

PRESS RELEASE

STOCKHOLM, 24 SEPTEMBER 2026 09:00 CEST

RaySearch to showcase latest innovations in automation, speed, and advanced analytics at ASTRO 2026

RaySearch Laboratories AB (publ) will participate in the annual ASTRO Meeting in Boston, Massachusetts, September 27–29. At booth #724, visitors can explore RaySearch's latest software solutions, book product demonstrations, and learn how RayStation®*, RayCare®*, and RayIntelligence® are empowering clinics to automate planning, streamline workflows, and turn clinical data into actionable insights.

Automated workflows are shaping the future of radiation therapy. RaySearch offers state-of-the-art automation tools designed to streamline the entire treatment journey, with unrivaled speed. Without compromising on quality, this empowers clinics to focus on what matters most: the patient.

RayStation harmonizes treatment planning through a unified automation environment, including scripting, protocols, templates, fast computation, and advanced tools for segmentation and treatment planning. The unrivaled calculation speed supports efficient replanning workflows and helps teams explore more options in less time.

RayCare, the next-generation oncology information system, brings automation beyond the treatment plan, providing consistency and efficiency through active workflows, task automation, and seamless coordination across the clinical process.

RayIntelligence is the cloud-based analytics system. With RayIntelligence v2026, clinics gain new ways to monitor AI performance and benchmark plan quality, helping teams understand how automation performs in clinical use and where workflows can continue to improve.

RayWorld is RaySearch's connected approach to comprehensive cancer care. It integrates treatment planning in RayStation, workflow coordination in RayCare, and data-driven insights through RayIntelligence to enable automation, connectivity and continuous learning across oncology workflows.

More information about RaySearch's activities at the event is available [here](#).

"ASTRO is an important opportunity to show how automation, connectivity, and analytics can support clinics in delivering efficient, high-quality cancer care," says Johan Löf, founder and CEO of RaySearch Laboratories. "With RayStation, RayCare, and RayIntelligence, we are helping clinical teams move from isolated tools to integrated systems that make advanced treatments easier to plan, coordinate, and improve over time."
