

BeammWave launches Next Generation of its Advanced Development Platform (ADP1)

With the first generation well received, BeammWave is now launching the next generation of its Advanced Development Platform (ADP1).

Since its launch in late 2023, ADP1 has proven to be an extremely powerful tool for both customers as well as for BeammWave's internal roadmap. The new release enables both existing and new customers to explore more advanced use cases, benefit from increased automation, enjoy higher flexibility, and get even better user experience.

This release reflects customer needs and enables advanced testing of use cases that cannot be performed at all using analog beamforming.

The new release does not require any new hardware but allows for hardware extensions that further extend the platform's capabilities.

"This release allows our customers to move significantly closer to their product ambitions", says Per-Olof Brandt, CTO at BeammWave.
