## Soltech brings solar power to Kilenkrysset in Eskilstuna

The collaboration between Soltech Energy and the real estate company Kilenkrysset is now strengthened. Soltech's subsidiary Swede Energy will build a solar energy solution at one of Kilenkrysset's logistics properties in Eskilstuna. The tenant H&M will thus have access to solar energy from the 1,200 m<sup>2</sup> facility.

Soltech's subsidiary Swede Energy has a vast experience of installing solar energy solutions on large logistics and industrial property roofs. The building houses the central warehouse of the clothes and fashion company, H&M, tenant to real estator Kilenkrysset. The assignment applies to a roof-facility with an area of 1,200 m<sup>2</sup>.

- It feels great that Swede Energy gets the honor of installing what will be Kilenkrysset's new solar power solution. We already have a good relation and collaboration, which is now being strengthened. It is a property owner who clearly understands the importance of sustainable solutions and green energy in their properties, both from an economic and environmental perspective. That we also get renewed contracts shows their confidence in our way of working and is of course good proof that we do things right and create value for our customers, **says André Nylén, Regional Manager at Swede Energy.**

### The third solar energy solution with Kilenkrysset

It's not the first time the companies have collaborated. Swede Energy has previously built a solar energy solution for Kilenkrysset on the property Örnäs 1: 9 in Upplands-Bro, with tenant Ramirent and currently another plant is being built on a property in Jordbro, for future tenant Nybergs Deli. The solar cell plant in Eskilstuna will, when completed, produce and supply H&M with green energy.

- We are really looking forward to being able to continue making climate investments by increasing the use of green energy. The installation of the solar cell plant creates good conditions for our tenants and gives them the possibility to grow in a sustainable way. Kilenkrysset's aim is to be a positive actor when it comes to green development solutions, and we are convinced that solar energy is the way forward for large property owners. In addition, it is extra fun to be able to continue the good collaboration we have built up together with Swede Energy, **says Per Heikman, Head of Administration at Kilenkryset.**
