TERRANET PARTICIPATES IN A NEW RESEARCH PROJECT TO FURTHER ADVANCE TRAFFIC SAFETY.

AstaZero*, in collaboration with several partners, including Terranet AB and Trafikverket, is launching a new research project running from 2026 to 2027. The project is funded by Vinnova, Sweden's innovation agency, and focuses on developing new methods to improve traffic safety.

Terranet has since 2024 participated in both VERDAS and VERDAS 2. The first project focused on pedestrian scenarios and has contributed to the basis for Euro NCAP's** upcoming robustness tests to be introduced in 2026. VERDAS 2 built on this work and shifted the focus to cyclists, a particularly vulnerable group in traffic. Together, the projects have provided important knowledge about how driver assistance systems should be tested in real-world situations, knowledge that now continues into the next step through VERDAS 3.

VERDAS 3 takes a broader approach and covers more types of accident scenarios, from car-to-car situations to events involving vulnerable road users such as pedestrians, cyclists and riders of light two-wheeled vehicles. The project will develop new test methods, both in real environments and in simulated tests, to better reflect real traffic situations. The work will support Euro NCAP's updated protocols for 2029 and contribute to the development of more reliable driver assistance systems.

"VERDAS 3 brings together strong partners with a shared goal: to make future driver assistance systems more reliable. For us, it is important to be part of this work," says Lars Lindell, CEO of Terranet.

* AstaZero, owned by RISE (Research Institutes of Sweden), is a test facility for traffic safety and automated vehicles. The facility offers research and development opportunities for safety systems and autonomous vehicle solutions.

** Euro NCAP (European New Car Assessment Programme) is a collaboration between European countries, car manufacturers, and voluntary organizations. They have created a five-star safety rating system to help consumers and businesses choose safer vehicles.

About Terranet AB (publ)

Terranet's mission is to save lives in urban traffic. We develop groundbreaking technology solutions for advanced driver assistance systems (ADAS) and autonomous vehicles, with a focus on protecting vulnerable road users from injury. Using a unique and patented sensor technology, Terranet's system BlincVision scans the road with laser precision, detecting objects up to ten times faster than any other ADAS solution on the market today.

Terranet is headquartered in Lund, Sweden, with additional operations in Gothenburg and Stuttgart – at the heart of the European automotive industry. Since 2017, the company has been listed on Nasdaq First North Premier Growth Market (Nasdaq: TERRNT-B). Visit us at www.terranet.se

Certified Adviser to Terranet is Mangold Fondkommission AB, 08-503 015 50, ca@mangold.se.
