

Tamtron has launched next generation excavator scale

Tamtron Group Plc | Press Release | April 07, 2025 at 15:00:00 EEST

Tamtron has introduced a new excavator scale to the market, designed to meet the growing demands of the construction and earthmoving industries through more efficient and accurate material management. This next generation weighing technology is engineered to improve productivity, reduce errors, and support smooth operations across all types of job sites. The product was officially launched at Bauma 2025 in Munich, at Tamtron's stand on Monday, April 7 at 1:30 PM.

The excavator scale enables weighing during loading, significantly streamlining work processes and minimizing unnecessary interruptions. Compatible with all excavator brands, the scale features a modern, user-friendly interface that ensures smooth and error-free operation. In addition, the device is equipped with internet connectivity, allowing cloud-based reporting and Tamtron's remote service and support.

"We are excited to introduce this innovation at Bauma 2025, the leading event for the construction and mining industries. Our new excavator scale meets the high demands of industry professionals, delivering exceptional precision, efficiency, and performance. Our goal is to develop solutions that help our customers improve productivity and optimize their operations," says **Mikko Keskinen**, CEO of Tamtron.

Tamtron's new weighing solution has been specifically developed for construction and earthmoving professionals who value reliability, efficiency, and technological leadership.
