

Freemelt receives order for Freemelt ONE from a German industrial company

Freemelt has signed an agreement with a leading global industrial company based in Germany to rent a Freemelt ONE machine. This marks the first delivery of a Freemelt ONE to an industrial customer in Germany and represents a significant milestone in establishing Freemelt's presence in the German market. The order is valued at approximately SEK 2.7 million, with delivery scheduled for the third quarter of 2025.

The customer will use the machine to accelerate applied research and development efforts, particularly in prototyping and the advancement of metal alloys. The open architecture of the Freemelt ONE allows for extensive process customization, fostering innovation and flexibility.

Freemelt has several Freemelt ONE machines in operation at German universities and research institutes. This marks the first machine ordered by a German industrial user. Given that the German industry is one of the largest globally, this order is important for Freemelt as it underscores the relevance of Freemelt's technology for high-performance applications.

About Us

Freemelt develops advanced 3D printers for metal components and aims to become the leading supplier in additive manufacturing (AM) using E-PBF technology, targeting SEK 1 billion in revenue by 2030. The solutions primarily support companies in the defense, energy, and medical technology sectors in Europe and the USA, enabling them to drive innovation and improve production efficiency. Founded in 2017, Freemelt has expanded its product portfolio to include three printer models, with two designed for industrial production and one (Freemelt ONE) targeting research institutes and universities. The modular industrial printers (eMELT) leverage E-PBF technology, delivering significantly higher efficiency compared to other machines on the market while maintaining flexibility in metal selection.

Freemelt generates revenue primarily through the sale of advanced 3D printers at fixed prices, complemented by support and maintenance services, which are expected to account for 25% of total revenue by 2030.

The company is now focused on further industrializing its product and service portfolio and driving commercialization in the European and North American markets. Read more at www.freemelt.com
