Five Instalco companies in joint biogas project

Five Instalco companies have been given a joint assignment to deliver planning and installation of electricity, heating and plumbing, and ventilation during the construction of a new biogas plant in Östersund. The customer is Purac.

The Instalco companies Sydsvenska Elanläggningar, Intec, RP Montage, Optimal ventilation and TC-Kraft have joined forces to deliver services in the project.

“The key to our receiving this assignment is that we, through long and good customer relations, have been able to present a complete solution to the customer, which was exactly what they were looking for”, says Peter Hermansson, business area manager Instalco North.

It is the municipality of Östersund that, through its company Biogas i Jämtland-Härjedalen AB, will now build a biogas plant outside Östersund. Here, food waste is to be converted into both energy and nutrition in the form of vehicle fuel and bio-fertilizer for agricultural operations.

The five Instalco companies in the project can be found within three different geographies and business areas within Instalco. The total order value for Instalco amounts to approximately SEK 22 million.

“Collaboration and cross-selling is one of the cornerstones of Instalco's business. This is a fine example of how we can collaborate with many Instalco companies with specialist expertise in the same project despite geographic spread. We use each other's knowledge and workforce in a very efficient way in this case”, says Peter Hermansson.

The project has recently started and will be completed at the beginning of 2025.
