Gränges Shanghai achieves ASI Chain of Custody certification

Gränges Shanghai has successfully achieved certification against the Aluminium Stewardship Initiative Chain of Custody (CoC) Standard. This is Gränges' second CoC Standard certification and an important step in the company's sustainability agenda and commitment to develop sustainable aluminium products and solutions.

The Aluminium Stewardship Initiative (ASI) Chain of Custody Standard defines a set of requirements for the creation of a responsible supply chain for aluminium. It forms the basis for selling ASI-certified aluminium, which assures that Gränges' products are responsibly sourced and produced across the entire supply chain, from extraction of raw materials to the finished product.

– I'm very proud that we now can offer our customers ASI-certified aluminium which provides assurance to our customers and other business partners that we are strongly committed to meeting the increased demand for responsibly produced aluminium and that we promote and drive responsible and sustainable practices along the aluminium value chain, says Colin Xu, President Gränges Asia.

As of today, Gränges' production facilities in Shanghai and Finspång have achieved the ASI Performance Standard and Chain of Custody Standard certifications. The company aims to certify all production sites in accordance with the ASI sustainability certifications by 2025.

The certification was announced by ASI today, see [link](#). The independent, third-party audit of Gränges' production facility in Shanghai was carried out by DNV Business Assurance Services UK Ltd.

About ASI and the Chain of Custody Standard

ASI is a global, multi-stakeholder, non-profit standards setting and certification organization which works to maximize the contribution of aluminium to a sustainable society. The CoC Standard sets out requirements for the creation of a chain of custody for aluminium, which is produced and processed through the value chain. The implementation of ASI's CoC Standard enables a link between verified practices at successive steps of the supply chain under the ASI Performance Standard, to the products produced by ASI certified entities. For more information, see [link](#).

About Gränges

Gränges is an aluminium technology company who drives the development of lighter, smarter, and more sustainable aluminium products and solutions. The company offers advanced materials that enhance efficiency in the customers' manufacturing process and the performance of the final products. Gränges' innovative engineering has transformed the industry for more than 125 years, and the company holds leading positions in rolled products for thermal management systems, speciality packaging and selected niche applications. Gränges has production facilities and conducts sales on three continents, Asia, Europe, and Americas. The total annual production capacity amounts to 560 ktonnes. Gränges has 2,600 employees and the share is listed on Nasdaq Stockholm. More information is available at www.granges.com.
