## Soltech companies Takab i Falun and E-Mobility in joint project – order value of SEK 11 million

Two Soltech companies, Takab i Falun and Borlänge-based E-Mobility, will jointly carry out several assignments for tenant-owner associations in Rättvik and Avesta. The assignments consist of roof renovation, sheet metal work, IMD solutions\* and about 1,500 sqm of solar energy distributed over six buildings. The projects start in August and the order value amounts to approximately SEK 11 million.

Soltech has a growth strategy with acquisitions in the solar, roof, façade and electrical engineering industries. Something that builds a group with cross-industry competencies. The goal is then for the companies create synergies such as business advantages for the companies but also predictability for the customers. Something that has now happened when Soltech's two companies based in Dalarna collaborate in new joint deals in Rättvik and Avesta.

The Soltech companies that will carry out the work are Takab i Falun and Borlänge-based E-Mobility. Firstly, Takab will carry out roof renovation on all buildings, including sheet metal work. When the new roofs are in place, E-Mobility will then install approximately 1,500 sqm of solar panels distributed over the six buildings. For the tenant-owner association in Rättvik, E-Mobility will also install smart IMD solutions connected to the solar panels that reduce the total electricity cost for all residents.

– These deals are clear examples of the benefits that are created when our companies work together. Takab i Falun, which has deep roofing expertise but now also solar energy expertise, starts the work, after which Martin Götesson and the team at E-Mobility install solar panels and associated IMD solutions. The customer gets talented entrepreneurs who also have the ambition to collaborate throughout the project, which makes everyone a winner, says **Stefan Ölander, CEO of Soltech Energy**.

*\*IMD solutions linked to solar energy solutions create smarter subscription solutions and lower the total electricity cost for all tenant-owners*
