

# SMS Announces Two Major Orders at the Beginning of June

**Scandinavian Medical Solutions has had a strong start to June, having announced two sales.**

Scandinavian Medical Solutions has had a strong start to June, with the company announcing two sales to existing U.S. customers.

The first order was completed last week, when the company finalized the sale of another GE Discovery PET/CT scanner. The scanner was sourced in Asia through the company's newly expanded procurement channels, enabling efficient utilization of global sourcing opportunities. The sale has a value in the range of DKK 2.0–3.5 million.

The second order was announced this week, when Scandinavian Medical Solutions completed the sale of an MRI scanner, a highly sought-after system in the U.S. market. Prior to delivery, the scanner was upgraded in cooperation with the original equipment manufacturer, ensuring that the customer receives an updated and fully functional system. The sale has a value in the range of DKK 3.5–5.0 million.

These announced orders, both involving existing customers, highlight the company's strategic efforts to diversify and optimize its procurement channels, as well as how its local presence enables the identification of customer needs. The orders have a combined value in the range of DKK 5.0–8.5 million and do not affect the company's previously announced guidance for the 2025 /26 financial year.
