

Codemill and Hiscale partner to revolutionize Live-to-VOD workflows for sports and live event

New integration delivers an intuitive, best-of-breed live ingest and logging solution, positioning Codemill to enter the live broadcast market.

Umeå, Sweden — April 1st 2026 — Codemill AB (Nasdaq: CDMIL) today announced a strategic partnership with cloud media processing pioneer Hiscale to revolutionize Live-to-VOD workflows for the broadcasting industry. By seamlessly integrating Hiscale's FLICS service with Codemill's Cantemo MAM and Accurate.Video applications, the new live-ingest-and-logging solution simultaneously records live media while generating instantly accessible proxies and live streams. This completely eliminates traditional post-production bottlenecks, allowing media teams to begin logging, editing, and distributing content the moment the cameras start rolling.

For sports broadcasters and live event producers, this integration delivers game-changing agility and improved efficiency opportunities. Whether managing a high-stakes sports match, or a live music festival, customers can leverage this elastic, cloud-native workflow to rapidly scale operations, efficiently curate content, and dramatically accelerate delivery to global audiences, in streaming or social media.

Strategically, this "best-of-breed" collaboration positions Codemill to capture high-value contracts by offering a powerful, user-centric alternative to the expensive, engineering-heavy legacy systems that have long dominated the live broadcast market. "We are providing major franchises and broadcasters with an elegant, highly agile solution," says Maria Hellström, Codemill CEO.

Codemill will showcase this live-ingest-and-logging solution, together with the next version of Accurate.Video at the NAB Show 2026. Please book a meeting and visit Codemill's booth W2724 during April 19-22, 2026.

About Hiscale

Hiscale is a technology company specializing in responsive media processing and delivery, offering software solutions and products for the Media and Entertainment industry. Hiscale FLICS is a transcoding and workflow orchestration engine built for elastic scaling. It powers the world's leading broadcast, live ingest, VOD/OTT, and complex Content Supply Chain workflows. The Hiscale Agent extends these capabilities as a free ingest application for distributed and remote media operations.

Hiscale's clients and strategic partners include major public broadcasters such as Rundfunk Berlin-Brandenburg (rbb), managed cloud providers such as Base Media Cloud, as well as various global media production and telecommunications organizations.

The company is privately held and headquartered in Germany. The Company operates globally through a network of strategic integration partners.
