Solar facade, solar roof and panel discussions: Soltech at the world exhibition Expo 2020

Sweden's pavilion at the world exhibition Expo 2020 in Dubai now receives lots of green energy from the solar cell façade and the solar roof installed by Soltech Energy on the pavilion. CEO Stefan Ölander talks about Soltech's participation during the world exhibition and about the panel discussion together with the Swedish innovation companies Ferroamp and Nilar on Saturday 6/11.

Participation in the world exhibition "Connecting Minds - Creating The Future" in Dubai is the Swedish government's single largest investment in export and investment promotion and was launched on 1 October this year.

Soltech Energy contributes to the Swedish pavilion with an integrated solar cell facade of 500 sqm and an equally large integrated solar roof that converts the sun's rays into green electricity. Soltech's partners, Nilar and Ferroamp, then assist with their solutions for storage and energy optimization of the green electricity.

Panel discussion

On Saturday 6/11 at 13.00 (CEST), 16.00 local time in Dubai (GM + 4) Soltech together with Ferroamp and Nilar arranges a panel discussion on how we create the smart energy use of the future.

During the panel discussion, the three Swedish innovation companies tell how property owners and community developers can become part of the solution for the smart electricity system of the future and contribute to the green transition. The discussion is moderated by Ann-Sofi Gaverstedt, Managing Director at Urban Systems and is also broadcasted digitally.

– It is very fun and important that Expo 2020 is now underway. The world exhibition emphasizes the importance of collaboration to create a sustainable future, something that is not least embodied by our green energy solutions that create, optimize and store energy for the pavilion. I'm looking forward to exciting days and an interesting panel discussion where we, together with Nilar and Ferroamp, help society navigate towards the green transition, **says Stefan Ölander, CEO of Soltech Energy.**
