshus manages several properties. As part of the company's sustainability strategy, the tenant Bufab now will be supplied with green energy directly from the sun. Something that benefits both Emilshus and Bufab.

– Sustainability investments of this kind are completely right for us. Energy efficiency in our properties is important and it's obvious that solar energy will help us in our sustainability efforts. We are grateful for the smooth collaboration with Swede Energy and look forward to our new solar energy solution, **says Lisa Johansson, Sustainability Manager at Emilshus.**
