

# Energy Audit Drives Action as Swedish Manufacturer Targets Efficiency and Sustainability

**As part of its sustainability efforts, a Swedish industrial company has conducted a comprehensive energy analysis of its compressed air system in collaboration with Enersize. The results reveal significant potential for increased efficiency, energy savings, and reduced climate impact.**

In a feasibility study carried out by Enersize, the energy usage, operational reliability, and improvement potential of the compressed air system were thoroughly analyzed. The assessment identified several concrete measures that could reduce energy consumption by up to 21%, equivalent to a reduction of 267 tons of CO<sub>2</sub> emissions over five years.

Thanks to the findings from the feasibility study, the customer has decided to move forward with basic engineering as a foundation for an investment proposal for a new, modern, and energy-efficient compressor solution.

"It's always rewarding when our customers want to leverage our expertise and independent perspective in evaluating modernizations and rebuilds of their compressed air systems. This enables us to contribute maximum value through data-driven decisions and objective comparisons," says Fredrik Arrigucci, CEO of Enersize.

The customer has expressed high satisfaction with both the approach and the decision-making material produced, which now forms the basis for continued planning.

## **The proposed solution includes, among other things:**

- Two VSD compressors with a capacity of up to 40 m<sup>3</sup>/min
- Full redundancy for increased operational reliability
- Heat recovery potential of up to 567,000 kWh per year

The total estimated energy savings amount to approximately 1 million kWh over a five-year period.

## About Enersize

---

Enersize develops and provides specialized software, tools, and services for improving energy efficiency in industrial compressed air systems – one of the most energy-intensive processes in manufacturing. The company's technology platform enables detailed monitoring, analysis, and real-time optimization of compressed air systems, with the aim of reducing energy consumption, detecting leaks, and improving operational performance.

Enersize works with a wide range of industrial companies that recognize energy efficiency as a strategic priority – both for improving financial performance and for reducing environmental impact. The solutions are scalable and designed to integrate seamlessly into both existing and new system environments.

The company is listed on Nasdaq Stockholm First North Growth Market under the ticker: ENERS.
