OODA AI launches Universal AI Platform

OODA AI AB (publ) ("OODA AI" or the "Company") today announced the launch of the OODA Universal AI Platform, a platform designed to enable organizations to deploy artificial intelligence across workflows and business processes through a unified AI infrastructure.

The platform brings together AI models, applications and automated workflows within a single environment and provides access to more than 150 AI models through a unified API. The platform supports a wide range of AI capabilities including text, image, video and audio generation as well as AI avatars, assistants and autonomous AI agents.

Through the platform, organizations can build, deploy and scale AI applications and create automated workflows using a visual workflow builder. The platform also includes an integration layer with more than 70 native connectors to business systems, data sources and productivity tools.

The platform is designed for developers, enterprises and partners, with broader self-serve access planned to open in early Q2 2026.

As part of the launch, the Company is also introducing a Platform-as-a-Service (PaaS) offering enabling partners to deploy the platform as a white-label AI infrastructure for their own customers.

The platform builds on the Company's established focus on secure and verifiable AI infrastructure, including confidential compute, Trusted Execution Environments (TEE) and on-chain AI inference attestation. At the same time, the platform is being expanded to support a broader range of AI models and applications. The attestation layer is designed for verification on Base, strengthening traceability, data integrity and control in how AI models are executed and used in business-critical environments. This links the Company's earlier focus within decentralized AI infrastructure with the expanded platform.

In connection with the launch, the Company has also updated its website, www.ooda.ai, to reflect the platform's capabilities, integrations and use cases.

"The Universal AI Platform represents an important step in our strategy to build a unified infrastructure for how organizations use AI across their workflows. By bringing models, applications and automated processes together in one platform, companies can deploy and scale AI more efficiently while maintaining control over security," says Arli Charles Mujkic, CEO of OODA AI AB (publ).
